

Transit - Automated Fare Collection Modernization

For passengers, fare collection makes up only a small percentage of their travel time, but it significantly impacts their overall experience. As ride-sharing and other alternative services are rising, public transportation authorities must proactively work to attract and maintain their customer base by improving ticketing and payment systems.

The UL AFC Modernization (automated fare collection) solution provides public transport operators with a secure framework for modernizing and continuously improving fare collection systems. From concept all the way to implementation and launch, UL ensures system quality while reducing time to market.

Key Benefits

- Efficiency
- Reduced operating costs
- Better customer experience
- Increased revenue generation
- Improved safety & security

The UL AFC Modernization Solution Enables you to:

Innovate Securely by building trusted ticketing solutions and new interconnected technologies

Guarantee Compliance and Interoperability and beyond to build brand reputation and market access

Build Consumer Trust that drives passenger growth

Increase Efficiency to reduce costs and increase competitive advantage
