GUIDE INFORMATION
FOR ELECTRICAL EQUIPMENT
THE WHITE BOOK
2015-16

UL PRODUCT CATEGORIES CORRELATED TO THE
2011 AND 2014 NATIONAL ELECTRICAL CODE®

To access the White Book information in a web compliance tool, try UL Produce Spec at www.ul.com/productspec and save it to your home screen or bookmark it.

Corporate Headquarters

333 Pfingsten Rd.
Northbrook,
IL 60062-2096
Phone: +1.847.272.8800
Phone: Customer Service: +1.877.UL.HELPS (1.877.854.3577)
E-mail: cec.us@us.ul.com

(For a list of UL Worldwide locations, please visit: http://ul.com/global/eng/pages/corporate/contactus/.)

Founded in 1894, UL is dedicated to working for a safer world. UL operates facilities throughout the world for the testing, certification and quality assessment of products, systems and services. With an unwavering commitment to public safety and societal well-being, UL provides the highest level of conformity assessment services to its global clients.

# Guide Information for Electrical Equipment

## THE WHITE BOOK

### Table of Contents

**Introduction**

- Look for the UL Mark
- Identification of UL Listed and Classified Products ..................................................... 37

**UL Certification Services and Marks**

- UL Certification Mark ........................................................................................................ 38
- Listing Service ...................................................................................................................... 38
- Classification Service .......................................................................................................... 39
- Component Recognition Service ...................................................................................... 39

**Field Evaluation Service** ................................................................................................. 40

**Field Inspection Service** .................................................................................................. 40

**Installation and Use of Products Bearing the UL Mark** .................................................. 41

**Practical Application of the White Book in the Field** ..................................................... 42

**Anatomy of the Enhanced UL Certification Mark** ............................................................ 44

**Field Modifications** ........................................................................................................ 46

**Field Labeling** .................................................................................................................. 46

**CE Marking Information** ................................................................................................ 46

**Over 600 Volts Rated Equipment and Devices Category List** ....................................... 34

**Distributed Power Generation Equipment Category List** ............................................. 35

**Light Emitting Diode (LED) Category List** .................................................................... 36

### Indexes:

- Index of UL Product Categories Correlated to the 2014 NEC® ........................................ 627
- Index of UL Product Categories Correlated to the 2011 NEC® ........................................ 676

**Appendix A - UL Marking and Application Guides** ..................................................... 729
- Dead-Front Switchboards ................................................................................................... 731
- Electrical Heating and Cooling Equipment ....................................................................... 757
- Luminaries .......................................................................................................................... 789
- Molded Case Circuit Breakers ............................................................................................ 825
- Panelboards ....................................................................................................................... 851
- Swimming Pool Equipment, Spas, Fountains and Hydromassage Bathtubs ................. 883
- Wire and Cable .................................................................................................................... 917
- Alternative Energy Equipment and Systems .................................................................... 947
- Lighting Protection Application Guide ............................................................................. 975
- Green Construction Application Guide ............................................................................ 999

**Appendix B - Online Certifications Directory Quick Guide** ......................................... 1035

**Appendix C - Index of Product Categories and Industry Terms** .................................. 1045

**Membership Application for international Association of Electrical Inspectors** (IAEI) .......................................................... 1121
Other UL Services

Specialized Services .............................................................................................................. 722
  Local Engineering Services
  Fact-finding Investigations
  Research Services
  Verification Services — Commercial Inspection, Testing and Auditing

Arc-detection and -Mitigation Equipment (AVWD) ................................................................. 75
Arc-mitigation Equipment (AVWP) .......................................................................................... 75

**Arc-fault Circuit Interrupters (AVYI)** .............................................................................. 75
Arc-fault Circuit Interrupters, Branch/Feeder Type (AVZQ) .................................................. 76
Arc-fault Circuit Interrupters, Combination Type (AWAH) ...................................................... 76
Arc-fault Circuit Interrupters, Cord Type (AWAY) ................................................................... 77
Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ) ........................................ 77
Arc-fault Circuit Interrupters, Outlet Branch Circuit Type for Use in System Combination Arc-fault Circuit Protection (AWCC) .......................................................... 78
Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG) ................................................... 78
Arc-fault Circuit Interrupters, Portable Type (AWDO) ............................................................ 79

**Architectural and Floating Fountains (AWEG)** ............................................................... 79

**Armored Cable (AWEZ)** .................................................................................................. 79
Armored Cable Connectors, Type AC (AWSX) ........................................................................ 80

**Attachment Plugs (AXGV)** ............................................................................................. 80
Attachment Plugs, Fuseless (AXUT) ...................................................................................... 81
Attachment Plugs with Switches (AYIR) ................................................................................ 82
Attachment Plugs with Overload Protection (AYVZ) .............................................................. 82

**Audio and Radio Equipment, Commercial (AZCY)** ........................................................... 83
Commercial Audio and Radio Equipment, Systems and Accessories (AZJX) ............. 83

**Audio/Video Apparatus (AZSQ)** ...................................................................................... 83

**Audio and Video Equipment (AZUJ)** ............................................................................. 84
Audio and Video Equipment Certified for Use in Specified Equipment (AZVG) ............... 85

**Automotive Lift and Suspension Equipment (BAAC)** ...................................................... 86
Automotive Lifts (BACL) ......................................................................................................... 86

**Bank Equipment (BALT)** .................................................................................................. 86

**Lubricant-dispensing Equipment for Use in Hazardous Locations (BAYZ)** .............. 86

**Batteries for Use in Electric Vehicles (BBAS)** ................................................................. 87

**Batteries for Use in Light Electric Rail and Stationary Applications (BBFX)** .......... 87

**Battery Chargers for Engine-driven Emergency and Standby Power System Generators (BBHH)** .......................................................... 88

**Battery-powered Portable Land Mobile Radio Equipment for Use in Hazardous Locations (BBRX)** .......................................................... 88

**Boat Cable (BDFX)** ........................................................................................................... 88

**Boilers, Electric (BDJS)** .................................................................................................. 89

**Boxes, Enclosures, Handholes and Vaults, Underground, Utility Specification (BGHL)** ........................................................................................................... 89

**Boxes, Junction and Pull (BGUZ)** .................................................................................... 90

**Outlet and Junction Boxes for Use in Zone Classified Hazardous Locations (BGYM)** ........................................................................................................................................ 91

**Brakes, Electric for Use in Hazardous Locations (BHIX)** ............................................... 91

**Building Materials (BHWV)** ........................................................................................... 92
Discrete Products Installed in Air-handling Spaces (BHZF) ................................................... 92

**Fire-resistance Ratings (BXRH)** ....................................................................................... 92
Fire-resistance Ratings - ANSI/UL 263 (BXUV) ................................................................. 93
### Ceiling Dampers (CABS)

Ceiling Dampers (CABS) ................................................................. 105

### Luminaires, Luminaire Assemblies and Luminaire Enclosures Certified for Fire Resistance (CDHW)

Luminaires, Luminaire Assemblies and Luminaire Enclosures Certified for Fire Resistance (CDHW) ................................................................. 105

### Outlet Boxes and Fittings Certified for Fire Resistance (CEYY)

Outlet Boxes and Fittings Certified for Fire Resistance (CEYY) ................................................................. 106

### Speaker Assemblies for Fire Resistance (CHML)

Speaker Assemblies for Fire Resistance (CHML) ................................................................. 107

### Wall-opening Protective Materials (CLIV)

Wall-opening Protective Materials (CLIV) ................................................................. 107

### Busways, Metal Enclosed, Over 600 Volts (CVZW)

Busways, Metal Enclosed, Over 600 Volts (CVZW) ................................................................. 108

### Busways and Associated Fittings (CWFT)

Busways and Associated Fittings (CWFT) ................................................................. 108

### Busways and Associated Fittings Certified to IEC Publications (CWTN)

Busways and Associated Fittings Certified to IEC Publications (CWTN) ................................................................. 109

### Cabinets and Cutout Boxes (CYIV)

Cabinets and Cutout Boxes (CYIV) ................................................................. 109

### Cable Assemblies and Fittings for Industrial Control and Signal Distribution (CYJV)

Cable Assemblies and Fittings for Industrial Control and Signal Distribution (CYJV) ................................................................. 110

### Cable Assemblies for Industrial Control and Signal Distribution for Use in Hazardous Locations (CYJX)

Cable Assemblies for Industrial Control and Signal Distribution for Use in Hazardous Locations (CYJX) ................................................................. 110

### Cable Assemblies for Industrial Control and Signal Distribution for Use in Zone Classified Hazardous Locations (CYJZ)

Cable Assemblies for Industrial Control and Signal Distribution for Use in Zone Classified Hazardous Locations (CYJZ) ................................................................. 111

### Cable Fittings for Use in Zone Classified Hazardous Locations (CYMJ)

Cable Fittings for Use in Zone Classified Hazardous Locations (CYMJ) ................................................................. 112

### Cable Sealing Fittings for Use in Hazardous Locations (CYMX)

Cable Sealing Fittings for Use in Hazardous Locations (CYMX) ................................................................. 112

### Cable Trays (CYNW)

Cable Trays (CYNW) ................................................................. 113

### Cable Trays, Nonmetallic (CYOV)

Cable Trays, Nonmetallic (CYOV) ................................................................. 113

### Camera Equipment for Use in Zone Classified Hazardous Locations (CYPB)

Camera Equipment for Use in Zone Classified Hazardous Locations (CYPB) ................................................................. 113

### Camera Equipment for Use in Hazardous Locations (CYPH)

Camera Equipment for Use in Hazardous Locations (CYPH) ................................................................. 114

### Capacitors (CYWT)

Capacitors (CYWT) ................................................................. 114

### Carbon Monoxide Alarms, Single and Multiple Station (CZHF)

Carbon Monoxide Alarms, Single and Multiple Station (CZHF) ................................................................. 114

### Casters, Rubber, Electrically Conductive, Relating to Hazardous Locations (CZXZ)

Casters, Rubber, Electrically Conductive, Relating to Hazardous Locations (CZXZ) ................................................................. 115

### Centrifuges for Use in Hazardous Locations (DAZV)

Centrifuges for Use in Hazardous Locations (DAZV) ................................................................. 115

### Motor-operated Check-out Stands (DBNT)

Motor-operated Check-out Stands (DBNT) ................................................................. 116

### Seasonal and Holiday Decorative Products (DGVT)

Seasonal and Holiday Decorative Products (DGVT) ................................................................. 116

### Seasonal and Holiday Decorative Product Accessories (DGWU)

Seasonal and Holiday Decorative Product Accessories (DGWU) ................................................................. 116

### Electric Ornaments (DGXC)

Electric Ornaments (DGXC) ................................................................. 116

### Lamps, Decorative (DGXO)

Lamps, Decorative (DGXO) ................................................................. 117

### Outfits, Decorative (DGXW)

Outfits, Decorative (DGXW) ................................................................. 117

### Strings, Decorative Lighting (DGZZ)

Strings, Decorative Lighting (DGZZ) ................................................................. 117

### Circuit Breakers (DHJR)

Circuit Breakers (DHJR) ................................................................. 118

### Adapters, Circuit Breaker (DHWZ)

Adapters, Circuit Breaker (DHWZ) ................................................................. 118

### Circuit-breaker Accessories (DIHS)

Circuit-breaker Accessories (DIHS) ................................................................. 118

### Circuit Breakers and Surge-protective Devices (DIMV)

Circuit Breakers and Surge-protective Devices (DIMV) ................................................................. 119

### Circuit-breaker High-fault Protectors and High-fault Modules (DIRW)

Circuit-breaker High-fault Protectors and High-fault Modules (DIRW) ................................................................. 119

### Circuit Breakers for Use in Communications Equipment (DITT)

Circuit Breakers for Use in Communications Equipment (DITT) ................................................................. 120

### Circuit-breaker Accessories for Use in Communications Equipment (DITX)

Circuit-breaker Accessories for Use in Communications Equipment (DITX) ................................................................. 120

### Circuit Breakers, Molded Case and Circuit-breaker Enclosures for Use in Photovoltaic Systems (DIUR)

Circuit Breakers, Molded Case and Circuit-breaker Enclosures for Use in Photovoltaic Systems (DIUR) ................................................................. 120

### Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ)

Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) ................................................................. 121
Circuit Breakers, Molded Case, Classified for Use in Specified Equipment (DIXF) .......................................................... 123
Circuit Breakers, Molded-case Circuit Breakers and Molded-case Switches for Use in Wind Turbines (DIXM) .......................................................... 123
Circuit Breakers with Equipment Ground-fault Protection (DIYA) ......................... 124
Circuit Breakers with Ground-fault Circuit Interrupter and Combination-type Arc-fault Circuit Interrupter Protection (DIYG) ........................................... 124
Fused Circuit Breakers (DIYV) .............................................................................. 125
Circuit Breaker and Ground-fault Circuit Interrupters (DKUY) ............................... 125
Commercial Off-the-Shelf Molded-case Circuit Breakers for Use on Non-Nuclear U.S. Naval Combatant Ships (DKWA) .......................................................... 125
Commercial Off-the-Shelf Molded-case Circuit-breaker Accessories for Use on Non-Nuclear U.S. Naval Combatant Ships (DKWE) ........................................... 126

Circuit Breakers for Use in Hazardous Locations (DKAR) .................................... 126
  Branch Circuit and Service Circuit Breakers for Use in Hazardous Locations (DKNZ) .......................................................... 127

Circuit Breakers for Use in Zone Classified Hazardous Locations (DKPA) .......... 127
  Branch Circuit and Service Circuit Breakers for Use in Zone Classified Hazardous Locations (DKPN) .......................................................... 127

Circuit Breakers and Metal-clad Switchgear Over 1000 Volts (DLAH) ................. 127
  Circuit Breakers, Medium Voltage, Certified for Use in Specified Equipment (DLBC) .......................................................... 129
  Circuit-breaker Switchgear, Metal Enclosed, Over 1000 Volts (DLBK) ............ 129

Circuit Protectors (DLBX) ...................................................................................... 131

Class 2 and Communication Cable Management Systems (DLPV) ..................... 131

Cleaning Machines (DMDT) ................................................................................. 131
  Cleaning Machines, Motor Operated (DMGK) ..................................................... 132
  Dishwashers, Commercial (DMGR) ...................................................................... 132
  Dishwashers, Household (DMIY) .......................................................................... 132
  High-pressure Cleaning Machines, Electrically Operated (DMKK) ................... 133
  Vacuum Cleaning Machines and Blower Cleaners (DMLW) ........................... 133

Cleaning Machines for Use in Hazardous Locations (DMRR) ............................ 134

Coaxial Fault Protectors for Network-powered Broadband Communication Systems (DUAA) .......................................................... 134

Cold Cathode Transformers and Power Supplies (DUEC) ..................................... 134

Combustion-detection Equipment for Use in Hazardous Locations (DUFK) ........ 135

Combustion-detection Equipment for Use in Zone Classified Hazardous Locations (DUFQ) .......................................................... 135

Communication, Coaxial and Broadband Cable Assemblies (DUNH) .................. 136

Communications-, Audio/Video-, Data- and Other Signaling-circuit Accessories (DUXR) .......................................................... 136

Communications Service Equipment (DUZO) ..................................................... 137

Communications Cable (DUZX) .......................................................................... 138

Communications CableVerified in Accordance with National or International Specifications (DVBG) .......................................................... 139
  Local Area Network Cable Verified for Transmission Performance in Accordance with National or International Specifications (DVBI) ........................................... 139

Community Antenna Television Cable (DVCS) .................................................... 140
Computer Interconnection Cable Assemblies (DVPJ) .................................................. 140
Conductor Termination Compounds (DVYW) ................................................................ 141

Conduit and Fittings (DWFV) ....................................................................................... 141
Conduit and Cable Hardware (DWMU) ........................................................................... 141
Conduit Fittings (DWTT) .............................................................................................. 141
  Retrofit Fitting Kits Certified for Use with Extruded Rigid PVC Conduit (DWUC) ................................................................. 143
Flexible Conduit, Liquid-tight (DWWY) ........................................................................ 143
  Flexible Metal Conduit Assemblies, Liquid-tight (DXAS) ........................................ 143
  Flexible Metal Conduit, Liquid-tight (DXHR) .......................................................... 143
  Flexible Nonmetallic Conduit, Liquid-tight (DVOQ) .................................................. 144
Flexible Metal Conduit (DXUZ) ....................................................................................... 144
Intermediate Ferrous Metal Conduit (DYBY) ................................................................ 145
Rigid Ferrous Metal Conduit (DYIX) .............................................................................. 145
Rigid Ferrous Metal Conduit with Polyvinyl Chloride Coating Verified for PVC Adhesion Performance (DYJC) ................................................................. 146
Rigid Nonferrous Metallic Conduit (DYZW) ................................................................ 146
Reinforced Thermosetting Resin Conduit (DZKT) ......................................................... 146
Rigid Nonmetallic Cellular Core Schedule 40 and Schedule 80 PVC Conduit (DZLR) .............................................................................. 147
Rigid Nonmetallic PVC Conduit (DZYR) ........................................................................ 147
Rigid Nonmetallic High-density-polyethylene Underground Conduit (EAZX) .......... 148

Conduit Fittings for Use in Zone Classified Hazardous Locations (EBMB) ................. 148
Conduit Fittings for Use in Hazardous Locations (EBNV) .............................................. 149

Connectors, Special Purpose (ECIS) ............................................................................ 150
Containment Products for Flammable and Combustible Liquids (ECPR) .................... 150
Fixed and Stationary Storage Tanks (EDQX) ................................................................ 151
  Aboveground Flammable-liquid Tanks (EEEV) ......................................................... 151
  Protected Aboveground Tanks for Flammable and Combustible Liquids (EELU) ...................................................................... 152
  Fire-resistant Tanks for Flammable and Combustible Liquids (EEZI) ..................... 152
  Special-purpose Tanks (EFVT) .................................................................................. 153
  Underground Tank Lining Systems (EGAY) ............................................................... 154
  Underground Tanks (EGHX) .................................................................................. 155
  Underground Tank Upgrade Systems (EGSJ) ........................................................... 156
  Below-grade Vaults for Flammable-liquid Storage Tanks (EHOJ) ................................ 157

Control Dampers (EIMZ) .............................................................................................. 158
Conveyors (EJJR) ......................................................................................................... 158

Cord Sets and Power-supply Cords (ELBZ) ................................................................. 158
  Cord-restraint Devices (ELDW) ................................................................................ 160
  Outdoor Seasonal-use Cord-connected Wiring Devices (ELEI) ................................ 160
  Seasonal-use Cord Sets (ELEV) .............................................................................. 160
  Utility-service Cord Sets (ELFT) .............................................................................. 160

Cord Sets with Leakage-current Detection and Interruption (ELGN) ................................ 161
Corrosion-measuring Equipment for Use in Zone Classified Hazardous Locations (ELHN) ................................................................. 161
Corrosion-measuring Equipment for Use in Hazardous Locations (ELHS) ............... 162
Crane and Hoist Electrification Systems (ELPH) ......................................................... 162
Current Taps and Adapters (EMDV) ............................................................................ 162
Custom-built Kiosks (EMHH) ............................................................... 163
Dampers for Fire Barrier and Smoke Applications (EMME) ................. 163
Data Processing Cable (EMRB) .................................................................. 165
Data Processing Equipment, Electronic (EMRT) ........................................... 165
Electric Signs Certified for Energy Efficiency to California Code of Regulations, Title 24, Part 6, Section 148 (ENVS) ................................................................. 166
Data Processing Equipment, Electronic for Use in Hazardous Locations (ENWS) ............................................................... 166
Data Processing Equipment, Electronic for Use in Zone Classified Hazardous Locations (ENYB) ............................................................... 167
Dielectric Mediums (EOUV) ........................................................................... 167
Transformer Fluids (EOVK) ......................................................................... 168
Dimmers (EOVZ) ........................................................................................... 168
Dimmers, Commercial (EOXT) ..................................................................... 168
Dimmers, General-use Switch (EOYX) ........................................................... 169
Dimmers, Theater (EPAR) ............................................................................. 169
Dimmers, Theater, Controls (EPCT) ............................................................. 170
Direct-plug-in and Cord-connected Class 2 Power Units (EPBU) ............... 170
Dispensing Devices (EPWR) ........................................................................ 171
Dispensing-device Accessories (EQJZ) .......................................................... 171
Control, Monitoring and Auxiliary Equipment (EQXX) ................................ 171
Retrofit Assemblies (ERKQ) ........................................................................... 171
Power-operated Dispensing Devices (EWFX) ............................................. 172
Flammable Liquid Dispensing Devices, Power Operated (EWTV) ............ 172
LP-Gas Dispensing Devices, Power Operated (EXHT) .............................. 172
Commercial Lamp Disposal Systems (EUQ) ................................................. 173
Distributed Generation Power Systems Equipment for Use in Hazardous Locations (FCHD) ............................................................... 173
Photovoltaic Charge Controllers for Use in Hazardous Locations (FCJC) ...... 173
Photovoltaic Modules and Panels for Use in Hazardous Locations (FCJU) ...... 173
Distribution Equipment, Rack Mounted (FCKA) ......................................... 174
Door Operators for Use in Hazardous Locations (FCQU) ............................. 175
Door, Drapery, Gate, Louver and Window Operators and Systems (FDDR) .... 175
Door Holders for Use in Hazardous Locations (FDGF) ............................... 176
Door Panel Assemblies (FDIT) ....................................................................... 176
Drilling Equipment for Use in Zone Classified Hazardous Locations (FDJJ) .... 176
Drilling Instrumentation and Control for Use in Zone Classified Hazardous Locations (FDJN) ............................................................... 176
Marine Shipboard Cable Fittings for Use in Zone Classified Hazardous Locations (FDJR) ............................................................... 177
Drilling Equipment for Use in Hazardous Locations (FDJZ) ....................... 177
Drilling Instrumentation and Control for Use in Hazardous Locations (FDKX) ... 177
Marine Shipboard Cable Sealing Fittings for Use in Hazardous Locations (FDLW) ............................................................... 178
Earthquake-actuated Equipment (FFPC) ....................................................... 178
Earthquake-actuated Shutoff Systems (FFPH) .............................................. 178

Exit Sign Retrofit Kits (GGET) ................................................................. 211
Introduction

The White Book contains the General Guide Information for UL’s Electrical Construction Equipment and Hazardous Locations Equipment product categories. In addition, General Guide Information for selected Electrical Appliance and Utilization Equipment; Fire Protection, Fire Resistance and Building Materials Equipment; Heating, Cooling, Ventilating and Cooking Equipment; Mechanical Equipment and Associated Products; Flammable and Combustible Liquids and Gases Equipment; and Plumbing and Associated Products categories is also included in the White Book. Attention is directed specifically to the General Guide Information following the product category headings that describe limitations of the Certifications, such as current, voltage and horsepower and installation provisions. The scope and sizes and ratings specified in the General Guide Information is intended to indicate the current range of Certifications, and is not necessarily indicative of the limitations for Certification.

The White Book includes ten UL Marking and Application Guides. UL developed these Guides to assist Authorities Having Jurisdiction (AHJs) and installers in understanding the meanings and locations of markings associated with switchboards, panelboards, circuit breakers, luminaires, swimming pools and spas, electrical heating and cooling equipment, wire and cable, alternative energy and lightning protection. UL developed the Application Guides to assist code and inspection authorities, electric utilities, contractors, installers, users, system designers, and other interested parties in understanding the basic components of alternative energy systems and lightning protection systems and the applicable codes and standards in order to facilitate a reasonably safe and code-compliant installation. See Appendix A.

The White Book does not contain the names of companies authorized to use the UL Mark, nor does it contain specific identification of products authorized to bear the UL Mark. Such information appears in the Online Certifications directory.

Only those products bearing the appropriate UL Mark and the company’s name, trade name, trademark or other authorized identification should be considered as being covered by UL’s Certification, Listing, Classification and Follow-Up Service. The UL Mark provides evidence of listing or labeling, which may be required by installation codes or standards.

Many of the products bearing the UL Mark incorporate components that bear the UL Recognized Component Mark. The Recognized Component Mark is applicable to components that are incomplete in construction features or limited in performance capabilities. The Recognized Component Mark does not provide evidence of listing or labeling, which may be required by installation codes or standards.

The White Book contains General Guide Information in effect as of April 27th, 2015. Information on new or revised product categories established after the effective date will be found in UL’s Online Certifications Directory at www.ul.com/database and will appear in the next annual White Book.

Look for the UL Mark

Identification of UL Listed and Classified Products

The symbol and the name “Underwriters Laboratories Inc.” in various forms and abbreviations are registered with the U.S. Patent and Trademark Office, and in numerous other countries. Subject to the terms of UL’s Follow-Up Service Agreement, companies are permitted to use the symbol or other specified forms of UL’s name as part of the UL Mark on products that are Certified, Listed or Classified and that comply with UL’s requirements.

The product name as indicated in the General Guide Information for each product category is generally included as part of the UL Mark, but may be omitted when, in UL’s opinion, the use of the name is unnecessary and the UL Mark is directly and permanently applied to the product by stamping, molding, ink-stamping, silk screening or similar processes.

A separable UL Mark (not part of a nameplate and in the form of decals, stickers or labels) will always include the following four elements: UL’s symbol, the word “LISTED” or “CLASSIFIED,” the product or category name, and a control number assigned by UL.

The complete UL Mark will appear on the product unless otherwise indicated in the General Guide Information for a specific product category.
When a UL Certified or Listed product is of such a size, shape, material or surface texture that, in UL’s opinion, it is impossible to apply legibly the complete marking to the product, the complete UL Listing Mark will appear on the smallest unit container in which the product is packaged. In these cases UL may authorize the use of the UL symbol ® on the product in addition to the complete UL Mark on the package.

