

Single Batch Certification Program:

A UL customized offering for manufacturers with limited production for North American markets

CREATED TO MEET YOUR NEEDS

Are you a manufacturer who needs to ship a limited quantity of products to North America?

UL launched a new program to give manufacturers the opportunity to ship a limited quantity of UL Certified products to North America, without the need to specify the final installation site, and without incurring the full certification process with inspections and annual fees.

The Single Batch Certification completes UL service offerings, together with our Listing program and Field Evaluations. All requirements of the Listing program need to be applied and a dedicated UL label, with a unique serial number, will be created and attached to the product.

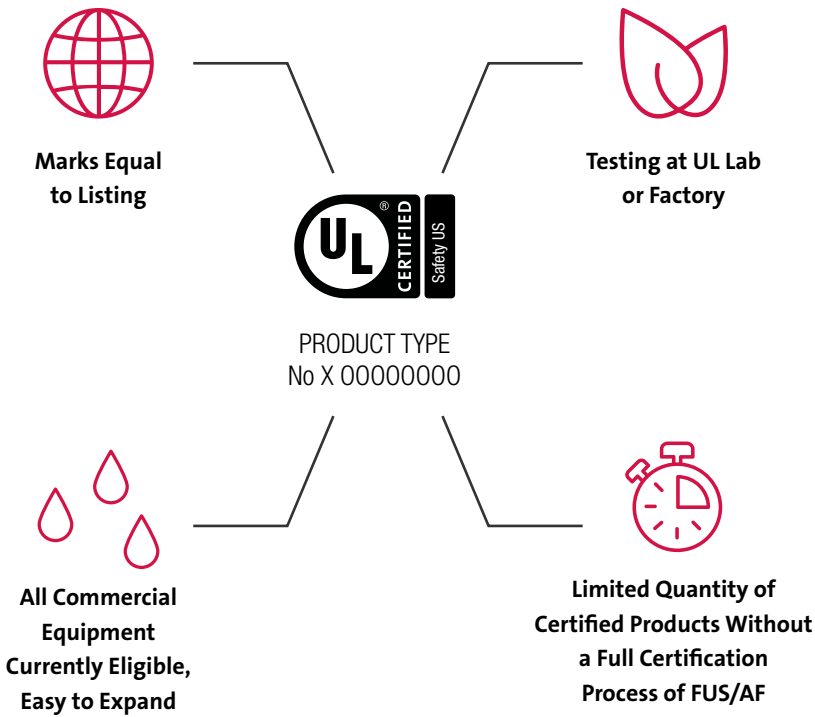

HOW IT WORKS

The Single Batch Certification is applicable to a limited batch of production in a limited timeframe.

The construction review and evaluation can be done at UL or client's facility and possible destructive testing is anticipated (depending on the category and technical requirements).

The product complies with the applicable requirements, UL will witness the UL Mark being applied for the whole batch to confirm that the products eligible to bear the UL Mark are representative of the samples evaluated, tested, and certified.

BENEFITS

- Perfect fit for customized equipment
- No inspections or annual fees
- Satisfies the requirements of the local authorities
- No need to specify the final installation site

A FULL PORTFOLIO FOR NORTH AMERICAN ACCESS: CHOOSE THE BEST OPTION FOR YOUR NEEDS

Service	Evaluation	Characteristics	Requirements	Result	FUS
Listing or full certification Program	At Factory or at suitable laboratory	As long as product does not change, listing is ongoing and cost spread across many units. Suitable for ongoing production of the same product for long periods of time.	As defined by Guide Cards and compliance to applicable standard	UL Listing mark	YES
Single Batch Certification	At Factory or at UL laboratory	Providing a UL mark at the factory on limited number of units, without establishing a Follow-Up Service. All construction requirements and testing described by the appropriate standard, need to applied, including eventual destructive testing.	As defined by Guide Cards and compliance to applicable standard	UL Listing mark with unique serial number	NO
Field Evaluation	At Factory, distribution point or elsewhere in supply chain. For US final evaluation normally at final installation site	Strong collaboration with local AHJ. Flexibility in requirements. Evaluation is equipment specific and site specific and requirements tailored to site location and actual application	Flexible, while base standard is referenced final requirement may use applicable parts from other standards.	Field evaluation mark	NO
