

CORRELATION OF USE MARKING AND NEW PRODUCT IDENTITY TEXT

The Product Identity of the Listing Mark for products in this file has been revised with the transition to the new Product Identity to be completed by December 31, 2008. In conjunction with the implementation of the new Type R Listing Mark Product Identity covered on the new Listing Mark Data Page(s), which have been added to this File, it is required that the use marking described below is employed on *each model* at the time the new Type R Marks are introduced. The products are eligible to use the previous Listing Mark Product Identity until December 31, 2008.

Each control unit shall be marked with the use marking indicated in the table below. Where the product is comprised entirely of labeled subassemblies, the use marking is to be applied to a subassembly used exclusively for the product and employed in every installation. [The subassembly that employs all the required marking is identified in the marking portion of the description section for the product.] Use marking is not required for the remaining labeled subassemblies.

The following table correlates the new required use marking with the product identity (Listing Mark text) of the previous Type R Listing Mark. If more than one product identity was previously applicable, the new use marking texts shall be combined.

CCN	Previous Product Identity for Type R label Text	New Product Identity for Type R Listing Mark	New Required Use Marking
FSYE	"EMERGENCY SIGNALING EQUIPMENT ACCESSORY"	"Emergency Signaling Equipment"	Specific use marking (i.e. Type UM, Type SM, Type AM, accessory, transponder, transmitter, etc.) included in description section for unit.
FSYE	"EMERGENCY SIGNALING EQUIPMENT ACCESSORY SUBASSEMBLY", "EMERGENCY SIGNALING EQUIPMENT ACCESSORY ENCLOSURE", or "EMERGENCY SIGNALING EQUIPMENT ACCESSORY ENCLOSURE PART".	"Emergency Signaling Subassembly"	None, except when key subassembly as noted below. Key subassembly use marking will include information indicated above for the overall control unit.