When a UL Certified or Classified product is of such a size, shape, material or surface texture that, in UL’s opinion, it is impossible to apply legibly the complete marking to the product, the complete UL Classification Mark will appear on the smallest unit container in which the product is packaged. In these cases there shall be no reference to UL on the product.

Refer to the General Guide Information for each product category for additional information on the specific UL Mark for the products in the category.

UL Certification Services and Marks

UL Certification Mark

Launched in mid-2013, the enhanced UL Certification Mark can be used on both UL Listed and Classified products and is intended to make it easier and simpler for stakeholders to understand the scope of UL’s certifications of a specific product. The enhanced UL Certification Mark makes it possible to bundle multiple UL certifications for multiple geographies into a single Mark design. Today, this mark is used for products certified to U.S., Canadian, European and Japanese requirements. This Mark utilizes a unique identifier to enable stakeholders to search UL’s Online Certifications Directory at [www.ul.com/database](http://www.ul.com/database) to quickly review detailed certification information.

All currently existing versions of UL’s Listing and Classification Marks remain valid and should continue to be accepted as an indication of certification.

UL expects the transition to the enhanced Mark to happen over time, so you may not see it in the immediate future. For more information on this important development, please go to [www.ul.com/markshub > Resources](http://www.ul.com/markshub > Resources). Access to the Marks Hub is free and open to all regulators, but registration to use it is required.

![Enhanced UL Certified Mark](image1)

![Enhanced UL Certified Mark](image2)

Listing Service

UL’s Listing Service is the most familiar form of UL’s product safety certification programs. The UL Listing Mark on a product means that the manufacturer has demonstrated the ability to produce a product that complies with appropriate requirements regarding reasonably foreseeable risks associated with the product. The UL Listing Mark for Canada is applied to products for use in Canada that have been investigated to Canadian safety requirements. The UL Listing Mark for Canada and the U.S. is applied to products for use in the U.S. and Canada that have been investigated to the requirements of both countries. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL’s requirements.

![UL Listed Mark](image3)

![UL Listed Mark for Canada and the United States](image4)

![UL Listed Mark for Canada](image5)
Classification Service

With UL’s Classification Service, UL determines that a manufacturer has demonstrated the ability to produce a product that complies with its requirements for the purpose of classification or evaluation regarding one or more of the following: (1) specific risks only, such as casualty, fire or shock; (2) performance under specified conditions; (3) regulatory codes; (4) other standards, including international or regional standards; or (5) other conditions UL may consider desirable. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL’s requirements.

UL’s Classification Mark includes a qualifying statement designated by UL. A UL Classification Mark for Canada is used for products intended for the Canadian marketplace. It indicates that UL has used Canadian standards to investigate the product for specific hazards or properties. A UL Classification Mark for Canada and the U.S. is used for products intended for the Canadian and U.S. marketplaces. This Mark indicates that UL has used the requirements of both countries to investigate the product for specific hazards or properties.

Component Recognition Service

Many UL investigations of equipment involve an evaluation of the suitability of components such as relays, thermostats, switches, etc. for specific applications. Where such components are designed to comply with all the construction and performance requirements of the category, they are eligible for UL Listing and suitable for either field or factory installation.

In some situations, components of special design may be incomplete in construction or restricted in performance capabilities and not Recognized for use as field-installed components. These components may be entirely suitable for factory installation on other equipment where the limitations of use are known to the manufacturer and where their use within such limitations may be investigated by UL.

With UL’s Component Recognition Service, UL determines that a manufacturer has demonstrated the ability to produce a component for use in an end product that complies with UL’s requirements. This type of investigation takes into account the performance and construction characteristics of the end product and how the component will be used in that product. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the component with UL’s requirements.

UL Recognized Components, or their packaging, are eligible to bear the UL Recognized Component Mark, the UL Recognized Component Mark for Canada, or the UL Recognized Component Mark for Canada and the U.S. The Recognized Component Mark does not provide evidence of listing or labeling, which may be required by installation codes or standards.
Field Evaluation Service

This service covers on-site safety evaluations of installed products or systems, conducted by UL technical staff. UL’s Field Evaluated Product Mark (below) can be applied to the product in the field if the product complies with UL’s safety requirements.

![UL Field Evaluated Product Mark](image)

Field Inspection Service

This service covers on-site safety inspections of products that were eligible to bear a UL Mark at the time of manufacture, but the UL Mark is not present on the product. A UL representative can perform an inspection and, if the product is determined to meet UL requirements, a UL Mark will be applied to the product.
The White Book includes the following:

- A compilation of all product categories applicable to an electrical inspector arranged alphabetically by category code
- General Guide Information for each product category that includes references to the requirements used for the investigation of the products and the UL Mark to be used on the product
- Information relating to limitations or special conditions applying to the product
- The titles and designations of standards or requirements that have been used for the investigation of products in a specific product category
- Index of UL Product Categories and Industry Terms
- Index of UL Product Categories Correlated to the 2014 NEC®
- Index of UL Product Categories Correlated to the 2011 NEC®
- UL Marking and Application Guides
- UL’s Online Certifications Directory Quick Guide (to assist in finding General Guide Information and Listings online)

UL Certification, Listing and Classification information is arranged alphabetically in the White Book by product category code.

The four-letter code (shown in parentheses) following each category title is the product category code designation.

This information may include the identification of published standards that have been used to investigate products in that category. There may not be a published standard against which a product can be tested and evaluated to determine its acceptability for the UL Mark. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from standards and other sources and will develop requirements to cover uses and conditions for which specific requirements did not previously exist.

UL permits the reproduction of the material contained in the White Book subject to the following conditions: 1. The Guide Information must be presented in its entirety and in a non-misleading manner, without any manipulation of the data. 2. The statement “Reprinted from the White Book with permission from UL LLC.” must appear adjacent to the extracted material. In addition, the reprinted material must include a copyright notice in the following format: “© 2015 UL LLC.”
Practical Application of the White Book in the Field

Using the White Book in the field to help identify the intended use of a Listed product to assist in determining compliance with Section 110.3(B) of ANSI/NFPA 70, “National Electrical Code” (NEC®), can be accomplished by at least two methods.

Method 1 —

If you know the Section in the 2014 or 2011 NEC® for which you are seeking to determine compliance, locate the Index of UL Product Categories Correlated to the 2014 or 2011 NEC® in the back of the White Book on page 627 for the 2014 or page 676 for the 2011 and search for the Code Section in question. The index may identify product categories applicable to the NEC® Section referenced if specific product categories exist for that Code Section. This index is a guide only and there may be other product categories for which Listed products are covered that may be applicable to the Code Section.

Method 2 —

This is a three-step process detailed below:

Step 1 - Determine the Product Identity from the UL Listing Mark. For the Enhanced UL Certification Mark, see Anatomy of the Enhanced Certification mark on page 44.

A UL Listing Mark is composed of four elements:
1. UL in a circle
2. The word “LISTED”
3. The Product Identity
4. An Issue Number or Control Number (a control number is a four-digit alphanumeric code)

Step 2 - Locate the Product Identity in the Index of UL Product Categories and Industry Terms located in the back of the White Book in Appendix C.

Once you have located the product identity, use the Index of UL Product Categories and Industry Terms in the back of the White Book in Appendix C to find the product category. The index will identify the product category and the page number for the product category Guide Information.
Step 3 - Access the product category Guide Information page identified in the Index of UL Product Categories and Industry Terms.

Once you locate the page, you will be able to find the Guide Information for the product category, in this case Signs (UXYT). See the Guide Information for Signs (UXYT) below:

<table>
<thead>
<tr>
<th>Guide Information for Signs (UXYT)</th>
</tr>
</thead>
</table>

Anatomy of UL Guide Information

- **Product Category Title**

- **Product Category Code**

  (This four-letter alpha code that appears in parentheses is assigned to each specific product category for cataloging in UL's directories. The product categories in the White Book as well as all UL directories are organized alphabetically by this code. Category Codes are not acronyms; they are created and assigned by mathematic process.)

- **General Information**

  relating to intended use and installation, scope of certification, product markings and requirements used for investigating the product.

- **UL Mark**

  The last paragraph of all Guide Information explains how to identify products covered under the product category. The UL Mark on the product is the only way to identify a Listed product. Always consult this section of the Guide Information to identify the UL Mark requirements for the product.
Anatomy of the Enhanced UL Certification Mark

1. BASIC UL CERTIFICATION MARK

The basic UL Certification Mark consists of the UL Enterprise logo; the word “Certified” that describes the service UL delivered; and the registered trademark symbol.

2. ATTRIBUTES

To describe a product’s UL Certification, the following attributes may now appear in the enhanced Mark. These designations detail the type of requirements for which the product has been certified. Depending on the product and its Certifications, one or more of these attributes may appear in the module of the Mark. In addition, some attributes are used in conjunction with the Safety attribute within the module.

SAFETY
FUNCTIONAL SAFETY
MARINE
NIERS
ENERGY
HEALTH EFFECTS
PERFORMANCE
SANITATION
SECURITY
SIGNALING

3. SERVICE DESCRIPTION

This is the service that UL provided in order to receive the UL Certification Mark.

4. MODULE

A module is added to the Basic UL Certification Mark to house attributes, country codes and unique identifiers.
5. COUNTRY CODES

The UL Certification Mark design uses a two-digit ISO country code to indicate the geography whose standards are used for Certification. In some cases such as certification to ISO or IEC standards, a country code will not appear in the Enhanced Mark module. Please refer to the appropriate category for more information.

US = United States  CA = Canada  EU = Europe  JP = Japan

6. UNIQUE ID

UL Certification Marks may have a unique identifier or a file number located in a module, others will have the product identity adjacent to the Certification Mark. This aids with traceability and provides more information about a product’s Certification. This information can be verified on UL’s Online Certifications Database at www.ul.com/database by entering the identifier in the File Number or Keyword Field. This will link you to the Certification information including the Product Category Guide Information and Certification record. See note 7 for more information on the product identity.

7. PRODUCT IDENTITY

Adjacent to the UL Certification Mark may be a marking that indicates the Product Identity. The product identity may be either on the same label or adjacent to it. To verify the product category in the UL White Book, locate the product identity then use the Index of Product Categories and Industry terms in the back of the White Book in Appendix C to find the product category. This index will identify the product category and the page number for the product category Guide Information. See the Practical Application of the White Book in the Field, Method 2 on page 727 for more information on using the Index of UL Product Categories and Industry Terms in Appendix C.
Field Modifications

What happens to the Listing if a UL-Listed product is modified in the field?
An authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements when it was shipped from the factory. When a UL-Listed product is modified after it leaves the factory, UL has no way to determine if the product continues to comply with the safety requirements used to certify the product without investigating the modified product. UL can neither indicate that such modifications “void” the UL Mark, nor that the product continues to meet UL’s safety requirements, unless the field modifications have been specifically investigated by UL. It is the responsibility of the Authority Having Jurisdiction (AHJ) to determine the acceptability of the modification or if the modifications are significant enough to require one of UL’s Field Engineering Services staff members to evaluate the modified product. UL can assist the AHJ in making this determination.

An exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the marking on the product have been investigated for use in that product.

If a party wishes UL to determine if the modifications made to a UL Listed product comply with UL requirements, the appropriate Field Engineering Service can be initiated to investigate the modifications. This investigation will only be conducted after UL consults with the AHJ to ensure that UL’s investigation addresses all areas of concern and meets all of the AHJ’s needs.

If you have any questions or would like to inquire about a Field Evaluation, contact Field Services at +1-877-UL-HELPS, prompt #2 (+1-877-854-3577) or visit http://www.ul.com/field/.

Field Labeling

Is it permissible to apply a UL Mark in the field?
The application of a UL Mark in the field is only permitted when an inspection is conducted under one of UL’s Field Engineering Services in the presence of a UL representative.

CE Marking Information

A CE Marking is a European marking of conformity that indicates that a product complies with the essential requirements of the applicable European laws or Directives with respect to safety, health, environment and consumer protection. Generally, this conformity to the applicable directives is done through self-declaration. The CE Marking is required on products in the countries of the European Economic Area (EEA) to facilitate trade between the member countries. The manufacturer or his authorized representative established in the EEA is responsible for affixing the CE Marking to his product. The CE Marking provides a means for a manufacturer to demonstrate that his product complies with a common set of laws required by all of the countries in the EEA to allow free movement of trade within the EEA countries.

Unlike the UL Mark, the CE Marking:
- Is not a safety certification mark,
- Is generally based on self-declaration rather than third-party certification, and
- Does not demonstrate compliance to North American safety standards or installation codes.

A product that bears a CE Marking may also bear a certification mark, such as UL’s Listing Mark; however, the CE Marking and the UL Mark have no association. The UL Mark indicates compliance with the applicable safety requirements in effect in North America and is evidence of UL certification, which is accepted by model North American installation codes, such as the National Electrical Code® and the Canadian Electrical Code®.

The CE Marking on products is not a certification mark. AHJs should continue to look for the UL Mark on products in order to determine if a product complies with applicable safety requirements for North America.
BUILDING MATERIALS (AABM)

GENERAL

Building materials include adhesives, coatings, acoustical materials and the like, investigated for surface burning characteristics, such as flame spread and smoke developed during fire exposure. Other building materials include prefabricated buildings, structural building products, gypsum board, fireplaces and chimneys, elevator equipment, and exiting equipment, such as exit signs, exit appliances, and emergency lighting and power equipment.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or ISO standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE PROTECTION EQUIPMENT (AAEP)

GENERAL

Fire protection equipment includes fire suppression equipment and systems, fire alarm equipment and fire fighting equipment, such as fire hoses, fire and emergency services protective clothing, and automotive fire apparatus. This equipment is intended to be used in buildings, structures, buildings, furnishings, for combustibility, such as upholstered furniture, mattresses, and warehouse pallets.

The equipment is intended for use only as described in the general Guide Information for each product category and individual certifications. This equipment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than those described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

CERTIFICATE SERVICE

Fire alarm systems require extensive installation work and maintenance by the certified installing company, UL’s Standards for these systems cover installation methods, extent of protection, and maintenance service, which are supervised under UL’s Certificate Service.

Under Certificate Service, UL authorizes the issuance of UL’s certificates to installations which the certified installing company represents to be in compliance with requirements established for the product category. The certificate indicates the classification, extent, location of equipment, period covered by the certificate, and name of the installing company.

UL conducts countercheck field examinations of representative installations of the certified installing company; UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification or non-conformity with requirements. If installations not in compliance with UL’s requirements are found as a result of field examinations, they are subject to correction by the certified installing company or cancellation of the certificate.

All of a company’s alarm system installations may not be covered under UL’s Certificate Service. Only those installations for which a certificate has been properly issued are covered under UL’s Certificate Service.

UL maintains a Certificate Verification Service (ULCVS) that allows Authorities Having Jurisdiction (AHJs) to verify up-to-date Certificate information and identify companies eligible to issue Certificates as of the date of the inquiry. Only those alarm or signal system installations for which a Certificate has been issued are covered under UL’s Certificate Service. The verification of a Certificate on ULCVS is the only method UL provides to identify the Certificated alarm systems actively covered under UL’s Certification and Follow-Up Service.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products. However, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or ISO standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.
cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, some products may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual certifications of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless otherwise specified. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as “AL-CU.”

Example: Except as noted below or in the general Guide Information for certain product categories, the following terminal provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.15(B)(16) of ANSI/NFPA 70, “National Electrical Code” (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C (circuit rated 100 A or less) or 75°C (circuit rated over 100 A). Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are certified for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals 15 A and 20 A switches and receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL/CU” are for use only with copper conductors. Terminals of switches rated 30 A and above marked “AL/CU” are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING, COOLING, VENTILATING AND COOKING EQUIPMENT (AAHC)

GENERAL

The equipment is intended for heating, cooling, refrigerating, ventilating and cooking, and uses energy sources including electricity, gas, petroleum-base liquid, solid fuel or solar energy.

Fuel-fired equipment is intended for use only with the fuels described in the general Guide Information for each product category and individual certifications. This equipment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other fuels, and in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or ISO standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of its UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual certifications of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.
the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

**ELECTRICAL INSTALLATIONS**

**General** — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant power will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

**Supply Conductors** — Except as noted in the general Guide Information for some product categories, most terminations are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other illustrated product information. The marking may be in an abbreviated form, such as “AL-CU.”

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C amperages (for circuits rated 100 A or less) and 75°C amperages (for circuits rated over 100 A) should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

**Terminations** — Copper pigtail leads may be used with an aluminum or copper-clad aluminum supply wires in hazardous (classified) locations (see 1) the splicing devices are certified for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switch and receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper, and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL-CU” are for use with copper conductors only. Terminals of switches rated 30 A and above marked “AL/AL’” are for use with aluminum, copper, and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such mixing.

**Hazardous Locations** — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations. 

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)**

**GENERAL**

Electrical equipment for use in and relating to Class I, II and III, Division 1 and 2 hazardous (classified) locations has been investigated with reference to risk to life and property and for potential conformity to the installation and use provisions of ANSI/NFPA 70, “National Electrical Code” (NEC), or United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, “General Provisions,” 46CFR111, “Electric Systems — General Requirements,” 46CFR112, “Emergency Lighting and Power Systems,” and 46CFR113, “Communication and Alarm Systems and Equipment.” Those products investigated for conformity to the installation and use provisions of the USCG Regulations are identified in the general Guide Information for each product category or the individual certifications for the product. Attention is called to the limitations of the individual certifications specified in the Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to hazardous (classified) locations or 2) the individual certifications as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, II and III hazardous (classified) locations.

Regarding electrical equipment for use in and relating to Zone classified locations, some general technical information is provided together with the specific technical information provided regarding Division classified locations. For additional specific technical information regarding Zone classified locations, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

Electrical equipment for use in and relating to hazardous (classified) locations must also comply with the applicable requirements for the same type of equipment for use in unclassified locations. For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).  

**HAZARDOUS (CLASSIFIED) LOCATIONS — GENERAL INFORMATION**

Hazardous (classified) locations, as defined in the NEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids, combustible dusts, or ignitable fibers or flyings. There are two independent classification systems. One system, found in Article 500 of the NEC, divides all hazardous (classified) locations into Classes, Divisions and Groups. A Division 1 location is a location where an ignitable concentration of a flammable or combustible material is present only under abnormal operating conditions. A Division 2 location is a location where an ignitable concentration of a flammable or combustible material is present only under abnormal operating conditions.

The other classification system is found in Articles 505 and 506 of the NEC:

Article 505 divides locations having gases and vapors into Class I, Zones and Gas Groups. A Zone 0 location is a location where ignitable concentrations in gases and vapors are likely to exist continuously or frequently for an extended period of time. A Zone 1 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 2 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period. Article 506 divides locations having dusts, fibers or flyings into Zones. A Zone 20 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 21 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 22 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period.

Equipment against explosion in Class I, Division 1 hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Classes and Groups for which equipment has been certified are shown in the individual certifications for each product category and are marked on the equipment itself. In addition, intrinsically safe circuit-wiring terminals and intrinsically safe equipment is marked “Intrinsically Safe.”

**Gas, Vapor and Dust Groups**

The following paragraphs group flammable and explosive mixtures of specific gases, vapors and dusts in accordance with the NEC classifications noted in Article 500. For a complete list of group classifications for Class I and II materials where used within Divisions 1 or 2, see ANSI/NFPA 497, “Recommended Practice for the Classification of Flammable Liquids, Gases, or Vapors and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas,” and ANSI/NFPA 499, “Recommended Practice for the Classification of Combustible Dusts and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas.”

**Class I Equipment**

Equipment for use in Class I hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification for Divisions 1 and 2, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group A — Atmospheres containing acetylene

Class I, Group B — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) less than or equal to...
0.45 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.45. Examples of Group B materials are acrolein, butadiene, ethylene oxide, propylene oxide, hydrogen, and fuel and combustible process gases containing more than 30% hydrogen by volume.

Class I, Group C — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.75 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80. Examples of Group C materials are ethylene and ethanol.

Class I, Group D — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.75 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.45. Examples of Group D materials are acetone, ammonia, benzene, butane, cyclopropane, ethane, gasoline, hexane, methane, methanol, naphtha and propane.

Equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations, as defined in Article 505 of the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group IIIC — Atmospheres containing hydrogen, acetylene, or gases or vapors having either a maximum experimental safe gap (MESG) greater than or equal to 0.50 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.45.

Class I, Group IIIB — Atmospheres containing acetylene, ethylene, or gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.50 mm and less than or equal to 0.90 mm, or a minimum igniting current ratio (MIC ratio) greater than 0.45 and less than or equal to 0.80.

Class I, Group IIA — Atmospheres containing acetylene, ammonia, ethyl alcohol, gasoline, methane, propane, or gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.90 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80.

The following table compares Class I, Division 1 and 2 Gas Groups with Class I, Zone 0, 1 and 2 Gas Groups. The gases shown are representative of others in the Group. Division 1 and 2 Zone 0, 1 and 2
A (acetylene) IIC (acetylene and hydrogen)
B (hydrogen) IIIC (hydrogen and hydrogen)
C (ethylene) IIA (ethylene)
D (propane) IIA (propane)

Class I Equipment in Class II and III Locations Equipment certified for use in Class I locations is not necessarily acceptable for Class II or III locations as it may not be dust-tight or operate at a safe temperature when blanketed with dust, fibers or flyings.

Class II Equipment Equipment for use in Class II hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of combustible dusts in air. For purposes of location classification, the NEC groups combustible dust-air mixtures as follows:

Class II, Group E — Atmospheres containing combustible metal dusts, including aluminum, magnesium, and their commercial alloys, or other combustible dusts whose particle size, abrasiveness, and conductivity present an equivalent hazard.

Class II, Group F — Atmospheres containing carbon black, charcoal, coal or coke dusts which have more than 8% total volatile material, or atmospheres containing these dusts sensitized by other materials so that they present an explosion hazard.

Class II, Group G — Atmospheres containing combustible dusts not included in Group E or F, including flour, grain, wood, plastic and chemicals.

There are no dust groups for Zone 20, 21 or 22. In addition, Article 506 of the NEC does not cover locations where metal dusts are present.

Class II Equipment in Class III Locations Equipment certified for Class II, Group G hazardous (classified) locations is also suitable for use in Class III locations, except for 1) those products marked for Division 2 only, and 2) fan-cooled-type motors where there is a very large amount of lint or combustible flyings that are likely to choke or clog the air passages of the motor.

Class III Equipment Equipment for use in Class III hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of easily ignitable fibers or flyings. These fibers or flyings are not likely to be in suspension in the air in quantities sufficient to produce ignitable mixtures.

There are no groups for fibers and flyings for Class III or for Zone 20, 21 or 22.

Intrinsically Safe Circuits and Apparatus, and Associated Apparatus Intrinsically safe circuits and apparatus may be investigated for any or all of the Classes and Groups as defined in the NEC. In an intrinsically safe circuit, the energy level available in the hazardous (classified) location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. It is important that intrinsically safe apparatus for locations containing metal dusts be constructed to exclude dust in order maintain the energy limitations by minimizing the possibility of circuit faults. To maintain the low energy levels, it is necessary that the intrinsically safe and associated apparatus be installed and interconnected in accordance with Article 504 of the NEC and the instructions provided.

Associated apparatus is apparatus in which the circuits are not necessarily intrinsically safe, but which affect the energy in the intrinsically safe circuits and are relied upon to maintain intrinsically safety. Associated apparatus is not intended for use in hazardous (classified) locations unless use in hazardous (classified) locations is specifically indicated.

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.
Nonincendive component — A component having contacts for making or breaking an incendiary circuit and the contacting mechanism is constructed so that the component is incapable of igniting the specified flammable gas-air or vapor-air mixture. The housing of a nonincendive component is not intended to exclude the flammable atmosphere or contain an explosion.

Nonincendive equipment — Equipment having electrical/electronic circuitry that is incapable, under normal operating conditions, of causing ignition of a specified flammable gas-air, vapor-air, or dust-air mixture due to arcing or thermal means.

Nonincendive field wiring — Wiring that enters or leaves an equipment enclosure and, under normal operating conditions of the equipment, is not capable, due to arcing or thermal effects, of igniting the flammable gas-air, vapor-air, or dust-air mixture. Normal operation includes opening, shorting, or grounding the field wiring.

Nonincendive field wiring apparatus — Apparatus intended to be connected to nonincendive field wiring.

Nonsparking — Equipment or component constructed to minimize the risk of occurrence of arcs or sparks capable of creating an ignition hazard during conditions of normal operation.

Sealed device — A device so constructed that it cannot be opened during normal operational conditions or operational maintenance; it is sealed to restrict entry of an external atmosphere.

Dust-ignition-proof equipment — Equipment enclosed in a manner that excludes dusts and does not permit arcs, sparks, or heat otherwise generated or liberated inside of the enclosure to cause ignition of exterior accumulations or atmospheric suspensions of a specified dust on or in the vicinity of the enclosure.

Pressurized — The process of pressurization, supplying an enclosure with a protective gas with or without continuous flow at sufficient pressure to prevent the entrance of a flammable gas or vapor, a combustible dust, or an ignitable fiber.

Suitability of Certified Equipment
Equipment intended for use in a hazardous (classified) location Class and Group and marked “Division 1” or “Div. 1” or without any Division indication is suitable for use in both Division 1 and 2 locations as defined in the NEC, and in unclassified locations. Equipment marked “Division 2” or “Div. 2)” is suitable only for Division 2 and unclassified locations.

