# STANDARDS BULLETIN 2004-10

---

## Third Edition of CAN/ULC-S101-04

### Standard Methods of Fire Endurance Tests of Building Construction and Materials

---

ULC is pleased to announce the publication of the Third Edition of CAN/ULC-S101-04, Standard Methods of Fire Endurance Tests of Building Construction and Materials. This Standard has been approved by the ULC Committee on Fire Tests, and has been published with the date of April 2004.

This Standard covers fire endurance tests applicable to walls, partitions, floors, roofs, ceilings, columns, beams, and girders, as well as to some components of these building sub-assemblies. It is the intent that the fire endurance period established by this test method indicates performance only during the fire exposure period and shall not be construed as having determined suitability for use after fire exposure.

This Standard will be of interest to those involved in research and development of building construction materials, fire protection experts, engineers and architects, as well as builders and manufacturers.

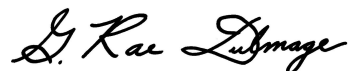

A certification Bulletin will be released shortly providing further information regarding this Standard. The Certification Bulletin will also specify the effective date for any requirements.

Should you require any additional information, please contact Jennifer Beatty at 613-755-2729 Ext. 6222 or email: [jennifer.beatty@ca.ul.com](mailto:jennifer.beatty@ca.ul.com)

This amended Standard can be ordered for \$180.00 through our website at [www.ulc.ca](http://www.ulc.ca) and selecting ULC Online Store. Once at the ULC Online Store select "Standards".

Yours truly,

UNDERWRITERS' LABORATORIES OF CANADA
