

CORRELATION OF USE MARKING AND NEW PRODUCT IDENTITY TEXT

The Product Identity of the Listing Mark for products in this file has been revised with the transition to the new Product Identity to be completed by December 31, 2008. In conjunction with the implementation of the new Type R Listing Mark Product Identity covered on the new Listing Mark Data Page(s), which have been added to this File, it is required that the use marking described below is employed on *each model* at the time the new Type R Marks are introduced. The products are eligible to use the previous Listing Mark Product Identity until December 31, 2008.

Each unit shall be marked with the applicable use marking indicated in the table below followed by the specific use description covered in the description section for the unit.

The following table correlates the new required use marking with the product identity (Listing Mark text) of the previous Type R Listing Mark. If more than one product identity was previously applicable, the new use marking texts shall be combined (See below for examples).

CCN	Previous Product Identity for Type R label Text	New Product Identity for Type R Listing Mark	New Required Use Marking Examples
AMQV / AMQV7	Product, identified by the specific product name or designation as shown in the individual Listings	"Equipment"	Product identity as included in the description section for the unit. Examples: Commercial Magnetically Actuated Switch Commercial Addressable Contacts, etc.