The NEC also permits the following:
- Intrinsically safe equipment for Class I, Division 1 locations to be used in a Class I, Zone 0, 1 or 2 location of the same gas and with a suitable temperature class.
- Equipment (other than intrinsically safe equipment) for Class I, Division 1 locations to be used in a Class I, Zone 0 or 2 location of the same gas and with a suitable temperature class.
- Equipment for Class I, Division 2 locations to be used in a Class I, Zone 0 location of the same gas and with a suitable temperature class.
- Equipment for Class I, Division 0 locations to be used in a Class I, Division 1 or 2 location of the same gas and with a suitable temperature class.
- Equipment for Class I, Zone 0, 1 or 2 locations to be used in a Class I, Division 2 location of the same gas and with a suitable temperature class.
- Equipment for Class II, Division 1 locations to be used in a Zone 20, 21 or 22 location with a suitable temperature class.
- Equipment for Class II, Division 2 locations to be used in a Zone 22 location with a suitable temperature class.
- Equipment for Zone 20 locations to be used in a Class I, Division 1 location of the same dust and with a suitable temperature class.
- Equipment for Zone 20, 21 or 22 locations to be used in a Class II, Division 2 location of the same dust and with a suitable temperature class.
- Equipment for Zone 20 locations with a temperature class of not greater than T120°C for equipment subject to overloading or not greater than T165°C for equipment not subject to overloading to be used in a Class III, Division 1 location.
- Equipment for Zone 20, 21 or 22 locations with a temperature class of not greater than T120°C for equipment subject to overloading or not greater than T165°C for equipment not subject to overloading to be used in a Class III, Division 2 location.

In addition, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

RELATED EQUIPMENT
For additional information on electrical equipment for use in and relating to Zone classified locations, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAI).

For additional information on electrical equipment for use in unclassified locations, see Electrical Equipment for Use in Ordinary Locations (AAI).

TEMPERATURE CONSIDERATIONS
The marked temperature class (T-code) of the equipment is based on either the maximum external temperature or internal temperature of the equipment, depending on the protection technique used.

Equipment is required to be marked with the operating temperature or temperature class (T-code) if the maximum operating temperature is more than 100°C (212°F). The marking specifies the temperature class or operating temperature based on a +40°C (+104°F) ambient temperature, or based on an ambient temperature for the equipment is rated and marked for an ambient temperature of greater than +40°C (+104°F). For equipment rated and marked for an upper ambient temperature of less than +40°C (+104°F), the operating temperature or temperature class is still based on +40°C (+104°F).

For Class I and II locations, this temperature marking should not exceed the ignition temperature of the specific combustible material to be encountered. For organic dusts that may dehydrate or carbonize, the temperature marking should not exceed the lower of either the ignition temperature or 165°C.

For Class III locations, the maximum permitted temperature is 120°C for equipment that is subject to overloading (such as motors) and 165°C for equipment that is not subject to overloading.

AMBIENT TEMPERATURES
Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F). Equipment may be investigated and marked for a lower ambient temperature that is greater than -25°C (-13°F). While equipment may be marked for an upper ambient temperature that is less +40°C (+104°F), equipment is always investigated for an upper ambient temperature of at least +40°C (+104°F).

Use of equipment under conditions of higher than normal atmospheric pressure, oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within explosion-proof equipment.

ENCLOSURE MODIFICATION AND MAINTENANCE
The integrity of an enclosure for explosion-proof or dust-ignition-proof equipment must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of the enclosure to contain the explosion or to exclude dust. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS
Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present. Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT below for more information.

ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT
110.11 of the NEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. 300.6 of the NEC provides guidance regarding protection against corrosion. To assist Authorities Having Jurisdiction, electrical equipment certified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with an enclosure type number or numbers. The following table summarizes the intended uses of the various enclosure types.

### Access to Hazardous Environment

- **Nonprotected**: No access to hazardous environment.
- **Finger**: Access with finger tips.
- **Tool**: Access with tools.
- **their equipment as follows:**
- **Dripping**: 12.5 mm diameter and greater
- **Jetting**: 1 mm diameter and greater
- **Powerful Jetting**: 1 mm diameter and greater
- **Continuous**: 1 mm diameter and greater
- **Temporary Immersion**: 1 mm diameter and greater
- **Continuous**: 1 mm diameter and greater
- **Water Harmful Effects**: 1 mm diameter and greater
- **Dripping (15 degrees tilted)**: 1 mm diameter and greater
- **Spraying**: 1 mm diameter and greater
- **Jetting**: 1 mm diameter and greater
- **Powerful Jetting**: 1 mm diameter and greater
- **Temporary Immersion**: 1 mm diameter and greater
- **Continuous**: 1 mm diameter and greater

### Fittings at Supply Entries

- Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, the enclosure must be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

### Cable and Conduit Seals

Equipment with a factory-installed conduit seal is marked “Leads factory sealed,” or equivalent wording. The absence of this marking indicates that the need for a field-installed seal in accordance with 501.15 or 502.15 of the NEC should be determined.

### Process Seals

Process-connected electrical equipment provided with seals to prevent the migration of process fluids into the electrical system are either the single-seal or dual-seal types. The construction, testing and marking requirements for process seals are found in ANSI/ISA-12.27.01. “Requirements for Process Sealing Between Electrical Systems and Flammable or Combustible Process Fluids.”

### Wiring Methods

Wiring methods permitted by the NEC for hazardous (classified) locations are, in general, more restrictive than those permitted for unclassified locations. Extra-hard-use flexible cord is only permitted for connection of portable luminaires and other types of portable utilization equipment and the fixed portion of their supply circuit, or in other situations where flexibility is necessary for the installation as determined by the Authority Having Jurisdiction.

### Requirements

The standards used to investigate these products address the risk of explosion associated with installation in a hazardous (classified) location, as well as the risk of fire and electric shock associated with any electrical equipment. Unless indicated otherwise in the Guide Information for the product category, the basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion are referenced below for the protection techniques shown.

---

In addition to the above enclosure types that provide a degree of protection against environmental conditions other than explosive atmospheres, there are two additional enclosure-type numbers: 7 (Class I, Division 1, Groups A, B, C and D involving air-break equipment) and 9 (Class II, Division 1, Groups E, F and G involving air-break equipment). These two additional enclosure types provide a degree of protection against explosive atmospheres. The marking of enclosure-type numbers 7 and 9 is optional, as the marking of Class and Group is required. The marking of Division 1 is optional for equipment suitable for Divisions 1 and 2.

Enclosures for indoor locations include Types 1, 2, 5, 7, 9, 12, 12K and 13; enclosures for indoor or outdoor locations include Types 3, 3R, 3S, 4, 4X, 6 and 6P.

In some cases, individual appliances and equipment may be marked “Raintight” or “Rainproof” indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as “Rainproof” such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.
### EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)

### EQUIPMENT FOR USE IN THE WHITE BOOK

- ANSI/UL 347, “Medium-Voltage AC Contactors, Controllers, and Control Centers” for medium-voltage applications, unless otherwise specified in the general Guide Information for each product category.

#### INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

#### GLOBAL POSITIONING SYSTEMS

If provided as part of the equipment, global positioning system (GPS) and/or enhanced 911 (E911) hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of equipment have not been investigated for performance or reliability. The equipment has only been investigated for the explosion, fire, shock and casualty hazards required by the applicable hazardous (classified) locations standards. Certification of the equipment does not cover the performance or reliability of any GPS and/or E911 hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of the equipment. Ul makes no representations, warranties or assurances whatsoever regarding the performance or reliability of any GPS-related and/or E911-related functions of the equipment.

#### FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

#### OPEN-TYPE EQUIPMENT

Unless indicated otherwise in the Guide Information for the applicable hazardous (classified) locations product category, and where permitted for comparable unclassified locations products, open-type hazardous (classified) locations equipment is permitted when it is intended for installation within a suitable enclosure. Examples of installation issues to consider when determining the suitability of the equipment enclosure include, but are not limited to, the following as applicable: 1) the involved area classification, 2) protection against any specific environmental conditions, 3) thread engagement, and 4) whether a tool is required for opening of the enclosure. Installation requirements relating to the suitability of the enclosure are specified in the instructions or markings for the open-type equipment.

#### MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL, the United States Coast Guard, the American Boat and Yacht Council, Inc., and the National Fire Protection Association. For additional information, see the general Guide Information for the specific product category. Equipment bearing UL’s Marine Mark is suitable for use only with stranded copper wire.

***************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

#### GENERAL

Electrical equipment for use in unclassified (ordinary) locations is intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). Electrical equipment for use in hazardous (classified) locations, as defined by the NEC, may also be used in ordinary locations.

#### INVESTIGATION REQUIREMENTS AND STANDARDS

Electrical equipment for use in ordinary locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the NEC. Some products are certified for use within the scope of the NEC. Such products are investigated for the specifications or the use conditions indicated in the general Guide Information for each product category.

LOOK FOR THE UL MARK ON PRODUCT
ENCLOSURES MARKED WITH A TYPE MAY ALSO BE MARKED AS:

- A Type 1 enclosure may be marked “Indoor Use Only”
- A Type 3, 3X, 3S, 3SX, 4, 4X, 6 or 6P enclosure may be marked “Raintight”
- A Type 3R or 3RX enclosure may be marked “Rainproof”
- A Type 4, 4X, 6 or 6P enclosure may be marked “Watertight”
- A Type 3X, 3RX, 3SX, 4X or 6P enclosure may be marked “Corrosion Resistant”
- A Type 2, 5, 12, 12K or 13 enclosure may be marked “Dripproof”
- A Type 3, 3X, 3S, 3SX, 5, 12K or 13 enclosure may be marked “Dusttight”

For equipment designated “Raintight,” testing designed to simulate exposure to a beating rain will not result in entrance of water. For equipment designated “Rainproof,” testing designed to simulate exposure to a beating rain will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure. “Watertight” equipment is so constructed that water does not enter the enclosure when subjected to a stream of water. “Corrosion resistant” equipment is so constructed that it provides degree of protection against exposure to corrosive agents such as salt spray.

“Dripproof” equipment is so constructed that falling moisture or dirt does not enter the enclosure. “Dusttight” equipment is so constructed that circulating or airborne dust does not enter the enclosure.

SIZE RATING

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limits for those certified products.

Marked ratings of utilization equipment include amperage, wattage or volt-ampere ratings. Motor-operated utilization equipment may also be marked with a horsepower rating. The actual marked ratings (other than the horsepower included in the individual certification) can be used to select branch-circuit circuit-branch-circuit overcurrent protection, control devices and disconnecting means.

The ampere or wattage marking on power-consuming equipment is valid only above the equipment’s marked rating. In general, the current into heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

APPLIANCE AND UTILIZATION EQUIPMENT TERMINATIONS

Except as noted, in the general Guide Information for some product categories, most terminals, unless marked otherwise, are for use only with copper wire. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as “AL-CU.”

Except as noted in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits as specified in Table 310.15(B)(16) of the NEC. If the termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C amperages (for circuits rated 100 A or less) and 75°C amperages (for circuits rated over 100 A) shall be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limits for those certified products.

MARKET RATING

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limits for those certified products.
A 75°C conductor temperature marking on a terminal (e.g., AL7, AL7CU, AL2CU or AL9, CU9AL, AL9CU) does not in itself indicate that 75 or 90°C insulated wire can be used unless 1) the circuit breaker or switch is marked for 75 or 90°C, 2) the terminal is marked for use only with aluminum conductors, and 3) the wiring system is acceptable for the wire size used.

Terminals marked “CO/ALR” are for use with copper-clad aluminum conductors, both stranded and solid, unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL/CU” are for use with copper conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

Tightening Torque — Some equipment may be marked to show a tightening torque for wire connectors intended for use with field wiring.

Supply Cords — When flexible supply cords or cord sets are replaced, the conductor size should be of the same type, AWG size, voltage rating and temperature rating as originally used.

**INSTRUCTIONS AND PRODUCT MARKINGS**

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

**FIELD MODIFICATIONS**

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

**MARINE EQUIPMENT**

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements for UL, the United States Coast Guard (USCG), the American Boat and Yacht Council, Inc. (ABYC), and the National Fire Protection Association (NFPA). For additional information, see the general Guide Information for the specific product category. Equipment bearing UL’s Marine Mark is suitable for use only with stranded copper wire.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS (AAME)**

**GENERAL**

Mechanical equipment includes mechanically operated and gasoline-powered products, worker safety-related products, toys, and other products that have been investigated for mechanical strength and operation with regard to personal injury and for other specific hazards. This equipment is not intended for distribution, installation, and use in areas other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

**INVESTIGATION REQUIREMENTS AND STANDARDS**

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are acceptable for use only with copper and copper-clad aluminum conductors, both solid and stranded, unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL/CU” are for use with aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

**Wiring Devices** — Supply terminals of 15 A and 20 A switches and receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

**Supply Cords** — When flexible supply cords or cord sets are replaced, the conductor size should be of the same type, AWG size, voltage rating and temperature rating as originally used.

**INSTALLATION REQUIREMENTS**

The limitations for field modifications are intended for use in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

**SUPPLEMENTAL INFORMATION**

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

**MARINE EQUIPMENT**

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL, the United States Coast Guard (USCG), the American Boat and Yacht Council, Inc. (ABYC), and the National Fish Protection Association (NFPA). For additional information, see the general Guide Information for the specific product category. Equipment bearing UL’s Marine Mark is suitable for use only with stranded copper wire.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for
MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS (AAME)

Equipment for use in and relating to Zone classified hazardous locations (AANZ)

GENERAL

Electrical equipment intended for use in and relating to Class I, Zone 0, 1 and 2 Zone 20, 21 and 22 hazardous (classified) locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of Articles 505 and 506 of ANSI/NFPA 70, “National Electrical Code” (NEC), or United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, “General Provisions,” 46CFR111, “Electric Systems – General Requirements,” 46CFR112, “Emergency Lighting and Power Systems,” and 46CFR113, “Communication and Alarm Systems and Equipment.” Attention is called to the limitations of the individual certifications specified in the general Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to Zone classified hazardous locations or 2) the individual certifications as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, Zone 0, 1 and 2 and Zone 20, 21 and 22 hazardous (classified) locations.

Regarding electrical equipment for use in and relating to Division classified locations, some general technical information is provided together with the specific technical information provided regarding Zone classified locations. For additional specific technical information regarding Division classified locations, see Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AADD).

Electrical equipment for use in and relating to hazardous (classified) locations must also comply with the applicable requirements for the same type of equipment for use in unclassified locations. For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

HAZARDOUS (CLASSIFIED) LOCATIONS

GENERAL INFORMATION

Hazardous (classified) locations, as defined in the NEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids, combustible dusts, or ignitable fibers or flyings.

There are two independent classification systems. One system is found in Articles 505 and 506 of the NEC. Article 505 divides hazardous locations having gases and vapors into Class I, Zones and Gas Groups. A Zone 0 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 1 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 2 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period.

Article 506 divides locations having dusts, fibers or flyings into Zones. A Zone 20 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 21 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 21 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 22 location is a location where ignitable concentrations are present continuously or for long periods of time.

The other classification system, found in Article 500 of the NEC, divides all hazardous (classified) locations into Classes, Divisions, and Groups. A Division 1 location is a location where an ignitable concentration of a flammable or combustible material is present under normal operating conditions. A Division 2 location is a location where an ignitable concentration of a flammable or combustible material is present only under abnormal operating conditions.

Protection against explosion in hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Classes, Zones and Groups for which equipment has been certified is shown in the individual certifications under the respective categories and is marked on the equipment itself. In addition, intrinsically safe circuit-wiring terminals and intrinsically safe equipment is marked “Intrinsically Safe.”

Gas and Vapor Groups

The following paragraphs group flammable and explosive mixtures of specific gases and vapors in accordance with the NEC classifications. For a complete list of group classifications for Class I materials, see ANSI/NFPA 497, “Recommended Practice for the Classification of Flammable Liquids, Gases, or Vapors and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas,” or IEC 60079-12. “Classification of Mixtures of Gases or Vapors with Air According to their Maximum Experimental Safe Gaps and Minimum Igniting Currents.”

**EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)**

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.

### Equipment Relating to Hazardous (Classified) Locations

Equipment relating to hazardous (classified) locations includes electrical equipment not intended for installation in hazardous (classified) locations except for provision of certain intrinsically safe (low energy) circuit extensions as indicated in the individual certifications.

**Suitability of Certified Equipment**

Equipment marked for use in or relating to Class I, Zone 0 locations is also suitable for Zone 1 and 2 locations of the same gas group and with a suitable temperature class. Equipment marked for use in or relating to Class I, Zone 1 locations is also suitable for Zone 2 locations of the same gas group and with a suitable temperature class. Equipment marked for use in or relating to Class I, Zone 2 locations is suitable only for use in or relating to those locations classified as Class I, Zone 1 or Zone 2.

Equipment marked for use in or relating to Zone 20 locations is also suitable for Zone 21 and 22 locations with a suitable temperature class. Equipment marked for use in or relating to Zone 21 locations is also suitable for use in or relating to Zone 22 locations with a suitable temperature class. Equipment marked for use in or relating to Zone 22 locations is suitable only for use in or relating to those locations classified as Class II, Division 2 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class II, Division 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 0 locations to be used in a Class I, Division 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 0 locations to be used in a Class I, Division 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 1 locations to be used in a Class I, Zone 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 1 locations to be used in a Class I, Zone 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 2 locations to be used in a Class I, Zone 2 location of the same gas group and with a suitable temperature class.

Equipment for Class II, Division 1 locations to be used in a Class II, Division 1 location of the same gas group and with a suitable temperature class.

Equipment for Class II, Division 2 locations to be used in a Class II, Division 2 location of the same dust and with a suitable temperature class.

Equipment for Zone 20 locations to be used in a Class II, Division 1 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class II, Division 2 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class III, Division 1 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class III, Division 2 location of the same dust and with a suitable temperature class.

In addition, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

### RELATED EQUIPMENT

For additional information on electrical equipment for use in and relating to Division classified locations, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAI).

For additional information on electrical equipment for use in unclassified locations, see Electrical Equipment for Use in Ordinary Locations (AAL).

### CLASS I, ZONE 0, 1 AND 2 PROTECTION TECHNIQUES

Equipment for use in Class I, Zone 0, 1 or 2 locations may employ one or more of the following protection techniques:

<table>
<thead>
<tr>
<th>Location</th>
<th>Classification</th>
<th>Protection Technique</th>
<th>Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zone 0</td>
<td>Intrinsic safety (2 fault)</td>
<td>ia</td>
<td></td>
</tr>
<tr>
<td>Zone 1</td>
<td>Dust-ignition-protected enclosure</td>
<td>ib</td>
<td></td>
</tr>
</tbody>
</table>

Intrinsic Safety — Equipment in which any spark or thermal effect produced under normal or fault conditions is incapable of causing ignition of the atmosphere. See Intrinsically Safe Circuits and Apparatus, and Associated Apparatus above for more information.

Encapsulation — Parts capable of ignition are completely surrounded by an encapsulating material.

Pressurization — A protective gas is maintained inside the equipment enclosure at a pressure above that of the surrounding atmosphere, in order to prevent ingress of the explosive gas or vapor.

Oil Immersion — Parts capable of ignition are immersed in a protective oil.

Increased Safety — The equipment contains no normally arcing parts, and additional measures (such as larger spacings between wiring connections) are taken to prevent the possibility of high temperatures or sparks. A minimum IP rating of IP 54 is required.

Pressurization — Parts capable of ignition are completely surrounded by an encapsulating material.

When interconnecting associated apparatus with equipment for use in a Class III, Division 2 location of the same gas group and with a suitable temperature class.

Equipment for Zone 2 locations of the same gas group and with a suitable temperature class.

Equipment for use in or relating to Class I, Zone 0 locations to be used in a Class I, Zone 0 or 2 location of the same gas group and with a suitable temperature class.

Equipment for use in or relating to Class I, Zone 0 or 2 location of the same gas group and with a suitable temperature class.

Equipment for use in or relating to Class I, Zone 1 locations to be used in a Class I, Zone 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class I, Zone 0 locations to be used in a Class I, Division 1 or 2 location of the same gas group and with a suitable temperature class.

Equipment for Class II, Division 1 locations to be used in a Class II, Division 1 location of the same gas group and with a suitable temperature class.

Equipment for Class II, Division 2 locations to be used in a Class II, Division 2 location of the same dust and with a suitable temperature class.

Equipment for Zone 20 locations to be used in a Class II, Division 1 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class II, Division 2 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class III, Division 1 location of the same dust and with a suitable temperature class.

Equipment for Zone 20, 21 or 22 locations to be used in a Class III, Division 2 location of the same dust and with a suitable temperature class.

In additional, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

**ZONE 20, 21 AND 22 PROTECTION TECHNIQUES**

Equipment for use in Zone 20, 21 or 22 locations may employ one or more of the following protection techniques:

<table>
<thead>
<tr>
<th>Location</th>
<th>Classification</th>
<th>Protection Technique</th>
<th>Identification</th>
</tr>
</thead>

</tbody>
</table>

Intrinsic Safety — Equipment in which any spark or thermal effect produced under normal or fault conditions is incapable of causing ignition of the atmosphere. See Intrinsically Safe Circuits and Apparatus, and Associated Apparatus above for more information.

Encapsulation — Parts capable of ignition are completely surrounded by an encapsulating material.

Pressurization — A protective gas is maintained inside the equipment enclosure at a pressure above that of the surrounding atmosphere, in order to prevent ingress of dust.
ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT

The protection technique identification letter(s) is marked on the product. Products employing multiple protection techniques are marked with all applicable identifications. For example, a control station containing a flame-proof switch and an encapsulated pilot light, mounted in an increased safety enclosure, will be marked with all three protection techniques: “edn.”

TEMPERATURE CONSIDERATIONS

The marked temperature class (T-code) of the equipment is based on either the maximum external temperature or internal temperature of the equipment, depending on the protection technique used. The marking specifies the temperature class or operating temperature based on a +40°C (+104°F) ambient temperature, or based on the higher ambient temperature if the equipment is rated and marked for an ambient temperature of greater than +40°C (+104°F). For equipment rated and marked for an upper ambient temperature of less than +40°C (+104°F), the operating temperature or temperature class is still based on +40°C (+104°F).

For Class I, Zone 0, 1 and 2 and Zone 20, 21 and 22 locations, this temperature marking should not exceed the ignition temperature of the specific combustible material to be encountered. For organic dusts that may dehydrate or carbonize, the temperature marking should not exceed the lower of either the ignition temperature or 165°C. For fibers and flyings, the maximum permitted temperature is 120°C for equipment that is subject to overloading and 165°C for equipment that is not subject to overloading.

AMBIENT TEMPERATURES

Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -20°C (+4°F) to +40°C (+104°F). Equipment may be investigated and marked for a lower ambient temperature that is greater than -25°C (-13°F). While equipment may be marked for an upper ambient temperature that is less +40°C (+104°F), equipment is always investigated for an upper ambient temperature of at least +40°C (+104°F).

Use of flameproof equipment under conditions of higher than normal atmospheric pressure or oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within the equipment. Plastic parts of enclosures or encapsulating materials may not maintain their integrity in excessively high or low ambient, unless marked otherwise.

ENCLOSURE MODIFICATION AND MAINTENANCE

The integrity of an enclosure must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of a flameproof enclosure to contain an explosion. Most other protection techniques require a minimum IP rating and alterations in the enclosure may impair the enclosure’s ability to protect against ingress of contaminants or water. See ENCLOSEMENT CONSIDERATIONS FOR ALL EQUIPMENT below for more information. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS

Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present.

Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See ENCLOSEMENT CONSIDERATIONS FOR ALL EQUIPMENT below for more information.

ENCLOSEMENT CONSIDERATIONS FOR ALL EQUIPMENT

Section 110.11 of the NEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. Section 300.6 of the NEC provides guidance regarding protection against corrosion. To assist Authorities Having Jurisdiction, electrical equipment certified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with an enclosure type number(s). The following table summarizes the intended uses of the various enclosure types.

<table>
<thead>
<tr>
<th>Provides a Degree of Protection Against the Following Environmental Conditions</th>
<th>Type of Enclosure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incidental contact with the enclosed equipment</td>
<td>X X X X X X X X X X</td>
</tr>
</tbody>
</table>

The marked temperature class (T-code) of the equipment is based on a +40°C (+104°F) ambient temperature, or based on the higher ambient temperature if the equipment is rated and marked for an ambient temperature of greater than +40°C (+104°F). For equipment rated and marked for an upper ambient temperature of less than +40°C (+104°F), the operating temperature or temperature class is still based on +40°C (+104°F).

ENCLOSEMENT CONSIDERATIONS FOR ALL EQUIPMENT

In some cases, individual appliances and equipment may be marked “Raintight” or “Rainproof,” indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as “Raintight” such exposure will not result in entrance of water. For equipment designated as “Rainproof” such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.

Enclosures for indoor locations include Types 1, 2, 5, 7, 9, 12, 12K and 13; enclosures for indoor or outdoor locations include Types 3, 5R, 3S, 4X, 6P and 6P.

Additionally or alternatively, IEC 60529, “Degrees of Protection Provided by Enclosures (IP Code),” describes a system for classifying the degrees of ingress protection (or IP Code) provided by the enclosures of electrical equipment as follows:
EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

<table>
<thead>
<tr>
<th>Location Classification</th>
<th>Standard</th>
<th>Protection Technique Identification</th>
</tr>
</thead>
</table>

The basic hazardous (classified) locations standards used to investigate these products with respect to the risk of explosion for Zone 20, 21 and 22 are referenced below for the location classifications and protection techniques shown. Note that for all equipment ANSI/UL 60079-0, “Explosive Atmospheres — Part 0: Equipment — General Requirements,” or ANSI/ISA-61241-0 (12.10.02), “Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations – General Requirements,” is also used.

