STANDARDS BULLETIN 2006-07

**Second Edition of ULC-S647-05 (Including Amendment 1)
Standard for Exhaust Cleaning and Recirculation Assemblies for
Commercial and Institutional Kitchen Exhaust Systems**

ULC is pleased to announce the publication of the Second Edition of ULC-S647-05 (Including Amendment 1), Standard for Exhaust Cleaning and Recirculation Assemblies for Commercial and Institutional Kitchen Exhaust Systems. This Standard has been approved by the ULC Committee on Kitchen Exhaust Equipment and Systems, and has been published with the date of July 2006.

ULC-S647-05 (Including Amendment 1) will be of interest to anyone who operates or specifies commercial or institutional kitchens. This Standard applies to exhaust cleaning assemblies intended primarily for use with exhaust systems for commercial and institutional type cooking equipment such as ranges, broilers, deep fat fryers, grills, etc... that are Gas-Fuelled and/or Electronically-Fuelled. This Standard also applies to exhaust recirculation units that are for connection to the outlet from air cleaning assemblies and are intended to temper make-up air by recycling up to 80% of the clean exhaust air to the kitchen area.

The purpose of the Amendment to ULC-S647, concerns the grease dispensation rate. In order to more accurately represent restaurant cooking conditions, the grease rate has been reduced. As the percentage of grease removed is the basis for acceptance of a filtration device, a finer mist, with smaller particle size, is judged to represent a more severe condition.

A Certification Bulletin will be released shortly providing further information regarding this Standard. The Certification Bulletin will also specify the effective date for any requirements.