Note: The standard edition and any revision date, if applicable, of the basic hazardous (classified) locations standards used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Fittings at Supply Entries

Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, restrictions are intended to be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

Cable and Conduit Seals

Equipment with a factory-installed conduit seal is marked “Leads factory sealed,” or equivalent wording. The absence of this marking indicates that the need for a field-installed seal in accordance with Section 505.16 of the NEC should be determined.

Process-connected electrical equipment provided with seals to prevent the migration of process fluids into the electrical system are either the single-seal or dual-seal types. The construction, testing and marking requirements for process seals are found in ANSI/ISA-12.27.01, “Requirements for Process Sealing Between Electrical Systems and Flammable or Combustible Process Fluids.”

Protection of Equipment and Transmission Systems Using Optical Radiation

Equipment and transmission systems that use optical radiation and are intended for use in hazardous (classified) locations may pose a risk of ignition. This includes equipment and systems, which themselves are located outside the hazardous (classified) locations, but emit optical radiation enters such locations. The construction, testing and marking requirements that may be applied for such equipment and systems are found in ANSI/ISA-60079-28 (12.21.02), “Explosive Atmospheres – Part 28: Protection of Equipment and Transmission Systems Using Optical Radiation.” The protection technique identification for equipment and systems that comply with these requirements and that may be marked on the equipment include “op is,” “op pr,” or “op sh,” with the identified Zone dependent upon the design of the equipment.

Wiring Methods

Wiring methods permitted by the NEC for hazardous (classified) locations are, in general, more restrictive than those permitted for unclassified locations. Extra-hard-usage flexible cord is only permitted for connection of portable luminaires and other types of portable utilization equipment and the fixed portion of their supply circuit, or in other situations where flexibility is necessary for the installation as determined by the Authority Having Jurisdiction.

Requirements

The basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion for Class I, Zone 0, 1 and 2 are referenced below for the location classifications and protection techniques shown. Note that for all equipment, ANSI/UL 60079-0, “Explosive Atmospheres – Part 0: Equipment – General Requirements,” is also used.

Note: The standard edition and any revision date, if applicable, of the basic hazardous (classified) locations standards used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

Plumbing products include plumbing fixtures, fixture fittings, pipe and fittings, and appliances, as well as accessories associated with such equipment.

This equipment is intended for use only as described in the general Guide Information for each product category and individual certifications. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

**INVESTIGATION REQUIREMENTS AND STANDARDS**

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products; however, it is not necessarily indicative of limitations for those certified products. The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or ISO standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

**INSTALLATION REQUIREMENTS**

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use. Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.
These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS
These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the precautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS
The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not evaluate what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE
Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual certifications of the product, individual appliances have been investigated only for indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS
General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause current protective devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as “AL/ CU.”

Except as noted below or in the general Guide Information for certain product categories, the electrical terminal provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of both conductors, the equipment is marked for use only with conductors having the same temperature rating. If the equipment is marked only for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.15(B)(16) of ANSI/NFPA 70, “National Electrical Code” (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacities (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail lugs may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are certified for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size. Supply terminals of 15 A and 20 A switches and receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ AL” are for use with aluminum, copper and copper-clad aluminum conductors. Self-foamless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL/ CU” are for use with aluminum, copper and copper-clad aluminum conductors. Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitability for such locations. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAMMABLE AND COMBUSTIBLE LIQUIDS AND GASES EQUIPMENT (AAPQ)

GENERAL
This equipment is intended for the storing, containing, conveying, dispensing, regulating or use of flammable and combustible gases, liquids or waste materials. This equipment also includes chemical products that are certified with respect to fire hazard.

This equipment is intended for use only with the liquids and gases described in the general Guide Information for each product category and individual certifications. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other liquids and gases, and in conditions other than described in the instructions and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS
The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or IES standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are expected as national or regional standards.

INSTALLATION REQUIREMENTS
The limitations for the equipment are based on the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

INSTRUCTIONS AND PRODUCT MARKINGS
These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the precautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS
The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switch-
board may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

**INDOOR AND OUTDOOR USE**

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual certifications of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

**ELECTRICAL INSTALLATIONS**

**General** — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

**Supply Conductors** — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU." Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating, the 60°C ampacities (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code" (NEC), should be used to determine the wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

**Terminations** — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are certified for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

**Hazardous Locations** — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ACCESS CONTROL SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (AAAT)**

**USE**

This category covers units for access control systems, providing a means of regulating or controlling entry into an area, or access to or the use of a device by electrical, electronic and/or mechanical means.

Intrinsically safe systems covered under this category have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Access Control System Unit for Use in Hazardous Locations
- Access Control System (Associated Apparatus)
- Access Control System Unit (Associated Apparatus)
- Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment and Appliances for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 294, "Access Control System Units."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Access Control System Unit for Hazardous Locations," "Access Control System (Associated Apparatus)" or "Access Control System Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

**ADVERTISING DISPLAYS, NONILLUMINATED (AAVU)**

**USE**

This category covers electrically operated, nonilluminated units intended to draw attention to, or to display, demonstrate or advertise products.

Advertising displays intended for permanent installation indoors only are so marked. Cord-and-plug-connected advertising displays suitable for outdoor use are marked "Outdoor."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Advertising Display
- Animated Display
- Nonilluminated Advertising Display
- Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Advertising displays including illumination are covered under Signs (USTF). Advertising displays that include a changing-message sign are covered under Signs (UXYT) and Signs, Changing Message (UYFS).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ).
AIR CONDITIONING EQUIPMENT (AAYZ)

ACCESSORIES, AIR CONDITIONING EQUIPMENT (ABFY)

**GENERAL**

This category covers accessories intended for installation only on certified equipment as designated in the individual certifications of the equipment and accessory. These accessories are intended primarily for field installation, but may be factory installed.

The equipment on which an accessory covered under this category may be field installed is marked to indicate that it is certified for use with the specific accessory as designated by model, catalog number, part number, etc. in this category. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory. For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.15(B)(16) of ANSI/NFPA 70, “National Electrical Code,” as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Air-conditioning-equipment Accessory

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Air Conditioning Equipment Accessory.”

**ACCESSORIES, AIR-DUCT MOUNTED (ABQK)**

**PRODUCT CATEGORIES BY CATEGORY CODE**

**PRODUCT MARKINGS**

Information concerning wire connections, mounting location, installation clearances, etc., are either marked on the accessory and/or in detailed installation instructions accompanying each accessory.

Products intended for use with germicidal lamps are marked “This product (fixture) is designed for use with germicidal lamps and must be installed in compliance with competent technical directions so that the user’s eye and bare skin will not be subjected to ultraviolet rays.”

**FACTORS NOT INVESTIGATED**

The health aspects associated with the use of these products and their ability to aid in disinfection of environmental air have not been investigated. This limitation is specified in the instruction manual and on the product for all products covered under this category.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Air-duct-mounted Accessory

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic standards used to investigate products employing ionization tubes in this category are ANSI/UL 1995 and ANSI/UL 867, “Electrostatic Air Cleaners.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

AS TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY
AIR CONDITIONERS, PACKAGED TERMINAL (ACKZ)

GENERAL

This category covers packaged terminal air conditioners and packaged terminal heat pumps. They consist of a wall sleeve, outdoor louvers, and a combination of assemblies designed as a unit and intended for mounting through the wall. They include refrigeration components as the prime source of cooling and dehumidification. They may also have provision for heating by hot water, reverse cycle refrigeration, steam, electric resistance heat or gas-fired burner(s). These units employ alternating current, hermetic refrigerant motor compressors with factory charged refrigeration systems and include a means for ventilation and circulating air. Accessories intended for use with packaged terminal air conditioners are also covered under this category.

This category does not cover equipment intended for connection to duct systems for the purpose of providing central cooling and/or heating.

INSTALLATION

This equipment is rated 600 V or less and intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code." It is intended for installation through walls and basically intended to serve a single room, zone or space, although some units may have provision to additionally serve an adjacent room. Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

Units employing gas heat are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, "National Fuel Gas Code.

PRODUCT MARKINGS

Cord-connected units that require a circuit breaker or time-delay fuses to permit restarting are so marked.

Units with water cooled condensers investigated for connection to ground water sources are so marked.

Some equipment may be designed to accept accessories in the field. In such cases, both the air conditioner and the accessory are marked to relate the two for proper installation.

This equipment typically consists of multiple assemblies or sections that are shipped in separate packages to be assembled in the field. The sections are marked to relate to one another for proper installation. The section incorporating the primary nameplate contains an essential elements label that details the other sections needed to complete the installation.

FACTORS NOT INVESTIGATED

The effect of these units on the fire-resistance rating of the wall has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Packaged Terminal Air Conditioner

Cooling Portion of Packaged Terminal Air Conditioner

Gas-heating Portion of Packaged Terminal Air Conditioner (for the gas-heating portion of these products)

Packaged Terminal Air Conditioner

Packaged Terminal Heat Pump

Section of Packaged Terminal Air Conditioner

RELATED PRODUCTS

See Air Conditioners, Room (ACOT) and Gas-fired Room Heaters, Vented (LPNH).
conditioned. They may also be split-system, where the evaporator section is installed inside, and the condensing unit is installed outside. The two sections are connected by refrigerant piping and electrical wiring. A console or in-wall-type room air conditioner may have provision to add a single adjacent room.

Split-system room air conditioners are designed for field interconnection with a matching section. Such units and sections are marked to relate the two for proper installation. The sections may be shipped separately.

RV air conditioners are intended for roof-top or underfloor mounting as indicated in the installation instructions, and are intended only for permanent connection to the source of electrical supply.

These units employ hermetic refrigerant motor-compressors with factory-charged refrigeration systems and include a means for circulating air. They may also have provision for electric heating, reverse cycle heating, and ventilation. Room air conditioners are not intended for connection to duct systems for the purpose of providing central cooling and/or heating. RV air conditioners may be ducted to remote areas of the vehicle as specified in the installation instructions, which include the minimum duct size, maximum length, and minimum register size.

Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

Cord-connected room air conditioners are provided with instructions regarding the use of extension cords. If the use of an extension cord is not recommended, the instructions state this. Recommendations for an extension cord specify the use of a cord set with an equipment grounding conductor, grounding-type attachment plug and grounding-type connector, and the ampacity and voltage rating of the cord set.

The U.S. Environmental Protection Agency’s Significant New Alternatives Policy (SNAP) Program requirements should be consulted for room air conditioners in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Cord-connected units that require circuit breakers or time-delay fuses to permit restarting are so marked.

Units with water-cooled condensers investigated for connection to ground water sources are so marked.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the room air conditioner and the accessory are marked to relate the two for proper installation.

If parts or sections of the room air conditioner are separately shipped from the factory, they are marked to relate the sections to one another for proper installation.

PRODUCT IDENTITY

The following product identity appears on the product:

Accessory for Room Air Conditioner
Room Air Conditioner
Section of Room Air Conditioner
Split-system Air Conditioner
Split-type Air Conditioner

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

RELATED PRODUCTS

Packaged terminal air conditioners are covered under Air Conditioners, Room (ACOT).

Packaged Terminal (ACKZ).

Air conditioners for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose (ACVS). Dehumidifiers are covered under Dehumidifiers, Refrigeration Type (AFIT).

Products Verified for energy efficiency are covered under Air Conditioners, Room Verified for Energy Efficiency (ZWA).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AACH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 484, “Room Air Conditioners.”

Split-system air conditioners may be investigated to ANSI/UL 1995, “Heating and Cooling Equipment.”

In permanently connected units employing two or more motors or a motor(s) and other loads, operating from a single supply circuit, the motor overload protective devices (including thermal protectors for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of compliance with the motor branch circuit short-circuit and ground-fault protection requirements of Section 430.53(C) of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or circuit breakers with a rating that does not exceed the value marked on the data plate.

This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable.

Accessories for special purpose air conditioners are provided with instructions for installation into the product.

Units suitable for use with certified field-installed accessories, such as electric resistance heaters, are specifically indicated in the individual certifications.

The U.S. Environmental Protection Agency’s Significant New Alternatives Policy (SNAP) Program requirements should be consulted for special-purpose air conditioners in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Units suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

Some equipment is designed to accept accessories installed in the field. In such cases, both the air conditioner and the accessory are marked to relate the two for proper installation.

Where a clearance is required to be maintained to combustible construction, the minimum clearance is designated in the individual certifications and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than “zero”) are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test
Air Conditioners, Special Purpose (ACVS)−Continued

PRODUCT IDENTITY
One of the following product identities appears on the product:

- Accessory for Special-purpose Air Conditioner
- Section of Special-purpose Air Conditioner
- Special-purpose Air Conditioner

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
See Air Conditioners, Room (ACOT), Air Conditioners, Packaged Terminal (ACKZ), Dehumidifiers, Refrigeration Type (AFFT) and Heating and Cooling Equipment (LZFE).

Equipment without a refrigeration system is covered under Heating and Cooling Equipment (LZFE).

Permanently connected computer room air conditioners are covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION
For additional information, see Air Conditioning Equipment (AAYZ), Electrical Equipment for Use in Ordinary Locations (AAL2) and Heating, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. This certification mark includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL/INDUSTRIAL INDOOR AIR QUALITY SYSTEMS, OZONE-GENERATING TYPE (ACVZ)

GENERAL
This category covers commercial/industrial indoor air quality systems of the ozone-generating type. These products are intended to be permanently connected within the indoor air-handling system and consist of both the air quality appliance and its associated sensors/detectors and the controls necessary for ozone monitoring and appliance adjustment and/or shutdown. Equipment covered under this category is not intended to be portable or for use within:

- Hospitality and institutional facilities having sleeping quarters, such as hotel guest rooms, nursing homes and dormitories
- Healthcare facilities, such as hospitals
- Preschool, primary and secondary educational institutions

This equipment does not rely on wireless transmission of signals, is not battery operated and does not employ ultraviolet (UV) lamps.

FACTORS NOT INVESTIGATED
The equipment performance and/or effectiveness of the air quality produced has not been investigated.

The physiological effects of the operation of this equipment, beneficial or otherwise, have not been investigated.

PRODUCT IDENTITY
The following product identity appears on the product:

Commercial/Industrial Indoor Air Quality System, Ozone-generating Type

RELATED PRODUCTS
- Commercial/Industrial Indoor Air Quality Systems, Ozone-generating Type (ACVZ)−Continued

Commercial/Industrial Indoor Air Quality Systems, Ozone-generating Type (ACVZ)−Continued

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/ germicidal lamps are covered under Air-filtering Appliances (AEDX).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOQX).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air-ducted Mounted (ABQK).

Ionizers, fans employing ionizers, and ion generators are covered under Ionizers/Generators (ΟΕΙ). Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment (QQCH).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 687, “Electrostatic Air Cleaners,” in addition to the requirements contained in UL 687A, “Outline of Investigation for Commercial/Industrial Indoor Air Quality Systems, Ozone Generating Type.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED TERMINAL AIR CONDITIONERS REPLACEMENT (ADAU)

GENERAL
This category covers replacement packaged terminal air conditioner and replacement packaged terminal heat pump chassis investigated for field installation with existing wall sleeves, louvers, and panels as marked on the unit. They are rated 600 V or less and intended as the prime source of air conditioning and dehumidification.

These units may also have provision for heating by hot water, reverse-cycle refrigeration, steam or electric resistance elements. They employ alternating current, hermetic refrigerant motor- compressors with factory-charged refrigeration systems, and include a means for ventilating and circulating air.

INSTALLATION
This equipment is intended to be installed in accordance with ANSI/ NPGA 70, “National Electrical Code,” and is intended for installation through walls and to serve a single room, zone or space, although some units may have provision to additionally serve an adjacent room.

Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

PRODUCT MARKINGS
Cord-connected units requiring a circuit breaker or time-delay fuses to permit restarting are so marked.

Units are marked with the existing wall sleeves, louvers and panels with which they are to be used and field installed.

PRODUCT IDENTITY
The following product identity appears on the product:

Replacement Packaged Terminal Air Conditioner

RELATED PRODUCTS
Room air conditioners are covered under Air Conditioners, Room (ACOT).

Air conditioners intended for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose (ACVS).

Dehumidifiers are covered under Dehumidifiers, Refrigeration Type (AFFT).
AIR CONDITIONING EQUIPMENT (AAYZ)

Packaged Terminal Air Conditioners, Replacement (ADAU)\--Continued

Air-conditioning equipment designed for connection to duct systems for the purpose of providing central cooling and/or heating is covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION
For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHK) and Electrical Equipment for Use in Ordinary Locations (AAAL).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 484, “Room Air Conditioners.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:

FOR FIELD INSTALLATION WITH EXISTING WALL SLEEVES, OUTDOOR LOUVERS, AND INDOOR PANELS AS SPECIFIED ON THE PRODUCT AS TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY
Alternate UL Mark

UL MARK
The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REPLACEMENT PACKAGED TERMINAL AIR CONDITIONER FOR FIELD INSTALLATION WITH EXISTING WALL SLEEVES, OUTDOOR LOUVERS, AND INDOOR PANELS AS SPECIFIED ON THE PRODUCT AS TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR FILTERING APPLIANCES (AEDX)\--Continued

Air Filtering Appliances (AEDX)

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AAAL) and Heating, Cooling, Ventilating and Cooking Equipment (AAHK).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 507, “Electric Fans.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Air Filtering Appliance” or “Air Filter,” or other appropriate product name as shown in the individual Listings.

DEHUMIDIFIERS, REFRIGERATION TYPE (AFFT)

GENERAL
This category covers portable, self-contained household, commercial and industrial dehumidifiers for use in removing moisture from the air. These dehumidifiers are designed for cord connection to single-phase, alternating-current circuits rated not more than 20 A, 125 V or 15 A, 208 or 230 V. They employ hermetic refrigerant motor-compressors and may also incorporate electric air heaters.

These dehumidifiers are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY
One of the following product identities appears on the product:

Dehumidifier (for a household unit)
Special-purpose Dehumidifier (for a commercial or industrial unit)

RELATED PRODUCTS
Air conditioners intended for spot cooling are covered under Air Conditioners, Special Purpose (ACVS).

Desiccant-type dehumidifiers with a heater are covered under Heaters, Specialty (KSQI).

Duct-mounted and permanently connected dehumidifiers are covered under Heating and Cooling Equipment (LZFE).

See Air Conditioners, Room (ACO).

Products Verified for energy efficiency are covered under Dehumidifiers, Refrigeration Type Verified for Energy Efficiency (ZWH).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AAAL) and Heating, Cooling, Ventilating and Cooking Equipment (AAHK).

The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

LOOK FOR THE UL MARK ON PRODUCT
ELECTROSTATIC AIR CLEANERS (AGGZ)

GENERAL

This category covers duct type, room type (fixed), stationary and portable electrostatic air cleaners intended to remove airborne dust particles and the like.

This category also covers accessories intended for field installation on specific certified electrostatic air cleaners. They are marked to indicate the associated certified equipment by model, catalog number, part number, or other identifier as appropriate. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed. Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

Dust-type electrostatic air collectors that may be used in exhaust systems of restaurant-type cooking equipment are so marked. These air cleaners are intended for installation in accordance with ANSI/NFPA 96, “Ventilation Control and Fire Protection of Commercial Cooking Operations.” When installed in accordance with ANSI/NFPA 96, certified grease filter or extractor must be installed ahead of the air cleaner.

Room-type electrostatic air cleaners are self-contained units; the fixed types are intended for permanent installation. Portable or stationary types are cord connected.

Electrostatic air collectors are intended for use where removal of dust and dirt from equipment is frequent enough to prevent excessive accumulation, which may result in flashover and fire damage. The instructions and warnings supplied with and on each piece of equipment should be carefully observed.

Electrostatic air cleaners have either Class 1 or Class 2 filters or adhesive-coated ionizer collector cells as follows:

Class 1 filters or adhesive-coated ionizer collector cells are those which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.

Class 2 filters or adhesive-coated ionizer collector cells are those which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke, or both.

Electrostatic air cleaners designed to be assembled together in the field from component parts are listed by UL. Under this form of certification, the same requirements as new electrostatic air cleaners.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Electrostatic Air Cleaner

Electrostatic Air-cleaner Accessory

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

RELATED PRODUCTS

Ionizers, fans employing ionizers, and ion generators are covered under Ion Generators (OETX).

AIR CONDITIONING EQUIPMENT (AAYZ)

Dehumidifiers, Refrigeration Type (AFFT)—Continued

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dehumidifier” for a household unit, or “Special Purpose Dehumidifier” for a commercial or industrial unit.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

PRODUCT MARKINGS

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

EVAPORATIVE COOLER RETROFIT PUMPS (AGIS)

USE AND INSTALLATION

This category covers pumps intended to replace the original pumps provided in certified evaporative coolers and pumps meant as retrofit pumps providing additional functionality, such as the timed purging of evaporative-cooler reservoirs. They do not require qualified service personnel for installation when the evaporative cooler is provided with a receptacle intended for cord-and-plug connection of the pump. For installations where the pump is not provided with a plug or where the plug must be cut off and an existing cord-and-plug connection attached to it, regular testing of any GFCI protecting the pump is either marked on the pump packaging or provided in detailed installation instructions accompanying each pump.

PRODUCT IDENTITY

The following product identity appears on the product:

Evaporative Cooler Retrofit Pump

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
EVAPORATIVE COOLERS (AGNY)

USE AND INSTALLATION

This category covers evaporative coolers of portable, window and stationary types for residential, commercial and industrial applications. Stationary types may have provision for connection to a duct system for air distribution. Models investigated for outdoor installation are marked “Outdoor Use.” Motors used in stationary equipment intended for duct system connection are prevented from hazardous overheating by inherent overheating devices, by overcurrent protective devices, or by impedance of the motor windings.

Units permanently connected to the source of supply are intended to be installed in accordance with the requirements of ANSI/NFPA 70, “National Electrical Code.” Evaporative media provided on stationary units that are intended for connection to a duct system in accordance with the “International Mechanical Code,” ANSI/NFPA 90A, “Installation of Air Conditioning and Ventilating Systems,” or ANSI/NFPA 90B, “Installation of Warm Air Heating and Air Conditioning Systems,” are certified to UL 900, “Air Filter Units.” These products are also suitable for installation in accordance with the “Uniform Mechanical Code.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Evaporative Air Cooler
- Evaporative Cooler

RELATED PRODUCTS

Some stationary, duct-connected evaporative coolers are covered under Evaporative Coolers Certified to the Uniform Mechanical Code (ACOS). Air coolers that include a motor compressor and refrigeration system are covered under Room Air Conditioners (ACOT).

Products intended primarily for circulating moistened air are covered under Humidifiers (AHIV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 998, “Humidifiers.”

The basic standard used to investigate filters provided on stationary-type humidifiers in this category is ANSI/UL 900, “Air Filter Units.”

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

HUMIDIFIERS (AHIV)

GENERAL

This category covers humidifiers intended for residential and commercial applications that circulate moistened air and generally incorporate an air-circulating fan with or without filters. Stationary types may have provision for connection to heating and ventilating ducts for air distribution. Motors used in stationary equipment intended for duct connection are prevented from hazardous overheating by inherent overheating devices, overcurrent protective devices, or inherent impedance. Impedance-protected motors do not generate smoke during locked-rotor testing.

PRODUCT IDENTITY

The following product identity appears on the product:

- Humidifier

RELATED PRODUCTS

Evaporative coolers are covered under Evaporative Coolers (AGNY) and Evaporative Coolers Certified to the Uniform Mechanical Code (ACOS). Vaporizers are covered under Vaporizers (YEIV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 998, “Humidifiers.”

The basic standard used to investigate filters provided on stationary-type humidifiers in this category is ANSI/UL 900, “Air Filter Units.”

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Humidifier.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMAL AISLE CONTAINMENT SYSTEMS (AHJG)

GENERAL

This category covers thermal aisle containment systems, an HVAC method deployed in the occupied area of an air-cooled ITE space utilizing physical separation of hot exhaust air from cooler intake air between equipment cabinets, rows of ITE, associated power and cooling infrastructure. Containment is typically above, and at both ends of a cold aisle or cold aisle, in whole or in part. Dropouts for use beneath automatic sprinklers may be employed along with any necessary power supplies and/or other electrical devices and hardware.

This category also covers accessories intended for use with thermal aisle containment systems.

INSTALLATION

This equipment is rated 600 V or less and is intended for installation in accordance with ANSI/NFPA 70, “Fire Protection of Information Technology Equipment,” and ANSI/NFPA 70, “National Electrical Code” (NEC), including Article 645, “Information Technology Equipment.”

A thermal aisle containment system may be shipped from the factory unassembled, or disassembled to the degree necessary to facilitate shipment. In some cases, subassemblies may be shipped separately for final assembly at the installation site. In these cases, the following apply:

1. All of the parts are furnished or specified by the manufacturer.
2. The specific location of the assembly in the thermal aisle containment system and their method of installation are predetermed by the manufacturer and are not dependent upon the installation person.
3. Electrical connections used to connect the field-installed components are accomplished by means of plugs and receptacles, wiring terminations, or other means that are in compliance with the NEC.

HUMIDIFIERS (AHIV) Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 998, “Humidifiers.”

The basic standard used to investigate filters provided on stationary-type humidifiers in this category is ANSI/UL 900, “Air Filter Units.”

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Humidifier.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Thermal Aisle Containment Systems (AHJG)–Continued

4. Detailed step-by-step installation instructions are provided in the form of installation instructions or a detailed installation practice.

5. Parts and subassemblies are marked with the manufacturer's name or logo, and a part number (P/N) or other type designation. These parts and subassemblies are identified in an "essential elements" label located on one central part of the system.

The proper method of electrical installation (number of branch circuits, disconnects, control-wiring connections, etc.) is shown on the wiring diagram(s) and/or marking required to be attached to the system.

Accessories for thermal aisle containment systems are provided with instructions for installation into the product.

Units suitable for use with certified field-installed accessories are specifically indicated in the individual certifications.

The installation and arrangement of the thermal aisle containment system should not interfere with exits already provided in the ITE room.

**FIRE-RESISTANCE RATINGS**

**PRODUCT MARKINGS**

This equipment typically consists of multiple parts or subassemblies that are shipped separately to be assembled in the field. The parts and subassemblies are marked to relate to one another for proper installation. One of the primary subassemblies contains an "essential elements" label that details the other parts and subassemblies needed to complete the installation.

Some equipment is designed to accept accessories installed in the field. In such cases, the accessory is marked to relate the two for proper installation.

One of the following product identities appears on the product:

- Accessory for Thermal Aisle Containment System
- Section of Thermal Aisle Containment System
- Thermal Aisle Containment System

**RELATED PRODUCTS**

See Air Conditioners, Room (ACOT), Air Conditioners, Packaged Terminal (ACK2), Dehumidifiers, Refrigeration Type (AFFT) and Heating and Cooling Equipment (LZFE).

Special-purpose air conditioners are covered under Air Conditioners, Special Purpose (ACVS).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermal Aisle Containment System," "Section of Thermal Aisle Containment System," or "Accessory for Thermal Aisle Containment System."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELEVATOR AND ESCALATOR SYSTEMS, SUBSYSTEMS, COMPONENTS AND FUNCTIONS (AECO)**

**GENERAL**

This category covers elevator and escalator systems, subsystems, components and related functions investigated for conformance to ASME A17.7/CSA B44.7, “Performance-Based Safety Code for Elevators and Escalators.” Elevator and escalator systems include subsystems, components and functions investigated as complete units. Subsystems, components and functions of a system are specifically designated in the installation instructions provided with the system.

Where an elevator system is designated as a “model elevator,” it is considered representative of series-produced elevators with the same design and configuration. All permitted variations between the model elevator and the installed elevators are clearly specified with minimum and maximum values, features, etc. in the technical documentation accompanying the Certificate of Conformance.

Continued surveillance of the manufacturer of approved designs of systems, subsystems, components and functions is a part of this program.

Inspections and tests of representative installations are made to determine the correctness of installation of subsystems, components and functions, wiring, quality of workmanship, operability of circuits, and maintenance.

This category does not cover the investigation of the design, construction, operation, inspection, testing, maintenance, alteration, or repair of elevator and escalator systems, subsystems, components and related functions using the conventional process of implementing ANSI/ASME A17.1/CSA B44, “Safety Code for Elevators and Escalators” (Option 1 as described in ASME A17.7/CSA B44.7).

**RELATED PRODUCTS**

Certain elevator and escalator products may be certified using the requirements contained in various UL Standards and/or ANSI/ASME A17.1/CSA B44. These certifications are covered under various product categories.

The following is a partial list of where information can be found on these products:

- Elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment are covered under Elevator Control Panels (FOQP).
- Elevator control panels intended for use in hazardous (classified) locations are covered under Elevator Control Panels for Use in Hazardous Locations (FSPN). Elevator control panels relating to hazardous (classified) locations that are intended for installation in hazardous locations are covered under Elevator Control Panels Relating to Hazardous Locations (FSSA).
- Accessories and controllers intended for use in elevator applications, including elevator accessories such as push buttons, indicator lights and locks, and elevator controls such as power supplies (motor and door operators) are covered under Elevator Controls and Accessories (FQMW).
- Elevator hoistway door interlocks and elevator hoistway door combination mechanical locks and electric contacts are covered under Elevator Door-landing Devices and Contacts (FQNZ).
- Elevator door-locking devices and contacts intended for use in hazardous (classified) locations are covered under Elevator-door-locking Devices and Contacts for Use in Hazardous Locations (FSSN).
- Switches intended for use with elevator system cars or shafts are covered under Elevator Switches (FRAH).
- Passenger elevator car enclosures incorporating materials and equipment such as decorative panels, suspended ceilings and luminaires are covered under Passenger Elevator Car Enclosures (FRRB).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Mechanical Equipment and Associated Products (AAMB) and Building Materials (AABM).

**REQUIREMENTS**

The basic standards used to investigate products in this category are:

- ANSI/ASME A17.5/CSA B44.1, “Elevator and Escalator Electrical Equipment”
- ANSI/ASME A17.7/CSA B44.7, “Performance-Based Safety Code for Elevators and Escalators”

**CERTIFICATE OF CONFORMANCE**

The Certificate of Conformance serves as evidence that a representative sample of the elevator or escalator system, subsystem or component and related functions has been investigated for conformance to ASME A17.7/CSA B44.7.

The Certificate (and accompanying documents, if any) is intended to provide Authorities Having Jurisdiction with basic information on the requirements for installation and maintenance of an elevator or escalator system, subsystem or component and related functions for conformance to ASME A17.7/CSA B44.7.

The Certificate does not cover the final installation of the entire elevator or escalator equipment in the building or structure.

The Certificate includes:

1. the name and address of the a. manufacturer of the subsystem, component or function, and the
name and address of the applicant (if other than the manufacturer), or
2. the scope of the certification, including, as appropriate,
   a. the product(s) certified, which is permitted to be identified by
type or range of products. Where the certification is for a function,
   the product identity includes the word “function”;
   b. relevant parts of ASME A17.7/CSA B44.7 (e.g., GESRs, SPs) to
   which each product or product type is certified, and
   c. statement of compliance with ASME A17.7/CSA B44.7;
   d. where the certification is for a function, the identity of all of the
   components, firmware, software, etc., associated with the function;
   and
3. the effective date of the Certificate and the term (time limit), or expi-
ration date;
4. a unique Certificate number;
5. critical information related to installation or maintenance and any
   conditions or limitations on the installation and use of the product(s).

In addition to the Certificate of Conformance, the Certification Mark of
UL also appears on the subsystem or component and is the only method
provided by UL to identify subsystems or components manufactured
under its Certification and Follow-Up Service. The Certification Mark for
these products includes the UL symbol, the word “CERTIFIED” and
“SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the
following information:

[PRODUCT IDENTITY, MODEL, STYLE, etc.]
ASME A17.7/CSA B44.7
Certificate No. ________________

The Certificate number identifies the Certificate(s) of Conformance that
contains the basic information on the use of the product in the elevator
system, and the requirements for installation and maintenance of an eleva-
tor or escalator system, subsystem or component and related functions for
conformance with the requirements of ASME A17.7/CSA B44.7.

If a component or subsystem is certified for use with more than one sys-
tem, the Certification Mark may contain more than one Certificate number.

Where the certification is for a function, the Certification Mark appears
on each of the critical parts associated with the function or on a major
part of the system incorporating key components of the function (such as
a control panel). The product identity includes the word “Function” (e.g.,
“Function Software,” “Switch Override Function”) and the Certificate
identifies all of the components, firmware, software, etc., associated with the
function.

Alternate UL Mark
In addition to the Certificate of Conformance noted above, the Classifica-
tion Mark of UL also appears on the subsystem or component and is the
only method provided by UL to identify subsystems or components
manufactured under its Classification and Follow-Up Service. The Classifi-
cation Mark for these products includes the UL symbol, the word “CLAS-
SIFIED” above the UL symbol (as illustrated in the Introduction of this
Directory), and the following additional information:

[PRODUCT IDENTITY, MODEL, STYLE, etc.]
IN ACCORDANCE WITH ASME A17.7/CSA B44.7
Certificate No. ________________

The Certificate number identifies the Certificate(s) of Conformance that
contains the basic information on the use of the product in the elevator
system, and the requirements for installation and maintenance of an eleva-
tor or escalator system, subsystem or component and related functions for
conformance with the requirements of ASME A17.7/CSA B44.7.

If a component or subsystem is certified for use with more than one sys-
tem, the Classification Mark may contain more than one Certificate number.

Where the certification is for a function, the Classification Mark appears
on each of the critical parts associated with the function or on a major
part of the system incorporating key components of the function (such as
a control panel). The product identity includes the word “Function” (e.g.,
“Function Software,” “Switch Override Function”) and the Certificate
identifies all of the components, firmware, software, etc., associated with the
function.

* * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does
not assume or undertake to discharge any responsibility of the manufac-
turer or any other party. UL shall not incur any obligation or liability for
any loss, expense or damages, including incidental or consequential dam-
ages, arising out of or in connection with the use, interpretation of, or reli-
ance upon this Guide Information.

AIR CONDITIONING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (AHSY)

AIR CONDITIONERS FOR USE IN HAZARDOUS LOCATIONS (AIDR)

Room Air Conditioners for Use in Hazardous Locations

This category covers room air conditioners for use in hazardous loca-
tions. They are encased assemblies designed as a unit and intended as the
prime source of refrigeration and dehumidification, basically intended to
serve a single room, zone or space. They are intended for installation in
windows or through walls. These units employ alternating-current, her-
metic refrigerant motor-compressors with factory-charged refrigeration
systems and include a means for circulating air. The effect of in-wall units
on the fire resistance rating of the wall has not been investigated.

Permanently connected units are intended to be connected only to a
branch circuit protected by overcurrent devices which do not exceed the
value marked on the data plate or attached wiring diagram. The marked
branch circuit overcurrent device protection is the maximum for which the
unit has been investigated. If time-delay fuses are required for starting,
the unit is marked to this effect.

Cord-connected units that require a time-delay fuse or circuit breaker
to permit motor restarting are marked to this effect.

Some room air conditioners may be designed for installation with the
indoor side being located in a room purged and pressurized in accordance
with ANSI/NFPA 496, “Purged and Pressurized Enclosures for Electrical
Equipment,” to become an unclassified location, and the outdoor side in a
Division 2 hazardous (classified) location. Marking on the product and in
the installation instructions identifies units intended for this use.

PRODUCT IDENTITY
The following product identity appears on the product:
Room Air Conditioner for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to
Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).  

REQUIREMENTS
The basic unclassified locations standard used to investigate products in
this category is ANSI/UL 484, “Room Air Conditioners.”

The basic hazardous (classified) locations standards used to investigate
products in this category are referenced in Equipment for Use in and
Relating to Class I, II and III, Division 1 and 2 Hazardous Locations
(AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method pro-
vided by UL to identify products manufactured under its Certification and
Follow-Up Service. The Certification Mark for these products includes the
UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic iden-
tifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by
UL to identify products manufactured under its Listing and Follow-Up
Service. The Listing Mark for these products includes the UL symbol (as
illustrated in the Introduction of this Directory) together with the word
“LISTED,” a control number, and the product name “Room Air Condi-
tioner for Use in Hazardous Locations.”

* * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does
not assume or undertake to discharge any responsibility of the manufac-
turer or any other party. UL shall not incur any obligation or liability for
any loss, expense or damages, including incidental or consequential dam-
ages, arising out of or in connection with the use, interpretation of, or reli-
ance upon this Guide Information.

AIR-FILTERING APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (AIXS)

GENERAL
This category covers portable and stationary air-filtering appliances
intended for window, floor, table and similar mounting. The appliances
consist primarily of air-circulating fans and mechanical filters.

PRODUCT IDENTITY
The following product identity appears on the product:
Air-filtering Appliance for Use in Hazardous Locations

ADDITIONAL INFORMATION
**AIR-SAMPLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (ALOA)**

**GENERAL**
This category covers air-sampling pumps, sample-draw pumps and similar equipment.

**PRODUCT IDENTITY**
One of the following product identities appears on the product:
- Air-sampling Equipment for Use in Hazardous Locations
- Air-sampling Pump for Use in Hazardous Locations

Other product identities may be used as shown in the individual listings.

**RELATED PRODUCTS**
Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

**ADDITIONAL INFORMATION**
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**
The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and the product name “Air Filtering Appliance for Use in Hazardous Locations,” or other appropriate product name as shown in the individual listings.

**UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.**

**ALARM SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (ALSY)**

**GENERAL**
This category covers electronic units, including those which utilize rays (photoelectric), electromagnetic waves, ultrasonic radiation, or other electronic principles to signal intrusion or movement within mercantile premises or approaches to safes, stockrooms, etc., that may be used to form a complete protective system.

These units have been investigated for fire, electrical shock, and reliability of operation. The effect of radiation on radio communication or radio navigation has not been investigated.

The Federal Communications Commission should be consulted for regulations governing the use and operation of radiation devices.

**PRODUCT IDENTITY**
One of the following product identities appears on the product:
- Intrusion Detection Unit
- Intrusion Detection Unit for Use in Hazardous Locations
- Intrusion Detection Unit (Associated Apparatus)
- Intrusion Detection Unit Accessory

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Intrusion Detection Unit,” “Intrusion Detection Unit Power Supply” or “Intrusion Detection Unit Accessory.”

The product name may be followed by “for Use in Hazardous Locations” or “(Associated Apparatus).”

**UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.**

**ALTERNATORS FOR USE IN HAZARDOUS LOCATIONS (ARDK)**

**GENERAL**
This category covers electric alternators intended for use in hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally-enclosed type. The Group designation is marked unless the alternator is acceptable for Groups A, B, C and D. The alternator is also marked with the operating temperature code designating the maximum internal or external surface temperature determined at rated amperes marked on the alternator, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically-sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure.

For Class II, Division 2 Locations, the enclosure is of the totally enclosed type. The alternator is marked with the operating temperature or operating temperature code designating the maximum external temperature deter-
mined at rated amperes (as marked on the alternator), when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Alternative for Use in Hazardous Locations (ARDK)

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ). This category is ANSI/UL 508, “Industrial Control Equipment.” The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.” The basic hazardous (classified) locations standard used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Alternator for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**AMUSEMENT AND GAMING MACHINES (ASMU)**

**GENERAL**

This category covers self-contained commercial amusement and gaming machines.

**PRODUCT IDENTITY**

The appliances are marked on or adjacent to the electrical rating plate with one of the following: “Suitable for Indoor Use Only,” “Suitable for Protected Locations — See Installation Instructions” or “Suitable for Outdoor Use.” Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer’s recommendations concerning the use of installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

**REBUILT PRODUCTS**

This category also covers amusement and gaming machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt amusement and gaming machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt amusement and gaming machines are subject to the same requirements as new amusement and gaming machines.

**FACTORS NOT INVESTIGATED**

The burglary- and theft-protection features of coin-operated machines have not been investigated unless specifically indicated in the individual certifications.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Amusement Machine
Gaming Machine

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Refurbished” precedes the product identity.

**REQUIREMENTS**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

**ADDITIONAL INFORMATION**

The basic standard used to investigate products in this category is ANSI/UL 508. "Amusement and Gaming Machines.”

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Amusement Machine,” “Gaming Machine,” or “Rebuilt” and “Remanufactured” or “Refrubished” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ANTENNA-DISCHARGE UNITS (ASWA)**

**USE**

This category covers antenna-discharge units intended to minimize the effects of voltage surges on antenna-transmission lines. These products have not been investigated to determine their suitability as lightning-protective devices.

**PRODUCT IDENTIFY**

The following product identity appears on the product:

Antenna-Discharge Unit

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 452, “Antenna-Discharge Units.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Antenna Discharge Unit,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**APPLIANCE CONTROLS (ATNZ)**

**GENERAL**

This category covers controllers (single device or interconnected series of components) with one or more input power and possibly signal ports. Included are controllers with solid-state circuitry, and one or more output switching components to directly control all or a portion of household-type appliances, such as portable luminaires, audio/video equipment, etc. These controllers typically respond directly or indirectly to sensors or remote control signals to affect operation or electronically store or process information by virtue of a memory system. These controls are intended only for nonindustrial appliances.

**RATINGS**

Appliance controls are rated maximum 16 A and are intended to be installed on a 20 A maximum branch circuit. The voltage is limited according to the end-product standard. They are not intended for controlling motor-operated appliances unless specifically identified for such use, e.g., appliance controls designated for control of electric fans. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual certifications.
PRODUCT MARKINGS
Controls typically have resistive or general use (power factor 0.75 – 0.80) loads. A controller may be specifically identified for other load types, e.g., “Suitable for ___ W lamp loads,” or “Suitable for ___ hp electric fans,” where the blank identifies the numerical value of the rating.

PRODUCT IDENTITY
The following product identity appears on the product:
Appliance Control
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
Devices intended to be part of a building control system are covered under Management Equipment, Energy (PAZX).
Devices that use light-sensitive and/or motion-sensitive (passive infrared) switches are covered under Switches, Photoelectric (WJCT).
Devices indented for industrial applications are covered under Power Circuit and Motor-mounted Apparatus (NMTR).
Devices such as thermostats are covered under Temperature-indicating and Regulating Equipment (XAPX).
Controlled receptacles with integral switching means is intended for energy management and building automation applications in accordance with Section 406.3(E) of ANSI/NFPA 70, “National Electrical Code,” are covered under Receptacles with Integral Switching Means (RTX).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 244A, “Solid-State Controls for Appliances,” or ANSI/UL 60730-1, “Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements,” together with one or more of the following Part 2 standards as indicated in the individual certifications:
UL 60730-2-6, “Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements”
UL 60730-2-27, “Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Timers and Time Switches”
ANSI/UL 60730-2-9, “Automatic Electrical Controls for Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls”
UL 60730-2-13A, “Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls”

Products not identified with a specific standard reference are investigated to UL 244A (3rd ed., issued April 30, 2003; last revised March 4, 2010). All other products are identified by the specific standard/edition/date in the individual certifications.
Controls for devices investigated to end-product standards, such as ANSI/UL 508, “Industrial Control Equipment,” are identified in the individual certifications.

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Appliance Control,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

APPLIANCE OUTLET CENTERS (AUJZ)
This category covers appliance outlet centers, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.
Materials, including the methods used for installation of electrical, mechanical, and plumbing equipment incorporated in these assemblies by their manufacturer have been investigated for installation requirements in accordance with ANSI/NFPA 70, “National Electrical Code,” NFPA’s National Fire Codes, and model building, plumbing and mechanical codes.

APPLIANCE OUTLET CENTERS (AVGQ)
This category covers appliance outlet centers intended for use in residential dwellings.

PRODUCT IDENTITY
The following product identity appears on the product:
Residential Appliance Outlet Center

COMMERCIAL APPLIANCE OUTLET CENTERS (AUJZ)

USE AND INSTALLATION
This category covers appliance outlet centers, which consist of a group of outlets with or without suitable branch circuit overcurrent protective devices, branch-circuit switching and/or timer provisions. This category also covers appliance outlet center enclosures intended for use with specific appliance outlet centers.

These products are not intended for use in residential dwellings.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Commercial Appliance Outlet Center
Commercial Appliance Outlet Center Enclosure

ADDITIONAL INFORMATION
For additional information, see Appliance Outlet Centers (AUJZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 891, “Dead-Front Switchboards.”

These products are additionally investigated using ANSI/NFPA 70, “National Electrical Code” (NEC), to ensure compliance with the installation and use provisions of the NEC.

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Commercial Appliance Outlet Center” or “Commercial Appliance Outlet Center Enclosure.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Residential Appliance Outlet Centers (AVGQ)—Continued

ADDITIONAL INFORMATION
For additional information, see Appliance Outlet Centers (AVJZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS
The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Residential Appliance Outlet Center.”

Arc-mitigation equipment does not ensure that the protected equipment will avoid damage to other equipment or to reduce the likelihood of personal injury as a result of internal arcing fault conditions has not been investigated.

Assemblies of switchgear rated over 1000 V ac, including those investigated as "arc resistant," are covered under Switches, Load Interrupter and Isolating, Over 1000 Volts (WIQG). Arcing-fault-quenching equipment that is not provided with an enclosure marked with the words "arc resistant" are covered under Arc-mitigation Equipment (AVWP).

Arc-fault interrupters intended for use in dwelling units are covered under: Arc-fault Circuit Interrupters, Branch/Feeder Type (AVZQ).
Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG).
Arc-fault Circuit Interrupters, Portable Type (AWDO).
Arc-fault Circuit Interrupters, Cord Type (AWAY).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic requirements used to investigate products in this category are contained in UL 2748, "Outline of Investigation for Arcing Fault Quenching Equipment."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

PRODUCT CATEGORIES BY CATEGORY CODE

ARC-FAULT CIRCUIT INTERRUPTERS

GENERAL
This category covers arc-fault circuit interrupters (AFCI) and system combination arc-fault circuit protection intended to mitigate the effects of arcing faults that may pose a risk of fire ignition under certain conditions if the arcing persists.

These devices have been investigated to determine their ability to recognize and react to arcing faults. They have also been investigated to determine resistance to unwanted tripping because of the presence of arcing that occurs in control and utilization equipment under normal operating conditions and to verify that operation is not unduly inhibited by the presence of loads and circuit characteristics that may mask or attenuate unwanted arcing.

AFCI Indicators — AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arcing fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: “CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, the operation of the AFCI should be rechecked using the test and reset buttons on the AFCI.” The test button on the AFCI will demonstrate proper operation of the AFCI.

For additional information regarding AFCI indicators, see Outlet Circuit Testers (QCYU).

PRODUCT MARKINGS
Arc-fault circuit interrupters and the individual devices of system combination arc-fault circuit protection are marked to identify the type of device to aid the user in determining the intended location in a circuit.

******************************************************************************
UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Arc-Fault Circuit Interrupters, Branch/Feeder Type (AVZQ)**

**USE**

This category covers arc-fault circuit interrupters intended to be installed at the origin of a branch circuit or feeder, such as at a panelboard, where they can function to de-energize the entire branch circuit when an arc fault is detected. These devices are intended to provide protection of the branch-circuit wiring, feeder wiring, or both, against the unwanted effects of arcing. These devices also provide protection to cord sets and power-supply cords connected to receptacles as shown below. These devices may be self-contained with an enclosure, separate devices intended to be mounted in an enclosure, or integrated as part of another device, such as a circuit breaker.

**PROTECTION PROVIDED**

The following branch-circuit diagram and arc-fault-protection table illustrate the protection provided by a branch/feeder AFCI under various arc-fault scenarios.

**Notes**

- Y – Arc-fault protection provided
- N – Arc-fault protection not provided
- (#) – Branch-circuit wiring systems without ground were permitted prior to the 1962 NEC
- Parallel arcing detection includes arcing line-to-line and line-to-ground

**RATINGS**

These devices are rated 15 or 20 A, 120 or 120/240 V.

**PRODUCT MARKINGS**

Branch/feeder AFCIs are marked “Branch/Feeder Arc-fault Circuit-Interrupter” (or “Branch/Feeder AFCI”) where visible with a dead-front or faceplate removed, while the device is installed. Combination-type AFCIs additionally covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) and not marked “Line” and “Load” are suitable for operation with a supply source connected to either side.

**PRODUCT IDENTIFY**

One of the following product identities appears on the product:

- Branch/Feeder AFCI
- Branch/Feeder Arc-fault Circuit Interrupter

**ADDITIONAL INFORMATION**

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).
**Arc-fault Circuit Interrupters, Combination Type (AWAH)—Continued**

- Combination AFCIs located at other than the origin of the branch circuit do not protect upstream branch-circuit wiring, cord sets or power-supply cords.

**RATINGS**

These devices are rated 15 or 20 A, 120 V or 120/240 V.

**PRODUCT MARKINGS**

Combination AFCIs are marked “Combination Arc-fault Circuit-Interrupter” (or “Combination AFCI”) where visible with a dead-front or faceplate removed, while the device is installed.

Combination-type AFCIs additionally covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) and not marked “Line” and “Load” are suitable for operation with a supply source connected to either side.

**PRODUCT IDENTITY**

**Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ)**

**USE AND INSTALLATION**

This category covers arc-fault circuit interrupters that have been investigated to provide protection of the downstream branch-circuit wiring, cord sets and power-supply cords against the unwanted effects of arcing. These devices also provide protection to upstream branch-circuit wiring as shown below.

These devices have feed-through connections.

These devices are intended to be installed as the first outlet in a branch circuit.

**PROTECTION PROVIDED**

The following branch-circuit diagram and arc-fault protection table illustrate the protection provided by an outlet branch-circuit AFCI under various arc-fault scenarios.

Arc-fault Circuit Interrupters, Outlet Branch Circuit Type
(AWVBZ)−

GENERAL

This category covers outlet branch circuit arc-fault circuit interrupters that have been investigated for use with specific molded-case circuit breakers to provide system combination arc-fault circuit protection intended for installation in dwelling units in accordance with ANSI/NFPA 70, “National Electrical Code.”

System combination arc-fault circuit protection is a system consisting of a certified outlet branch circuit arc-fault circuit interrupter installed at the first outlet of a branch circuit in combination with a specified certified molded-case circuit breaker installed as the branch-circuit overcurrent protective device.

With respect to system combination arc-fault circuit protection, the term molded-case circuit breaker includes a thermal magnetic circuit breaker, an electronic circuit breaker and a circuit breaker and ground-fault circuit interrupter.

System combination arc-fault protection may be provided as an outlet branch circuit arc-fault circuit interrupter provided with documentation that identifies the suitable molded-case circuit breakers that are included in the system combination or as a kit consisting of an outlet branch circuit arc-fault circuit interrupter and molded-case circuit breaker packaged together. In either case the information described under INSTALLATION INSTRUCTIONS below is provided with the outlet branch circuit arc-fault circuit interrupter.

The system combination has been investigated to provide protection of the branch-circuit wiring, cord sets, and power-supply cords against the unwanted effects of arcing.

- Parallel arcing detection includes arcing line-to-line and line-to-ground

RATINGS

System combination arc-fault circuit protection is rated 15 or 20 A, 120 V.

PRODUCT MARKINGS

If a system combination is provided as a kit consisting of an outlet branch circuit arc-fault circuit interrupter and molded-case circuit breaker packaged together, the following marking is provided on each device:

CAUTION — System Combination AFCI – For continued arc-fault protection, both the OBC AFCI receptacle and branch circuit breaker must be replaced together if it becomes necessary to replace either component.

If a system combination is provided as an outlet branch circuit arc-fault circuit interrupter provided with documentation that identifies the suitable molded-case circuit breakers that are included in the system combination, the above marking is provided on the outlet branch circuit arc-fault circuit interrupter. Additionally a label containing the above marking is provided for installation adjacent to or on the specified molded case circuit breaker installed in the panelboard.

INSTALLATION INSTRUCTIONS

The product information provided with the outlet branch circuit arc-fault circuit interrupter includes the manufacturer, complete type or catalog number, and rating of the specified molded-case circuit breaker(s). This information is included on the installation instructions packaged with the device, or on a separate information sheet packaged with the device and referenced by the instructions. This information may also appear on the smallest unit packaging of the device.

PRODUCT IDENTIFY

One of the following product identities appears on the product:

SC AFCI
System Combination
System Combination AFCI
System Combination Arc-fault Circuit Protection

RELATED PRODUCTS

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 1699C, “Outline of Investigation for System Combination Arc-Fault Circuit Protection.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH MOLDED-CASE CIRCUIT BREAKERS IDENTIFIED IN MANUFACTURER’S INSTRUCTIONS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Arc-fault Circuit Interrupters, Outlet Branch Circuit Type
(AWCC)

USE AND INSTALLATION
**ARC-FAULT CIRCUIT INTERRUPTERS (AVYI)**

This category covers arc-fault circuit interrupters intended to be installed at a branch-circuit outlet, such as an outlet box. These devices are intended to provide protection of cord sets and power-supply cords connected to it against the unwanted effects of arcing. These devices may provide feed-through protection of the cord sets and power-supply cords connected to downstream receptacles. These devices may or may not have feed-through connections. These devices may or may not have integral receptacles.

### RATINGS

These devices are rated 15 or 20 A, 120 V.

### PRODUCT IDENTITY

One of the following product identities appears on the product:
- Outlet Circuit AFCI
- Outlet Circuit Arc-fault Circuit Interrupter

### ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, “Arc-Fault Circuit-Interrupters.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Outlet Circuit Arc Fault Circuit Interrupter” (or “Outlet Circuit AFCI”).

**Alternate UL Mark**

**UL MARK**

In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**ARC-FAULT CIRCUIT INTERRUPTERS, PORTABLE TYPE (AWDO)**

This category covers arc-fault circuit interrupters intended to be connected to a receptacle outlet. They are provided with one or more outlets. These devices are intended to provide protection to connected cord sets and power-supply cords against the unwanted effects of arcing.

### RATINGS

These devices are rated 20 A maximum, 120 V.

### PRODUCT IDENTITY

One of the following product identities appears on the product:
- Portable AFCI
- Portable Arc-fault Circuit Interrupter

### ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, “Arc-Fault Circuit-Interrupters.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. ---

**ARMORED CABLE (AWEZ)**

This category covers armored cable in sizes 14–1 AWG copper and 12–1 AWG aluminum or copper-clad aluminum and rated 600 V or less. Aluminum-armored cable is suitable for use in alternating current circuits only. Armored cable is for use in accordance with Article 320 of ANSI/ NFPA 70, “National Electrical Code.”

### GENERAL

This category covers electrical equipment systems intended for installation in accordance with Article 680 (Part V) and Article 682 of ANSI/NFPA 70, “National Electrical Code.” Equipment may consist of pumps (including submersible pumps), lights, control panels, and timers. Equipment may also include wind sensors, light detectors, freeze-prevention equipment, and the like. These systems may be submersible or intended for remote installation. Systems suitable for outdoor use are so marked.

### USE AND INSTALLATION

Similar portable equipment is covered under Fountains, Small Decorative (IQRW). Control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WAWL).

### RELATED PRODUCTS

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

### ADDITIONAL INFORMATION

The basic standards used to investigate products in this category are ANSI/UL 778, “Motor-Operated Water Pumps,” UL 676, “Underwater Lighting Fixtures,” and UL 508A, “Industrial Control Panels.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**LOOK FOR THE UL MARK ON PRODUCT**
ARMORED CABLE CONNECTORS, TYPE AC (AWSX)

GENERAL

This category covers armored-cable connectors suitable for use with armored cable (Type AC). These connectors are intended for installation and use in accordance with the following information and the limitations specified in Armored Cable (AWEZ).

The individual certifications for each connector used with nonmetallic-sheathed cable may have details about the size and number of the nonmetallic-sheathed cable that will secure the connectors.

ARMORED CABLE (AWEZ)

Armored cable complies with the Flame and Limited Smoke Test requirements specified in UL 1685, “Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables” and may be marked with the suffix “LS” and/or “For Use in Cable Trays.”

Cable with aluminum armor is identified with the words “ALUMINUM ARMOR” on a marker tape and tag on coils.

Cable with compact-stranded copper conductors is identified with the designation “AL (CU-CLAD)” or “Cu-Clad Al.” on a tag, on the carton or reel. Cable with aluminum conductors is identified with the designation “AL” on a tag, on the carton or reel.

In addition, cable with compact-stranded copper conductors is identified with the designation “Compact Copper” or “CMPC” on the following conductor size and the words “Terminate with connectors identified for use with compact-stranded copper conductors” on a tag, on the carton or reel.

PRODUCT IDENTIFIER

One of the following product identities appears on the product:

- Armored Aluminum Cable (for armored cable that has aluminum armor)
- Armored Aluminum Cable (for armored cable that contains aluminum conductors)
- Armored Cable (for armored cable that contains copper or copper-clad aluminum conductors)

RELATED PRODUCTS

For fittings suitable as a grounding means, see Armored Cable Connectors (AWSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 4, “Armored Cable.”

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and the product name “Armored Cable.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS (AXGV)

GENERAL

This category covers the following types of products:

- Adapter — A device that adapts one blade or slot configuration to another (including a grounding adapter for a nongrounding receptacle), adapts a receptacle to a lampholder, or adapts a lampholder to a receptacle (also known as a separable attachment plug). (See EMDV for similar products.)
- Appliance Coupler — A single-outlet female contact device to be wired on flexible cord as part of a detachable power-supply cord to be connected to a male inlet of an appliance.
- Appliance or Flattiron Plug — An appliance coupler type of device having a slot configuration specified for use with heating or cooking appliances.
- Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.
- Cord Connector — A female contact device to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to an equipment inlet.
- Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.
- Nonseparable Attachment Plug — An adapter having a male screw shell and a pair of wire leads to be connected to utilization equipment.
- Separable Attachment Plug — An adapter having a male screw shell and a cord configuration outlet.
- Shore Power Inlet — A male inlet intended to provide power-supply connection to boats moored to a dock. Shore power inlets are also covered under Shore Power Inlets, Marine (UXBR).
ATTACHMENT PLUGS (AXGV)

Table Tap — A cord connector having more than one outlet and intended to rest on a horizontal surface while in use.

This category does not cover devices to be molded on flexible cord or wire and unassembled devices to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and they are judged as part of a complete assembly.

Ratings

These devices are rated 600 V or less, ac or dc, and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Outlet devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Outlet devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, i.e., a 120/208 V, 3-phase, device is tested on a circuit involving 120 V to ground.

Terminals

The terminations of devices intended to be wired to flexible cord are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, “National Electrical Code” (NEC). The ampacity of flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). The conductors are sized as specified on the product or in the manufacturer’s instructions provided with the device. The terminations are based on the use of 60°C flexible cord or cable.

The terminations of devices intended to be wired onto branch-circuit conductors are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.15(B)(16) of the NEC.

Grounding

Devices having a terminal identified by a green-colored finish, the words “green” or “ground,” the letters “G” or “GR,” or the grounding symbol grounding types. The blade, pin or contact number connected to this terminal is for equipment grounding only.

Enclosures

In general, devices having integral enclosures or installed as intended have been investigated for use indoors, in dry locations. All such Listed products provide a degree of protection against ordinary corrosion, accidental contact with live parts, and a limited amount of falling dirt. Some devices have been investigated for use in other operating environments when unmated and when mated with other devices in the same manufacturer’s line of products. They are marked with one of the type designations 2 through 6, 12 and 13 indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). All outdoor types provide a degree of protection against rain, snow, and sleet. Outdoor types are also suitable for use indoors if they meet the environmental conditions present. A device that complies with the requirements for more than one type of enclosure may be marked with multiple designations. Complete use and mating information is provided in the installation instructions provided with each device.

RELATED PRODUCTS

This category does not cover pin-and-sleeve-type devices; refer to Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors (QLGD).

* * * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, FUSELESS (AXUT)

GENERAL

This category covers adapters, appliance couplers, appliance and flatiron plugs, attachment plugs, cord connectors, male inlets (equipment inlet, motor-attachment plugs), nonseparable attachment plugs, separable attachment plugs, shore-power inlets and table taps. These devices do not incorporate switches or overcurrent protection.

Devices for Use in Hospitals — Attachment plugs and cord connectors certified for hospital use in other than hazardous (classified) locations in accordance with Article 517 of ANSI/NFPA 70, “National Electrical Code,” are identified by (1) the marking “Hospital Only” (used to identify a specific grounding locking configuration rated 20 A, 125 V, used for the connection of mobile x-ray and similar equipment), or (2) the marking “Hospital Grade,” and a green dot on the device. Male inlets may be identified only by the marking “Hospital Only.” The identification is visible after installation on the flexible cord or, in the case of the male inlets, on the utilization equipment.

Federal Specification — Some certified attachment plugs, cord connectors and male inlets in this category have been investigated to Federal Specification W-C-596, “General Specification for Electrical Power Connectors.”

Terminals — Terminals of appliance couplers, appliance and flatiron plugs, attachment plugs, cord connectors and table taps are intended for use with stranded copper conductors of the type used in flexible cord. Terminals of male inlets (motor attachment plugs) and shore-power inlets of the wire-binding screw, setscrew, or screw-actuated back-wire clamping types are suitable for use with both solid and stranded wire.

Horsepower Ratings — In addition to ampere and voltage ratings, standard ac horsepower ratings corresponding to the amp and voltage ratings assigned to specific attachment plugs not incorporating overcurrent protection or a switch are given in the table below. For a Design E motor rated more than 2 horsepower, it is necessary to use an attachment plug having a horsepower rating not less than 1.4 times the standard ac horsepower rating. The NEMA configuration designation is included for reference. Devices other than attachment plugs, and attachment plugs of configurations other than those indicated in the table, have horsepower ratings only if such ratings are marked on the device.

L-L: Motor connected line-to-line
L-N: Motor connected line-to-neutral
# Also suitable for 208 V motor applications at the indicated horsepower rating

For three-phase devices, the horsepower ratings indicated are for three-phase motor loads.

PRODUCT IDENTIFY

One of the following product identities appears on the product:
- Fuseless Attachment Plug
- Plug

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Attachment Plugs (AXGV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, “Attachment Plugs and Receptacles.”

Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the product, or the UL symbol stamped or molded into the product and the Certification Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

In lieu of the UL symbol stamped or molded into the product, “UNDERWRITERS LABORATORIES INC. LISTED” (or “UND. LAB. INC. LIST.”) may be stamped or molded into the product. When marked as such, the Certification Mark will appear on the smallest unit packaging.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for the product includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Switch.”

In lieu of the UL symbol stamped or molded into the product, “UNDERWRITERS LABORATORIES INC. LISTED” (or “UND. LAB. INC. LIST.”) may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damage, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS WITH OVERLOAD PROTECTION (AYVZ)

USE

This category covers attachment plugs, separable and nonseparable attachment plugs, cord connectors, and male inlets designed to accommodate standard fuses, or provided with circuit breakers or equivalent overcurrent protection.

PRODUCT IDENTIFY

One of the following product identities appears on the product:
- Attachment Plug
- Attachment Plug with Overload Protection
- Cord Connector

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Attachment Plugs (AXGV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, “Attachment Plugs and Receptacles.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Attachment Plug with Overload Protection.”
This category covers power-operated audio and radio equipment and accessories rated 300 V or less and designed to meet the use requirements of commercial enterprises or establishments, churches, schools, theaters, factories and similar locations, and connected to supply circuits in accordance with ANSI/NFPA 70, "National Electrical Code.

Commercial audio and radio equipment includes amplifiers, preamplifier mixers, signal processors, etc. for general use; public address and centralized sound systems; tape decks and tape storage systems; special effects units and integral amplifier/speakers, etc. that are intended for use by professional and semi-professional musicians.

This category also covers accessories for use with commercial audio and radio equipment such as audio modulated lights, audio level indicators, etc.

Products of the above types may also be covered under Audio/Video Apparatus (AZSQ). This category does not cover dictating or transcribing machines for office use.

This category does not cover musical instruments and accessories other than those noted above; see Musical Instruments (PWHZ).

Speakers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

Products intended to form part of any fire-resistant barrier assembly can be found in the Fire Resistance Directory.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the Certification Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the Certification Mark, the tag is not required.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

Commercial Audio Equipment
Commercial Audio Product
Commercial Audio System
Commercial Radio
Commercial Sound Equipment

Other product identities may be used as shown in the individual certifications, prefixed by the word "Commercial.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 813, "Commercial Audio Equipment.

In addition, ANSI/UL 2045, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces," is used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic certified equipment specified in the markings or instructions.

**REBUILT PRODUCTS**

This category also covers audio and video apparatus that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt audio and video apparatus is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt audio and video apparatus is subject to the same requirements as new audio and video apparatus.

**SPECIAL CONSIDERATIONS**

Unless specified in the individual certifications, the efficacy, including reliability, interoperability and functionality of this equipment, has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- **Audio Equipment**
- **Audio Product**
- **Audio System**
- **Audio/Video Apparatus**
- **AV Product**
- **AV Apparatus**
- **AV Power Supply**
- **Commercial Audio Equipment**
- **Commercial Audio Product**
- **Commercial Audio System**
- **Musical Instrument**
- **Radio Receiver**
- **Television Equipment**
- **Television Receiver**
- **TV Equip**
- **TV Equipment**
- **Video Equipment**
- **Video Product**
- **Video System**

Other product identities may be used as shown in the individual certifications, or combinations of the product identities where required. The product identity for field-installed accessories includes the word “Accessory.” For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**RELATED PRODUCTS**

Television and video equipment intended for use in health care facilities is investigated to UL 6500, “Audio/Video and Musical Instrument Apparatus for Household, Commercial and Similar General Use,” or ANSI/UL 6065, “Audio, Video and Similar Electronic Apparatus – Safety Requirements,” and is covered under Television/Video Equipment for Use in Health Care Facilities (KFCV). Musical instruments and their accessories are investigated to UL 6500 or ANSI/UL 60065 and are covered under Musical Instruments (PWHZ).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 6500, “Audio/Video and Musical Instrument Apparatus for Household, Commercial and Similar General Use,” or ANSI/UL 6065, “Audio, Video and Similar Electronic Apparatus – Safety Requirements.” Products investigated for use in air-handling spaces are marked “Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22, (C) of the National Electrical Code,” or “Suitable for Use in Air-Handling Spaces.” These products have been additionally investigated to UL 2043, “Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.” Products that bear the marking are suitable for installation in accordance with ANSI/NTA 70, “National Electrical Code,” ANSI/NFPA 90A, “Installation of Air-Conditioning and Ventilating Systems,” the “International Mechanical Code,” and the “Uniform Mechanical Code.”

Carts and similar apparatus intended to provide a surface for the support or attachment of audio or video equipment also includes applicable requirements in ANSI/UL 1678, “Household, Commercial, and Institutional-Use Carts, Stands and Entertainment Centers for Use with Audio and/or Video Equipment,” or ANSI/UL 1667, “Tall Institutional Carts for Audio, Video, and Television-Type Equipment.”

Apparatus incorporating induction-power-transfer technology associated with low-energy products have additionally been investigated to ANSI/UL 2738, “Induction Power Transmitters and Receivers for Use with Low Energy Products.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

---

**AUDIO AND VIDEO EQUIPMENT**

This category covers:

1. **Audio products and accessories** intended for household use and involved with the reproduction or processing of audio signals such as audio components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Mark, the tag is not required.

2. **Video products** intended for household or commercial use that receive signals from a CATV/MATV cable system, from a video-recorded medium, or from image producing units. Examples of such products are video tape recorders, video-recording, -processing, -recording, -reproducing, and -amplification products, antenna amplifiers, antenna positioning equipment, cable television (CATV) converters, microwave or satellite receivers, television tuners, television cameras, television receivers and monitors, and similar products. These products have not been evaluated for security surveillance protection; see “Related Equipment” below.

3. **Auxiliary products and accessories** intended for use with audio or video products wherein the auxiliary and accessory products are separate and do not perform the desired function, but are used in addition to or as a supplement to products according to items (1) and (2). Examples of such products are character generators, digital processors, editing controllers, video switches and encoders, CRT degaussers, video tape rewinders, head demagnetizers, tape erasers, separately enclosed nonpowered loudspeakers, and similar products.

4. **Portable audio or video products** of the types described in items (1)-(3) intended for use with a vehicular, marine, or any other battery circuit as the power supply means.

5. **Carts and stands** and similar structures marked for use with specific audio or video products.

Products of the above types may also be covered under Audio/Video Apparatus (AZSQ).

**REBUILT PRODUCTS**

This category also covers audio and video equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt audio and video equipment is rebuilt to the extent necessary by disassembly and reassembly using
new or reconditioned parts. Rebuilt audio and video equipment is subject to the same requirements as new audio and video equipment.

Rebuilt products of the types noted under EQUIPMENT TYPES above may also be covered under Audio/Video Apparatus (AZSQ).

PRODUCT IDENTITY
One of the following product identities appears on the product:

Audio Equipment
Audio Product
Audio System
AV Apparatus
AV Product
Radio Receiver
Television Equipment
Television Receiver
Video Equipment
Video Product
Video System

Other product identities may be used as shown in the individual classifications, or combinations of the product identities where required.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED EQUIPMENT
Commercial audio products are covered under Commercial Audio and Video Equipment, Systems and Accessories (AZJX) or Commercial Phonographs, Tape Playing and Recording Appliances and Accessories (AZQW).

Household, commercial, and professional use carts, stands, shelves and similar structures not identified for use with specific audio or video products are covered under Carts and Stands for Household, Commercial and Professional Use (CZU).

Carts and similar structures, not identified for use with specific audio or video products, having a top load surface that is more than 1 meter (39.37 in.) above the floor, and that are intended for use in schools, institutions, hospitals or like locations where children are likely to move them or may be asked to move them are covered under Carts, Tall Institutional (CZW).

Video products intended for entertainment purposes in unclassified locations of health care facilities are covered under Television/Video Equipment for Use in Health Care Facilities (KFCV).

Professional audio and video equipment is covered under Video and Audio Equipment, Professional (ZCB).

Battery chargers and power supplies, portable or for permanent installation and not packaged with or specifically referenced in literature packaged with an audio or video product, are covered under the respective categories.

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 1492, "Audio-Video Products and Accessories."

Carts and similar structures having a top load surface that is more than 1 meter (39.37 in.) above the floor, and that are intended for use in schools, institutions, hospitals or like locations where children may move them, also comply with the applicable requirements of ANSI/UL 1667, "Tall Institutional Carts for Audio-, Video-, and Television-Type Equipment."

Circuits in audio and video products intended to connect directly to a telecommunication network also comply with the applicable requirements of ANSI/UL 1459, "Telephone Equipment."

Audio or video products intended for use by children also comply with the applicable requirements in ANSI/UL 696, "Electric Toys."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Audio Equipment," "Audio Product," "Audio System," "Radio Receiver," "Television Equipment," "Television Receiver," "Video Equipment," "Video Product," "Video System," "AV Product," "AV Apparatus," or other appropriate product name as shown in the individual Listings, or combinations of the preceding identities where required.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO AND VIDEO EQUIPMENT CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (AZVG)

USE AND INSTALLATION
This category covers retrofit devices or kits consisting of parts and/or subassemblies intended for field installation by qualified service personnel in UL-certified commercial audio and video equipment that involves modifying, revising, or replacing the circuitry internal to the certified equipment. These products have been investigated to determine that, when installed in accordance with the manufacturer’s installation instructions, they do not adversely affect the operation of the specified equipment.

The retrofit kits are limited in the amount of field revision that will be performed to no more than 50% revision to or replacement of the certified product circuitry. The parts that form the enclosure of the certified product may be modified in the field to fulfill the installation of the kit, but not replaced. Installation instructions are provided with each kit and include information identifying the specific equipment into which the kit may be installed. The instructions include a statement indicating that, upon completion of the retrofit, a 1000 V AC or DC Dielectric Strength test is to be performed between specified points.

RELATED EQUIPMENT
See Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate the retrofit kits in this category and their combination with the specified end-use product is UL 1492, "Audio-Video Products and Accessories," or UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark appears on the largest part of the kit assembly that can be readily assembled by an installer on site. Each major part of the kit is identified by appropriate marking.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:

RETRIEFT KIT FOR INSTALLATION IN SPECIFIED [identification of equipment]
IDENTIFIED IN THE MANUFACTURER’S INSTALLATION INSTRUCTIONS
Alternate UL Mark
The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETRIEFT KIT FOR INSTALLATION IN SPECIFIED [identification of equipment]
IDENTIFIED IN THE MANUFACTURER’S INSTALLATION INSTRUCTIONS
Control No.

The Classification Mark appears on the largest part of the kit assembly that can be readily assembled by an installer on site. Each major part of the kit is identified by appropriate marking.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
AUTOMOTIVE LIFT AND SUSPENSION EQUIPMENT (BAAC)

This category covers devices intended for applications where vehicle servicing and/or repair operations are performed. The devices may be used with a variety of vehicular equipment to provide lifting, support or suspension capabilities and may be portable or permanently installed.

Some of the devices incorporate parts which may produce arcs or sparks and, therefore, when located in garages, should be used within enclosures provided for the purpose, or should be located 18 in. or more above the floor in accordance with ANSI/NFPA 70, “National Electrical Code,” and Chapter 6 of ANSI/NFPA 30A, “Code for Motor Fuel Dispensing Facilities and Repair Garages.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMOTIVE LIFTS (BACL)

USE AND INSTALLATION

This category covers devices intended to lift and support wheeled vehicles. The lifts may be electrically, pneumatically or otherwise mechanically powered and consist of a hydraulic, pneumatic or mechanical type of lift system. This category covers electrical systems rated 600 V or less.

These products are intended to be used mainly in commercial garages and in gasoline dispensing and service stations. Unless specifically marked for hazardous (classified) locations use, products are intended for use in an area that is considered unclassified (ordinary) based on the classification in ANSI/NFPA 70, “National Electrical Code” (NEC). These products are intended to be installed in accordance with the instructions provided with the product and with the provisions in the NEC.

Some electrical equipment covered under this category incorporates components that tend to produce arcs or sparks and, therefore, when installed in commercial garages or gasoline dispensing and service stations, should be in areas or enclosures suitable for the purpose in accordance with the NEC. Equipment incorporating arcing or sparking parts located above 18 in. from floor level (i.e., in an area considered unclassified by the NEC) are provided with instructions that the equipment is not to be installed in a recessed floor area. Equipment incorporating arcing or sparking parts located below 18 in. from floor level are marked for use in a Class 1, Division 2 location, or the equipment should be located where there is mechanical ventilation providing a minimum of four air changes per hour in accordance with Section 511.3 of the NEC. In addition, consideration should be given to the surrounding area classification in accordance with the NEC. The installation instructions for equipment specify the necessary ventilation requirements, and the suitability of ventilation should be determined at the installation site.

PRODUCT IDENTITY

The following product identity appears on the product:

Automotive Lift

RELATED PRODUCTS

Portable automotive lift devices (PALD) are not covered under this category. These products include hand jacks, engine stands, screw jacks, bumper jacks, wheel ramps, shop cranes, auxiliary stands, or vehicle support stands, which are covered under the ASME PALD series of standards.

ADDITIONAL INFORMATION

For additional information, see Automotive Lift and Suspension Equipment (BAAC) and Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automotive Lift.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BANK EQUIPMENT (BALT)

GENERAL

This category covers bank equipment, including currency dispensers, depositories, motor-operated vault doors, remote tellers’ systems, tellers’ fixtures and similar devices. They have been investigated for conformity to the installation and use provisions of ANSI/NFPA 70, “National Electrical Code.” These products have been certified as to electrical fire, shock and casualty hazards only.

FACTORS NOT INVESTIGATED

The burglary and theft protection features of this equipment have not been investigated. Vault doors have not been investigated for the protection of openings in walls against fire or for the protection of records stored in the vault.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU). Currency-handling equipment not for exclusive use in banks may be covered under Information Technology Equipment (NWQ). The performance and functional characteristics of this equipment have not been investigated.

Electrically operated control mechanisms that receive coins, currency, credit cards, or tokens to select prices, accumulate credits, store coins or currency, give change, or initiate a vend cycle for an appliance, or combinations of these functions, are covered under Coin and Currency Changers and Actuators (DUUC).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, “Information Technology Equipment – Safety – Part 1: General Requirements.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL FIRE, SHOCK AND CASUALTY HAZARDS ONLY

Alternate UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

BANK EQUIPMENT

AS TO ELECTRICAL FIRE, SHOCK, AND CASUALTY HAZARDS ONLY

Control No.

LUBRICANT-DISPENSING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (BAYZ)

GENERAL

This category covers equipment intended for dispensing lubricants, such as lubricating oils and greases. The lubricants intended to be dispensed by this equipment involve flash points greater than 200°F.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Lubricant Dispenser for Use in Hazardous Locations

Lubricant-dispensing Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

LOOK FOR THE UL MARK ON PRODUCT
### Batteries for Use in Electric Vehicles (BBFX)

#### General

This category covers batteries intended for various stationary applications, such as energy storage for wind turbines, and photovoltaic and uninterrupted power supply applications.

This category also covers electric energy storage systems (ESS) for use in light electric rail (LER) applications and stationary rail applications, such as rail substations. These systems are intended for installation within the rail car or within a sheltered stationary location, such as a rail substation. These systems may utilize regenerative braking from the trains as a source of energy for recharging and are intended for direct connection to the rail power lines. These devices are intended for balancing leads during peak hours, serving as an energy storage device during regenerative breaking of the trains, and as a source of emergency power to move trains to the nearest station during power outages.

Various battery chemistries are included, such as lead acid, lithium-ion, nickel-metal hydride, nickel cadmium, sodium-metal chloride, and flowing electrolyte batteries. Systems composed of electrochemical capacitors or battery and electrochemical capacitor hybrid systems are also included. They are intended for use in accordance with ANSI/NFPA 70, “National Electrical Code.” These systems have been investigated for potential electric shock, fire and explosion hazard.

#### Product Identity

One of the following product identities appears on the product:
- Electrochemical LER-application Capacitor
- Electrochemical Stationary-application Capacitor
- Lead-acid LER-application Battery
- Lead-acid Stationary-application Battery
- Lithium-ion LER-application Battery
- Lithium-ion Stationary-application Battery
- Nickel-metal Hydride LER-application Battery
- Nickel-metal Hydride Stationary-application Battery
- Sodium Nickel Chloride LER-application Battery
- Sodium Nickel Chloride Stationary-application Battery
- Sodium Sulfur LER-application Battery
- Sodium Sulfur Stationary-application Battery
- Vanadium Redox LER-application Flow Battery
- Vanadium Redox Stationary-application Flow Battery
- Zinc Bromine LER-application Flow Battery
- Zinc Bromine Stationary-application Flow Battery

#### Additional Information

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

#### Requirements

The basic standard used to investigate products in this category is ANSI/UL 2580, “Batteries for Use in Electric Vehicles.”

### Batteries for Use in Light Electric Rail and Stationary Applications (BBFX)

#### General

This category covers batteries for use in light electric rail (LER) applications and stationary rail applications, such as rail substations. These systems are intended for installation within the rail car or within a sheltered stationary location, such as a rail substation. These systems may utilize regenerative braking from the trains as a source of energy for recharging and are intended for direct connection to the rail power lines. These devices are intended for balancing leads during peak hours, serving as an energy storage device during regenerative breaking of the trains, and as a source of emergency power to move trains to the nearest station during power outages.

Various battery chemistries are included, such as lead acid, lithium-ion, nickel-metal hydride, nickel cadmium, sodium-metal chloride, and flowing electrolyte batteries. Systems composed of electrochemical capacitors or battery and electrochemical capacitor hybrid systems are also included. They are intended for use in accordance with ANSI/NFPA 70, “National Electrical Code.” These systems have been investigated for potential electric shock, fire and explosion hazard.

#### Product Identity

One of the following product identities appears on the product:
- Electrochemical LER-application Capacitor
- Electrochemical Stationary-application Capacitor
- Lead-acid LER-application Battery
- Lead-acid Stationary-application Battery
- Lithium-ion LER-application Battery
- Lithium-ion Stationary-application Battery
- Nickel-metal Hydride LER-application Battery
- Nickel-metal Hydride Stationary-application Battery
- Sodium Nickel Chloride LER-application Battery
- Sodium Nickel Chloride Stationary-application Battery
- Sodium Sulfur LER-application Battery
- Sodium Sulfur Stationary-application Battery
- Vanadium Redox LER-application Flow Battery
- Vanadium Redox Stationary-application Flow Battery
- Zinc Bromine LER-application Flow Battery
- Zinc Bromine Stationary-application Flow Battery

#### Additional Information

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

#### Requirements

The basic standard used to investigate products in this category is ANSI/UL 2580, “Batteries for Use in Light Electric Rail (LER) Applications and Stationary Applications.”

### UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Lithium-ion * Battery,” “Nickel-metal Hydride * Battery,” “Lead-acid * Battery,” “Sodium Nickel Chloride * Battery” or “Electrochemical Capacitor.”

* EV, HEV or PHEV  

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Lithium-ion Battery,” “Nickel-metal Hydride Battery,” “Nickel Cadmium Battery,” “Sodium Nickel Chloride Battery,” “Sodium Sulfur Battery,” “Zinc Bromine Flow Battery,” “Vanadium Redox Flow Battery,” “Lead-acid Battery,” or “Electrochemical Capacitor.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY CHARGERS FOR ENGINE-DRIVEN EMERGENCY AND STANDBY POWER SYSTEM GENERATORS (BBHH)

GENERAL

This category covers battery chargers for automatically controlling and maintaining the charge on batteries used to start internal-combustion engines driving emergency and standby power system generators. The equipment consists of rectifying stacks, transformers, controlling relays, switches and meters.

PRODUCT IDENTITY

The following product identity appears on the product:

Battery Charger for Use with Emergency Generators

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1236, “Battery Chargers for Charging Engine-Starter Batteries,” and the applicable requirements of ANSI/NFPA 110, “Emergency and Standby Power Systems.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY-POWERED PORTABLE LAND MOBILE RADIO EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (BBRX)

GENERAL

This category covers battery-powered, portable, two-way land mobile radio (LMR) equipment regulated by either the U.S. Federal Communications Commission for nonfederal government users, or the U.S. National Telecommunications and Information Administration for federal government users, and intended for use in areas designated as Class I, Class II or Class III hazardous (classified) locations in accordance with ANSI/NFPA 70, “National Electrical Code.” Examples of such LMR equipment include radios and pagers.

Instructions included with the equipment indicate use in land mobile radio applications, together with any other applications if applicable. An example of such would be reference in the instructions to 47CFR90, “Private Land Mobile Radio Services.”

REBUILT PRODUCTS

This category also covers LMR equipment and its accessories that are rebuilt by the original manufacturer or the original manufacturer’s authorized manufacturer covered under this category. Rebuilt LMR equipment and its accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt LMR equipment and its accessories are subject to the same requirements as new LMR equipment and its accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Land Mobile Radio Equipment for Use in Hazardous Locations
- Land Mobile Radio for Use in Hazardous Locations

The words “Land Mobile Radio” may be abbreviated “LMR.”

The word “Equipment” may be abbreviated “Eq.”

The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Refurbished,” “Repaired” or “Reconditioned” precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AIIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 908, “Industrial Control Equipment.” The basic hazardous (classified) locations standard used to investigate products in this category is TIA-495-A, “Requirements for Battery-Powered, Portable Land Mobile Radio Applications in Class I, II, and III, Division 1, Hazardous (Classified) Locations,” or ANSI/ISA-12.12.01, “Non-incendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Land Mobile Radio Equipment for Use in Hazardous Locations” or “Land Mobile Radio for Use in Hazardous Locations.” The words “Land Mobile Radio” may be abbreviated “LMR,” the word “Equipment” may be abbreviated “Eq.,” and the words “Hazardous Locations” may be abbreviated “Haz. Loc.”

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Refurbished,” “Repaired” or “Reconditioned” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOAT CABLE (BDFX)

GENERAL

This category covers boat cable, which consists of a single insulated conductor without a jacket or two or more insulated conductors with or without an overall nonmetallic jacket, and which is suitable for use in marine pleasure crafts. Boat cable is rated 600 V or less, 20°C to 60°C (122°F) or 75°C (167°F) wet, 60 to 200°C dry locations and, for cable so marked, 60°C (140°F) and lower temperatures where exposed to oil. The cable employs stranded copper conductors in a size range of 18 to 4/0 AWG inclusive for multiple-conductors, 16 to 4/0 AWG inclusive for single conductors.

Ampacities shall be in accordance with United States Coast Guard Regulations Title 33, Chapter I Parts 183.430 and 183.435 of the CFR.
BOILERS, ELECTRIC (BDJS)

PRODUCT IDENTITY

The following product identity appears on the product:

Boiler

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1426, "Electrical Cables for Boats."

Cable rated 600 V is investigated to UL 1426. Cable rated 50 V is investigated to SAE J1127, J1128, or J378b.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Boat Cable."

* * * * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOAT CABLE (BDFX)

GENERAL

This category covers electrically heated steam and hot water boilers that are within the scope of ASME Boiler and Pressure Vessel Codes, Volume I (Power Boilers) and Volume IV (Heating Boilers). This category may also include water heaters if, based on water temperature, input rating, or water tank capacity, they fall under the scope of the above ASME codes.

The pressure vessels of these appliances are constructed and stamped in accordance with the applicable section of the ASME Boiler and Pressure Vessel Code. The boilers are equipped with necessary temperature- or pressure-regulating and limit controls and with the appropriate ASME-rated pressure relief devices, and are marked with the appropriate ASME symbol.

INSTALLATION

Each boiler is provided with a marking that indicates the floor material (combustible or noncombustible) on which the boiler may be mounted and the necessary clearances from all other surfaces of the boiler to combustible materials.

The minimum acceptable clearances in inches between the boiler surfaces and adjacent combustible surfaces, the type of flooring required for mounting the boiler and the proper installation in an alcove or closet are indicated on the published printed cards by appropriate symbols and dimensions. The clearances so designated are the minimum required to avoid overheating; additional clearances may be required for accessibility. Each clearance requirement is indicated on the published printed cards by appropriate symbols and dimensions.

A boiler installation is indicated as follows:

BOXES, ENCLOSURES, HANDBOLES AND VAULTS, UNDERGROUND, UTILITY SPECIFICATION (BGHL)

GENERAL

This category covers boxes, enclosures, handholes, vaults, and the associated covers for underground utility company installations and similar uses. These products are intended for installation as specified by the Authority Having Jurisdiction, and provide a level of protection with respect to unintentional mechanical loading only. These products have also been investigated for chemical resistance, sunlight exposure, water absorption and flammability. They have not been investigated for protection of any installed electrical equipment against any of these environmental conditions.

The Vertical Design Load of the system (box, enclosure, handhole or vault in combination with a cover) is equal to the lowest Vertical Design Load of either component. The Lateral Design Load is equal to that of the box, enclosure, handhole or vault.

PRODUCT MARKINGS

Boxes, enclosures, handholes and vaults are marked with a Vertical Design Load and a Lateral Design Load. Covers for use with these boxes, enclosures, handholes and vaults are marked with a Vertical Design Load only. Boxes, enclosures, handholes and vaults are marked to identify the covers with which they may be used. Covers are also marked to identify the boxes, enclosures, handholes and/or vaults for which they are suitable. Design Load markings may be in the form of a Tier rating as shown below:
**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Cover for Underground Box
- Cover for Underground Enclosure
- Cover for Underground Handhole
- Cover for Underground Vault
- Underground Box
- Underground Enclosure
- Underground Handhole
- Underground Vault

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is Society of Cable Telecommunications Engineers Standard ANSI/SCTE 77, "Specification for Underground Enclosure Integrity."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

- ANSI/SCTE 77-[issue date]
- Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words "LISTED," a control number, and one of the following product names:

- "Underground Box"
- "Underground Enclosure"
- "Underground Handhole"
- "Underground Vault"

Other product identities may be used as shown in the individual certifications.

**ELECTRICAL EQUIPMENT**

Some boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the boxes.

**GROUNDING PROVISIONS**

Metal boxes are intended to receive one of the equipment grounding conductors specified in Section 250.118 of the NEC and are provided with either a factory-supplied equipment grounding conductor terminal or instructions to obtain equipment grounding conductor terminal kits available from the manufacturer, or are marked to indicate the boxes are intended to be grounded by metal raceways or metallic cable sheaths.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- &P Junction and Pull Box
- Junction Box
- Pull Box

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Boxes intended to accommodate metering transformers are covered under Metering Transformer Cabinets (PITX). Boxes intended for electric meter sockets are covered under Meter Sockets (PYZ).

Boxes provided with a door are covered under Cabinets and Cutout Boxes (CYIV). Enclosures investigated for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," are covered under Degrees of Protection by Enclosures Classified in Accordance with IEC Publications (EOEP). Enclosures intended for use with industrial control panels are covered under Industrial Control Panels (NITW). Boxes having a volume of 100 cu in. or less are covered under Metallic Outlet Boxes (QCIT) or Nonmetallic Outlet Boxes (QCMZ). Boxes intended for use with swimming pool luminaires are covered under Swimming Pool Junction Boxes (WCEZ). Boxes intended for use aboard marine vessels are covered under Boxes, Junction and Pull, Marine (QCUP).

Boxes for use in hazardous (classified) locations are covered under Boxes, Junction and Pull for Use in Zone Classified Hazardous Locations (BGYM).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ANSI/UL 50, "Enclosures for Electrical Equipment, Non-Environmental Considerations," and ANSI/UL 50E, "Enclosures for Electrical Equipment, Environmental Considerations."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark on the product or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names:

- Cover for Underground Box
- Cover for Underground Enclosure
- Cover for Underground Handhole
- Cover for Underground Vault
- Underground Box
- Underground Enclosure
- Underground Handhole
- Underground Vault

Other product identities may be used as shown in the individual certifications.

**GROUNDING PROVISIONS**

Metal boxes are intended to receive one of the equipment grounding conductors specified in Section 250.118 of the NEC and are provided with either a factory-supplied equipment grounding conductor terminal or instructions to obtain equipment grounding conductor terminal kits available from the manufacturer, or are marked to indicate the boxes are intended to be grounded by metal raceways or metallic cable sheaths.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- &P Junction and Pull Box
- Junction Box
- Pull Box

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Boxes intended to accommodate metering transformers are covered under Metering Transformer Cabinets (PITX). Boxes intended for electric meter sockets are covered under Meter Sockets (PYZ).

Boxes provided with a door are covered under Cabinets and Cutout Boxes (CYIV). Enclosures investigated for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," are covered under Degrees of Protection by Enclosures Classified in Accordance with IEC Publications (EOEP). the following product names: “Junction and Pull Box,” “Junction Box,” “Pull Box,” “J&P,” or other appropriate product name as shown in the individual Listings.

******

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET AND JUNCTION BOXES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (BGYM)

USE AND INSTALLATION

This category covers outlet, conduit, junction, and pull boxes, including intrinsically safe constructions, that may consist of equipment or components including terminals, terminal strips, terminal blocks, jumpers, busbars, and conduit fittings.

These boxes are for use with threaded rigid conduit or steel intermediate metal conduit wire raceways, or other approved wiring methods for hazardous (classified) locations in accordance with ANSI/NFPA 70, “National Electrical Code.” They may provide for sealing for conductors, but conductors are not intended to be sealed in conduit boxes. The boxes are marked or provided with instructions to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked “rain tight” have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water. Boxes identified with an enclosure type designation are intended for use as indicated in Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the type. The trade sizes of the openings either on the box, as part of the instructions, or on the packaging carton.

Cast-aluminum boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt-base paint or the equivalent, along with indication that the boxes are acceptable for installation in concrete or cinder fill either on the box, as part of the instructions, or on the packaging carton.

Where field installation of certain types of equipment or components is acceptable (which may include terminals, terminal strips, terminal blocks, jumpers, busbars and conduit fittings), the installation instructions provided with the product will specify the type, number and mounting arrangements for the equipment or components to be installed.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Conduit Box for Use in Hazardous Locations
- Junction Box for Use in Hazardous Locations
- Outlet Box for Use in Hazardous Locations
- Pull Box for Use in Hazardous Locations

The words “Hazardous Locations” may be abbreviated “Haz. Loc.” Other product identities may be used as shown in the individual listings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category may include one of the following, depending upon the construction and application:

- ANSI/UL 50, “Enclosures for Electrical Equipment” (11th ed.)
- ANSI/UL 50, “Enclosures for Electrical Equipment, Non-Environmental Considerations” (12th ed.)
- ANSI/UL 50E, “Enclosures for Electrical Equipment, Environmental Considerations”
- ANSI/UL 1058, “Industrial Control Equipment”
- ANSI/UL 1054B, “Conduit, Tubing, and Cable Fittings”
- ANSI/UL 514B, “Wire Connectors”
- ANSI/UL 486E, “Equipment Wiring Terminals for Use with Aluminum and/or Copper Conductors”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for the products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for the products includes the UL symbol (as illustrated) together with the text “LISTED,” a control number, and the product name “Junction and Pull Box for Hazardous Locations,” “Junction Box for Hazardous Locations,” “Pull Box for Hazardous Locations,” “Conduit Box for Use in Hazardous Locations,” “Outlet Box for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings. The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

******

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BRAKES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (BHIX)

GENERAL

This category covers brakes intended primarily for holding purposes, but may be used for stopping light-inertia loads.

This category includes two types of electric brakes. One type is intended to be attached directly to a certified motor at the factory of the motor manufacturer in accordance with instructions provided by the brake manufacturer. The other type is provided with a mounting bracket and is coupled to the motor.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the brake is acceptable for Groups A, B, C and D. The brake is also marked with the operating temperature code designating the maximum internal or external surface temperature determined at rated full-load torque marked on the brake, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure. If the brake is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor to which the brake is coupled is deenergized, and vice versa.

Pull Box for Use in Class II, Division 2 locations, the enclosure is of the totally enclosed type. The brake is marked with the operating temperature or operating temperature code designating the maximum full load external temperature determined at rated full-load torque (as marked on the brake), when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

The Certification Mark on a brake applies to the brake only, not to driving equipment, such as a motor.

PRODUCT IDENTITY

The following product identity appears on the product:

- Electric Brake for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II, and III, Division I and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category is ANSI/UL 674, “Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations,” or the requirements contained in UL Subject 1836, “Outline of Investigation for Electric Motors and Generators for Use in Classes I, II, and III Divisions.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

LOOK FOR THE UL MARK ON PRODUCT
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Brake for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING MATERIALS (BHWV)

DISCRETE PRODUCTS INSTALLED IN AIR-HANDLING SPACES (BHZF)

The test provides data with regard to peak rate of heat release, maximum peak normalized optical density and maximum average normalized optical density during fire exposure of the certified materials. Products complying with UL 2043 have demonstrated the following characteristics:

1. A peak rate of heat release of 100 kW or less
2. A peak normalized optical density of 0.50 or less
3. An average normalized optical density of 0.15 or less

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Various discrete products, many containing electrical features, that are intended for installation in air-handling spaces are investigated in accordance with established electrical or other requirements, as well as UL 2043. These products or devices are so certified under the applicable product categories covering those products, as shown below:

Audio/Video Apparatus (AZSQ)
Audio/Video, Information and Communication Technology Equipment (AZQI)
Commercial Audio and Radio Equipment, Systems and Accessories (AZJX)
Communications-circuit Accessories (DUXR)
Control and Communication Equipment (PGWM)
Control Dampers (EIMZ)
Electric Actuators (XABE or XABE2)
Fluorescent Lamp Ballasts (FKVS)
Hangers, Pipe (VIAX)
Information Technology Equipment Including Electrical Business Equipment (NWGQ)
Outlet Boxes and Fittings Certified for Fire Resistance (CEYY or QBWY)
Positioning Devices (ZODZ)
Power Supplies, General Purpose (QQLF)
Power Supplies, Specialty (QQJM)
Smoke-control System Equipment (UUKL)
Speakers (UEAX)
Speakers and Amplifiers for Fire-protective Signaling Systems (UUMW)
Suspended-ceiling-grid Low-voltage System Accessories (IFFC or IFFC2)
Suspended-ceiling-grid Low-voltage Systems (IFFA or IFFA2)
Telephone Appliances and Equipment (WYZQ)
Through-penetrations for Exposed Buildings (XHLY)

In general, the Codes noted under GENERAL above reference the use of UL 2043 for electrical equipment with combustible outer enclosures. Specifically, the “National Electrical Code” and the “International Mechanical Code” expressly state that electrical equipment with metal enclosures shall be permitted. Consequently, UL 2043 is not intended to apply to electrical equipment with metal outer enclosures unless otherwise specified by end-product-standard requirements.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

Credential
Covered by the individual Classification
Credit
Covered by the individual Certification

ADDITIONAL INFORMATION

Building Materials (BHWV)

Discrete Products Installed in Air-handling Spaces (BHZF) – Continued

For additional information, see Building Materials (ABBM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2043, “Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO HEAT-RELEASE RATE AND SMOKE OPTICAL DENSITY ONLY

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY ONLY

-control No.

+ The product name or other appropriate product description as shown in the individual Classifications

GENERAL

Fire-resistance ratings are included for:

1. Assemblies, such as beams, floors, roofs, columns, and walls and partitions. These fire-resistance designs provide the detailed construction of the assemblies and the components used.
2. Systems, such as construction joint systems, through-penetration firestop systems, electrical circuit protective systems and duct assemblies. These designs provide the detailed construction of the systems and the components used.
3. Opening protectives, such as dampers, fire doors, glazing and related equipment. Opening protectives are used to protect openings in fire-resistance-rated assemblies.

These materials are intended for use only in specific assembly or system designs as described in the general Guide Information for each product category and individual certifications, except for opening protectives. Opening protectives have been investigated for use as described in the instructions and markings provided with the opening protectives. The use of the materials and opening protectives in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of certified products, however, it is not necessarily indicative of limitations for those certified products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for certification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products certified to an IEC or ISO standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

LOOK FOR THE UL MARK ON PRODUCT
The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer’s declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL’s safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that product.

TECHNICAL SERVICE

Fire-resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.

Design Modifications

Careful consideration needs to be given to alterations or modifications of the fire-resistance assemblies.

When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire-resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.

Contacting UL

UL provides assistance to users of fire-resistance assemblies and products, which includes clarification of the published information.

UL also provides a service to investigate modifications to the fire-resistance assemblies when requested by the design submitter. Requests for clarification should describe the change and include drawings, if necessary.

Requests for clarifications or investigations can be made by contacting UL at:
- Phone: +1 877-ULHELPS (+1 877-854-3577) x49590
- E-mail: archservices@ul.com
- UL’s website: www.ul.com

******

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
NUMBERING SYSTEM FOR FIRE-RATED ASSEMBLIES

The prefix numbers with an asterisk (*) and the design numbers indicated as “Reserved” in the above table are for future expansion and to cater to new types of systems developed in the future.

+ SFRM denotes Spray-applied Fire-resistive Materials

1. Rapid-rise Fire Test

Fire-resistance designs for protecting structural members subject to petrochemical exposure fires are investigated to ANSI/UL 1709, “Rapid Rise Fire Tests of Protection Materials for Structural Steel,” and are covered under Fire-resistance Ratings – ANSI/UL 1709 (BYBU). Systems complying with these requirements include an “XR” design prefix.

2. Definitions

Definitions of selected terms used to identify the types of protection referenced in the following Numbering System Table are:

- **Batts and Blankets** — A category for a group of UL-certified products. The complete description of the products in the category and supplementary requirements for certification are covered under Batts and Blankets (BZJZ).
- **Building Units** — A category for a group of UL-certified products. The complete description of the products in the category and supplementary requirements for certification are covered under Building Units (BZXZ).
- **Concealed Grid System** — Suspension system for acoustical material that is not visible from the occupied space.
- **Exposed Grid System** — Suspension system for acoustical material that is visible from the occupied space.
- **Fire-resistant Joint System** — An assemblage of specific materials or products rated in accordance with ANSI/UL 2079 to resist for a prescribed period of time, the passage of fire through joints between fire-resistance-rated assemblies. See Joint Systems (XHBN).
- **Insulating Concrete** — Nonstructural concrete with a unit weight less than 60 pcf.
- **Membrane Penetration** — An opening made through one side (wall, floor or ceiling membrane) of a fire-resistance-rated assembly.

Mineral and Fiber Boards — A category for a group of UL-certified products. The complete description of the products in the category and supplementary requirements for certification are covered under Mineral and Fiber Boards (CERZ).

Miscellaneous (Direct-applied Protection) — Various types of fire-resistive coating materials, including intumescent mastic and subliming coatings.

Miscellaneous (Wall and Partitions) — Various types of wall assemblies, including gypsum wallboard shaft walls, log walls, folding assemblies and assemblies with glazing materials.

Partition Panel Units — A category for a group of UL-certified products. The complete description of the products in the category and supplementary requirements for certification are covered under Units, Partition Panel (CJMR).

Prefabricated Building Columns — Structural building columns that include a fire-resistive protection system when delivered to the construction site. These products are certified and identified as Prefabricated Building Columns (CCHI). The complete description of the products and supplementary requirements for certification are covered under CGHT.

Through Penetration — An item such as a pipe, cable tray or duct that passes through a horizontal or vertical fire-resistive assembly.

Unprotected Fire-resistive Assemblies — Assemblies that do not require direct-applied coatings or suspended ceilings to protect the structural elements.

3. Numbering System

The summarized form of the test assembly is identified by an alphanumeric design number. The prefix letter designates the group of construction,
the first number designates the type of protection, and the other numbers and letters identify the particular assembly. The prefix letters representing the various groups of constructions are:

Prefix Letters  Group of Construction
A  Floor-Decking Designs – Concrete with Cellular Steel
B  Floor-Deckings – Concrete with Steel Floor Units
D  Floor-Decking Designs – Concrete with Steel Floor Units and Beam Support
G  Floor-Decking Designs – Concrete and Steel Joists
I  Non-load-bearing Horizontal Barrier
J or K  Floor-Decking Designs – Precast and Field Poured Concrete
L  Floor-Decking Designs – Wood or Combination Wood and Steel Joist Assemblies
N  Beam Designs for Floor-Ceiling Assemblies
P  Roof-Ceiling Designs
S  Beam Designs for Roof-Ceiling Assemblies
U or V  Wall and Partition Designs
X or Y  Column Designs

II. GENERAL

The following information is applicable to all fire-resistive designs described in this Directory. It is recommended that the users review this information in addition to the general guidelines provided for specific materials and construction types.

Authorities Having Jurisdiction should be consulted before construction. Fire-resistance ratings apply only to assemblies in their entirety. Except for those separately rated structural members supporting tested assemblies, individual components are not assigned a fire-resistance rating and are not intended to be interchanged between assemblies but rather are designated for use in a specific design in order that the ratings of the design may be achieved. Unless otherwise specified in the individual design or certification, attachments to structural steel have not been investigated.

All ratings are based on the assumption that the stability of the structural members supporting the assembly are not impaired by the effects of fire. The extent of damage of the test assembly at the rating time is not a criteria for the rating.

The specifications for materials in an assembly are important details in the development of fire-resistance ratings. Those materials provided with an “*” in the design text are eligible to be produced under the Follow-Up Service Program of UL. Information identifying such materials and the certified companies authorized to provide the materials are located in the product category section of this Directory. The appearance of the UL Certification Mark on the product is the only method provided by UL to identify products that have been produced under its Follow-Up Service.

1. Metric Dimensions

It is recommended that the “Metric Guide for Federal Construction,” published by the National Institute of Building Sciences (NIBS), be consulted for guidance regarding the use of metric-dimensional building materials. The dimensional conversion of building materials from the inch-pound system to metric may either be hard or soft.

Hard conversions are typically applied to manufactured products used in modular construction. These products include suspended-ceiling systems, gypsum wallboard, insulation boards, etc. Certified products which are available in metric sizes are identified in the certification information for the individual product categories located near the end of this Directory.

For soft conversions, inch-pound dimensions are mathematically converted to exact equivalent metric values. Examples of dimensions which may be soft converted include concrete thickness, depth of concealed space above suspended ceilings, and coating thicknesses.

It is recommended that dimensions which are identified as minimum or maximum in fire-resistive designs be initially soft converted and, if required, further converted to a hard metric equivalent following the min/ max guidance. The spacing of hanger wire and other supports for suspended ceilings would be examples requiring this type of consideration.

2. Loading of Test Specimens

ANSI/UL 263 requires the load applied to test samples to be based upon the limiting conditions of design as determined by nationally recognized structural design criteria. For some applications, the nationally recognized design criteria may be based upon the Working Stress Design Method or the Limit States Design Method. For applications where these design methods are available, the load applied to the test sample was determined in accordance with the Working Stress Design Method unless the rated assembly specifically references the Limit States Design Method. Also, unless otherwise stated, the load capacity of steel beams assumes the beams are fabricated from A36 steel.

ANSI/UL 263 permits samples to be tested with the applied load being less than the maximum allowable load as determined by the limiting conditions of a nationally recognized structural design criteria. The ratings for assemblies determined from tests where the applied load was less than allowed by the nationally recognized structural design criteria are identified as “Restricted Load Condition.” The percent of the maximum load, the percent of the maximum stress, and the nationally recognized design criteria is identified in the text describing the structural element of rated assemblies with a restricted load condition. An example of the text used in an assembly with a restricted load condition and steel joist loaded to 80% of the maximum allowable is:

The load design for the structural member described in this design should not exceed 80% of the maximum allowable load specified in “Catalog of Standard Specifications and Load Tables for Steel Joists and Steel Joists,” published by the Steel Joist Institute, or (2) develop a tensile stress greater than 24 ksi, which is 80% of the maximum allowable tensile stress of 30 ksi. (Note: The maximum allowable total load develops a tensile stress of approximately 30 ksi.)

Some restricted-load conditions have resulted from changes in product availability. An example is the substitution of K4-Steel joists for other series joists as described under Section III, FLOOR-CEILINGS AND ROOF-CEILINGS, Item 7, Steel Joists.

Assemblies tested with less than the maximum allowable load that would result from loading calculated using the Limit States Design Method are identified as “Load Restricted.” The Percent Load Reduction and corresponding Load Restricted Factor for typical assemblies noted in Table I are based upon loading calculated in accordance with the Working Stress Design Method as compared to loading calculated in accordance with the Limit States Design Method. The calculations were performed for assemblies representing spans and member sizes of typical fire-test assemblies. The loads were calculated assuming a span of 4 m for floors and roofs and 3 m for walls.

Some fire-resistive designs are specified with a Load Restricted Factor. When using fire-resistive designs with a Load Restricted Factor, the factored resistance of the structural members or components should be reduced by multiplying the factored resistance by the Load Restricted Factor specified in the individual fire-resistive design.

The Load Restricted Factor should be applied to the factored resistance of all structural members or components, including, but not limited to, factored moment resistance (Mf), factored shear resistance (Vf), factored tensile resistance (Tf), and factored compressive resistance (Cf).

<table>
<thead>
<tr>
<th>Type of Assembly</th>
<th>Percent Load Reduction (LSD-WSD) / LSD</th>
<th>Load Restricted Factor</th>

<td>0.71</td>
</tr>
<tr>
<td>Steel columns</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The ratings for floors supported by cold-formed steel channels and walls supported by cold-formed steel studs do not have a Load Restriction Factor because the associated loads in Canada and the U.S. are based on the same standard: CSA S136, “North American Specification for the Design of Cold-Formed Steel Structural Members,” and “North American Specification and Commentary for the Design of Cold-Formed Steel Structural Members.”

Unless otherwise specified in the individual designs, columns do not have a Load Restriction Factor, as those ratings are based on temperature limitations in accordance with CAN/ULC-S101.

The engineer of record should be consulted whenever fire-resistive assemblies with Load Restricted Factors are selected. The indicated load reductions are based upon factored load effects that are governed by the reduced factored resistance of the structural elements. The selection of structural elements is, at times, based upon service limits, such as deflection and vibration. These factors and others, such as the change in material strength properties as a function of temperature, should be considered when selecting fire-resistive assemblies with Load Restricted ratings.

Unless stated in a design, it is recommended the Load Restricted Factors in Table I be used.

Assemblies developed from tests where the load applied on the sample was based upon calculations in accordance with the Limit States Design Method are identified in the individual certifications.

3. Penetrations

Penetrations through all or a portion of an assembly can significantly affect the rating. Firestop systems developed to protect openings created by penetration items are covered under Through-penetration Firestop Systems (XHE).
A finish rating is established for assemblies containing combustible (wood) supports. The finish rating is defined as the time at which the wood stud or wood joist reaches an average temperature rise of 250°F or an individual temperature rise of 325°F as measured on the plane of the wood nearest the fire. A finish rating is not intended to represent a rating for a membrane ceiling. The requirements for finish ratings are not included in ANSI/UL 263.

5. Nails and Screws

Nails are specified according to ASTM F547, “Standard Terminology of Nails for Use with Wood and Wood-Base Materials,” or ASTM C514, “Standard Specification for Nails for the Application of Gypsum Board.” Nails used to attach gypsum board to wood framing should be cement-coated box nails or cement-coated nails unless specifically otherwise in the individual designs. Screws meeting ASTM C1002, “Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs,” or ASTM C954, “Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness,” may be substituted for nails, one for one, when the head diameter, length, and spacing equal or exceed the requirements for the specified nails.

6. Interior and Exterior Applications

The fire-resistive designs and UL-certified materials are investigated with the understanding that their use is limited to interior applications unless otherwise specifically indicated in the individual designs or certification documents (e.g., structural columns “Investigated for Exterior Use”). Where an exterior application of a UL-certified design is desired, the local building code and Authority Having Jurisdiction should be consulted to ensure compliance with other code requirements applicable to exterior use.

7. Exposed Interior Finishes

The surface flammability and smoke-development characteristics of certified materials that may be used as exposed interior finishes are measured by the test method in ANSI/UL 725 (ASTM E84), “Test for Surface Burning Characteristics of Building Materials.” The flame-spread index of these certified materials is less than 200 and the smoke-development index of these materials is less than 450. Surface-burning certifications are contained in the Building Materials Directory.

8. Radiant Heating Cable and Panels

The effect of the use of electrical radiant heating cable or wire on the fire-resistance performance of assemblies has not been investigated. Unless otherwise specified in the specific design, the use of electrical radiant heating panels in a fire-resistive-rated assembly is not permitted.

9. Coating Materials

Coating materials include products identified as: 1) Spray-applied Fire-Resistive Materials and 2) Mastic and Intumescent Coatings. The type of material is specified in each design. Materials that have been investigated for exterior applications are so indicated in the individual designs and in the product category.

Regulations governing the application and use of coating materials have been promulgated by many governmental agencies. Authorities Having Jurisdiction should be consulted for local requirements.

Unless specifically detailed in the individual designs or in the product certification information, the interaction of dissimilar fireproofing materials on the same structural element or at the intersection of structural members, and the adherence of one product to the other, has not been investigated under fire-test conditions.

Unless specifically detailed in the individual designs or in the product certification information, the impact of galvanization applied to structural steel members has not been investigated under fire-test conditions. Galvanization may impact the adhesion of spray-applied fire-resistant materials or mastic and intumescent coatings.

Spray-applied Fire-resistive Materials

The surfaces on which the material is to be applied must be free of dirt, oil and loose scale. Surfaces may be primed by the primers/paints covered under Primers for Structural Steel (CGM).

The following method of determining the bond strength of the spray-applied materials only applies to primers or paints that are not covered under Primers for Structural Steel (CGM). When specifically detailed in the individual designs, materials identified as Spray-applied Fire-Resistive Materials (CHP) may be applied to primed or similarly painted wide-flange steel shapes and pipe and tube-shaped columns provided: (A) the beam flange width does not exceed 12 in.; (B) the column flange width does not exceed 16 in. (C) the beam or column web depth (defined as inside of top flange to inside of bottom flange) does not exceed 16 in.; (D) the pipe outer diameter or tube width does not exceed 12 in.; (E) bond tests conducted in accordance with ASTM E736, “Standard Test Method for Cohesion/Adhesion of Sprayed Fire Resistive Materials Applied to Structural Members,” should indicate a minimum average bond strength of 80% and a minimum individual bond strength of 50% when compared to the bond strength of the fire-resistive coating as applied to clean uncoated 1/8 in. thick steel plate. The average and minimum bond strength values should be determined based upon a minimum of five bond tests conducted in accordance with ASTM E736.

The bond tests need only be conducted when the fire-resistant coating is applied to a primed or similarly painted surface for which acceptable bond strength performance between the primer or other similar material and the fire-resistant coating has not been measured. A bonding agent may be applied to the primed or similarly painted surface to obtain the minimum required bond strength where the bond strengths are found to be below the minimum acceptable values.

As an alternative to the bond test conducted on control samples applied to an uncoated steel plate, the following method may be used for unknown coatings in existing structures. Sections of painted steel are to be coated with a bonding agent compatible with the sprayed material being used on the project. The treated and untreated substrates should be coated with materials not otherwise specified in the individual designs. Bond strength tests each coated to untreated samples cured, and subjected to minimum 12 in. centers, on each longitudinal edge of the strip, so that the clear spans do not exceed 16 in. Total bond tests established in conditions (A), (B), (C) or (D) as appropriate. No less than 25% of the width of the size. Flange or web element should be covered by the metal lath. No strip of metal lath should be less than 3/12 in. wide. As an alternative to metal lath, the mechanical break may be provided by the metal lath. The mechanical break may be provided by the method fastening one or more minimum 1.7 lbs per sq. Yd metal lath strips to the flange, web or tube and pipe surface either by weld, screw, or powder-actuated fasteners, on maximum 12 in. centers, on each longitudinal edge of the strip, so that the clear spans do not exceed the limits established in conditions (A), (B), (C) or (D) as appropriate. The spacing of studs along each row should not exceed 24 in. and a minimum one stud per 256 square in. should be provided.

Where metal lath strips or steel studs and discs are used, acceptable bond strength as described in item (E) should also be provided. A bonding agent may be applied to the painted surface to obtain the required minimum bond strength where bond strengths to a painted surface are found to be below minimum acceptable values.

The dry density at which sprayed material should be applied to building elements is specified in the individual designs. Dry-density measurements may be determined by removing at least 6 in. sq sections randomly selected from the building, subjecting the samples to 120°F in an oven until constant weight is obtained, followed by accurate weighing, measuring and calculating the density in lbs per ft. The minimum allowable individual thickness should be measured to the face of the lath unless specified otherwise in the individual designs.

Individual measured thickness, which exceeds the thickness specified in a design by 1/4 in. or more, should be recorded as the thickness specified in the design plus 1/4 in. For design thicknesses 1 in. or greater, the minimum allowable individual thickness should be design plus 1/4 in. For design thicknesses less than 1 in., the minimum allowable individual thickness should be the design thickness minus 25%. The thickness of the spray-applied fire-resistive material should be corrected by applying additional material at any location where (1) the calculated average thickness of the material is less than that required by the design or (2) an individual measured thickness reading is more than 1/4 in. less or more than 25% less (for design thicknesses greater than 1 in. and less than 12 in., respectively) than that required by the design.

Areas of the structural frame and/or floor area are to be selected to obtain representative average thicknesses. Thickness readings on the floor or wall members are to be taken symmetrically over the selected area. The average of all measured thickness. Thickness measurements on beams and/or columns are to be made at the member at sections within 12 in. of each other. The average thickness is to be considered the average of the readings taken at both sections.

Scrutinizing the steel roof deck in all P700 and P800 Series designs requires spray-applied fire-resistant material. The spray-applied fire-resistant material specified in the design should be applied to cover the tips at a minimum thickness of 1/2 in.
Mixing and spraying instructions are included with each container of material.

**Mastic and Intumescent Coatings**

The surfaces on which the material is to be applied must be free of dirt, oil and loose scale. The certification information for materials identified as Mastic and Intumescent Coatings (CDWZ) should be consulted for specific recommendations regarding the application of the coating over primed painted surfaces.

The mastic and intumescent coating average thickness should not exceed the maximum thickness published in the individual designs and no individual thickness measurement should be less than 80% of the thickness specified in a design.

Mixing and spraying instructions are included with each container of material.

When mastic and intumescent coatings are exposed to fire, they expand and form an insulating char. Unless otherwise detailed in the individual designs, mastic and intumescent coatings are tested without any covering adjacent to the tested member that might interfere with the expansion of the coating. The effect on the fire-resistance rating of steel members (beams, columns, etc.) caused by any covering that would interfere with the expansion of a mastic and intumescent coating during a fire has not been investigated. Contact the manufacturer for their required clearance around structural members protected with mastic and intumescent coatings.

**10. Gypsum Board**

Vertically applied gypsum board is gypsum board that is applied with the long edges parallel to the framing members to which it is attached. Horizontally applied gypsum board is permitted as long as the fastener length is increased to provide penetration into framing that is equal to or greater than that achieved with the specified gypsum board thickness and fasteners.

Additional layers of gypsum board are permitted to be added to any design.

For designs containing the statement, “See Gypsum Board (CKNX) Category for names of Classified Companies,” any product in CKNX that meets the specifications described in the individual designs may be used. This statement is applicable to any gypsum board manufacturer who produces certified gypsum board meeting all requirements specified in the individual designs. It is not required that these Design Numbers appear in the individual company’s certification found in CKNX.

**11. Gypsum Board Joint Treatment (Fire Taping)**

Unless otherwise specified in the individual designs, all gypsum board systems except those with predecorated or metal-covered surfaces have joints taped and joints and fastener heads covered with one coat of joint treatment.

Base layers in multi-layer systems are not required to have joints or fastener heads taped or covered with joint compound.

**12. Plaster**

The proper aggregate and mix proportions are specified in each design. Thicknesses are measured from the outer face of the plaster base. When a finish coat is not specified, it is not included in the thickness dimensions, but it may be added. Materials investigated for exterior application are so indicated in the individual designs.

**13. Dampers**

Building codes include requirements for four types of dampers: fire dampers, smoke (leakage-rated) dampers, ceiling dampers, and corridor dampers. Dampers have been investigated for installation in wall or ceiling constructions in the maximum sizes and orientations (vertical or horizontal) indicated in their certification. Dampers have been investigated for the following applications:

**Fire Dampers (EMME)** are intended for use where air ducts and air-transfer openings traverse fire-resistance-rated walls and floors.

**Leakage-rated (Smoke) Dampers (EMME)** are intended for use where air ducts and air-transfer openings traverse smoke barriers.

**Corridor Dampers (EMME)** are intended for use where air ducts penetrate or terminate at horizontal openings in the ceilings of certain corridors, as required by the building code.

**Ceiling Dampers (CABS)** are intended to function as a heat barrier in air-handling openings penetrating fire-resistive membrane ceilings. Additional details on duct outlet protection methods for membrane ceiling constructions are indicated in Systems A and B and is included under Section III.

**14. Wood Structural Panels**

Wood structural panel are structural panel products composed primarily of wood and meeting the requirements of U.S. Department of Commerce Voluntary Product Standard PS 1, “Construction and Industrial Plywood,” or U.S. Department of Commerce Voluntary Product Standard PS 2, “Performance Standard for Wood-Based Structural-Use Panels.” Wood structural panels include all-veneer plywood, composite panels containing a core of wood-based material, and mat-formed panels such as oriented strand board and waferboard. The panels bear the label of a code-recognized certification organization with a specific reference to the PS 1 or PS 2 standard. The panels are also marked “Exposure 1” or “Exterior.” Some individual designs may limit the type of panel that can be used.

As an alternate, wood structural panels investigated in accordance with APA – The Engineered Wood Association Standard PRP-108, “Performance Standards and Policies for Structural-Use Panels,” or FFS Research Foundation Standard PRP-133, “Performance Standards and Policies for Wood-Based Structural-Use Panels,” and meeting the description for the panel type in the individual designs, may be used.

**15. Sound Transmission Class (STC)**

In addition to the fire-resistance ratings, where indicated in the individual designs, the Sound Transmission Class (STC) rating is published for those designs where the sound transmission loss (STL) test was also investigated. ASTM E492 (2009), “Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine,” is the test method used to investigate the impact noise of the design. The IIC rating applies to the assembly of materials as indicated in the individual designs.

**16. Impact Insulation Class (IIC)**

In addition to the fire-resistance ratings, where indicated in the individual designs, the Impact Insulation Class (IIC) rating is published for those designs where the impact noise test was also investigated. ASTM E492 (2009), “Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine,” is the test method used to investigate the impact noise of the design. The IIC rating applies to the assembly of materials as indicated in the individual designs.

**17. Curtain Wall/Floor Protection Systems**

Perimeter Fire Containment Systems (XHDG) includes designs that have been investigated to protect the void created at the intersection of a fire-rated floor assembly and an exterior curtain wall assembly.

**18. Fire-resistant Joint Systems**

Joint Systems (XHBN) includes designs that have been investigated to protect the joints between fire-resistance-rated walls, floors, floor-ceiling assemblies and roof-ceiling assemblies.

**19. Fire Doors, Frames and Hardware**

See the individual categories under Fire Doors (GSNV) for products associated with fire doors, frames and associated hardware. This includes leakage-rated products investigated to limit the spread of smoke through such assemblies.

**20. Glazing, Wired Glass and Glass Blocks**

Fire-protection-rated Glazing Materials (KCMZ) contains information on wired glass and nonwired glazing investigated for fire resistance. Glass Blocks (KCJU) contains information on glass blocks investigated for fire resistance.

**III. FLOOR-CEILINGS AND ROOF-CEILINGS**

The following guidelines are directed towards the materials and construction methods described for floor-ceiling and roof-ceiling assemblies. These guidelines are intended to supplement the specific description included with each design. Specific guidelines for the application of beam designs to floor-ceiling and roof-ceiling assemblies are provided in this Directory under the heading “Beams.”

**1. Concrete**

The concrete compressive strength specified in the designs may be reduced to 500 psi to obtain a minimum value. The maximum compressive strength is not limited. The thickness is a minimum unless otherwise indicated.

The concrete’s air dry unit weight is determined in accordance with ASTM C676, “Standard Test Method for Determining Density of Structural Lightweight Concrete.” The unit weight specifications (unless stated as a range for individual designs) have a tolerance of plus or minus 3pcf. If normal-weight concrete (145 to 155pcf) is specified, the use of lightweight concrete (90 to 120pcf) is not recommended because its greater insulating properties could cause higher temperatures on supporting members. When lightweight concrete is specified, the use of normal-weight concrete is not recommended because the fire-resistance properties could cause higher unexposed surface temperatures.

**2. Fiber Reinforcement**
Certified synthetic fiber reinforcements may be added to the concrete mix for the purpose of controlling shrinkage cracks.

These fibers are not intended to satisfy any structural requirements. The structural capacity of the concrete slab should be maintained in accordance with the requirements of the ACI building code.

3. Steel Floor and Form Units
The type of unit and the minimum steel thickness is specified in each design.

The steel floor and roof deck minimum thickness table is based upon an industry standard for steel deck. The load tables published by the steel deck industry are based upon the design thickness and a 5% tolerance is applied to derive the minimum thickness. The tolerance is in accordance with American Iron and Steel Institute specifications. For steel floor and roof deck, the minimum bare-metal thickness should be as follows:

<table>

The effect on the fire resistance of the assembly when cellular sections are used as air-handling units has not been investigated.

Some steel units are provided with patterned indentations and are thereby considered to act compositely with the concrete topping. Moment and shear capacities are usually determined empirically from structural tests. The allowable load is provided in the manufacturer’s catalog. The loading for floors with noncomposite units (without indentations) is based on their section modulus. Some fire tests have been conducted on slabs utilizing the composite units but with the loading based on the section modulus of the steel. In such cases, deflection will specify noncomposite. The slabs have generally shown that composite slabs deflect more than similar noncomposite slabs. Therefore, the ratings developed with composite units would not be jeopardized if noncomposite units of the same profile are used provided the loading is based on the section modulus of the noncomposite units.

The steel form units used in floor or roof assemblies may be painted or galvanized when used in designs that include suspended ceilings (Designs G–2, C–2, G–4, G–5, P–0, P–2, P–4). In designs that specify the steel form units to be welded to supports with welding washers, the welding washers may be omitted when the steel form unit is 22 MSG gauge or heavier.

Normally, assemblies with steel deck are constructed and tested with simple span conditions, however, the ratings also apply to continuous span conditions.

4. Electrical Boxes for Concrete Floors
Outlet Boxes and Fittings Certified for Fire Resistance (CEY) covers preset and post-set inserts that are used in concrete floors for electrical and communication connections. These devices have demonstrated an ability to be used in specific assemblies without reducing their fire-resistive ratings. In those floor-ceiling designs where the inserts are not specifically shown, penetrations to the concrete topping with electrically insulated inserts may jeopardize the rating unless proper compensating protection is provided. In the absence of specific information for inserts in the individual designs, inserts that do not penetrate through the entire floor and ceiling must be provided. Certified metallic outlet boxes with metallic or nonmetallic cover plates may be used in floor-ceiling and roof-ceiling assemblies with ratings not exceeding 2 hours. These assemblies should have gypsum wallboard membranes. The metallic outlet boxes should be securely fastened to the joists and the opening in the wallboard facing should be cut so that the clearance between the box and the gypsum wallboard does not exceed 1/8 in. The surface area of individual boxes should not exceed 16 sq. in. The aggregate surface area of the boxes should not exceed 100 sq. in. per 100 sq. ft of ceiling surface.

7. Steel Joists
The specified minimum-size joist in floor- or roof-ceiling designs is the joist that meets the requirements for both the minimum depth and the minimum weight per foot. Joists that exceed the specified minimum size may be used, provided the accessories are compatible. The dimension from the bottom chord of joists to the ceiling, whether given or calculated, is a minimum.

Spacing between joists may be increased from that specified to a maximum of 4 ft on centers if the slab floor meets structural requirements and the spacing of the hanger wires supporting the ceiling is not increased. Where it is necessary to provide support for the ceiling hanger wires, the spacing between the joists, this may be accomplished by using 1-1/2 in., 16 gauge or larger cold-rolled steel channels. Each channel with its web oriented vertically should be placed on top of and perpendicular to the joist’s bottom chord and tied thereto with a double strand of 18 SWG galvanized steel wire.

The area of bridging bars or angles specified in the individual designs is a minimum. Larger bridging may be necessary in order to meet the structural and/or code requirements.

When the joists are coated with a fire-resistive material, the cavities, if any, between the upper flange of the joist and the steel floor or roof units should be filled with the fire-resistive coating material applied to the joist, unless specified otherwise in the individual designs.

For designs that require the bottom chords of the joists to consist of round bars, a substitution of angles of an equivalent area is not recommended.

K-Series joists, LH-Series joists and joist girders specified in floor- or roof-ceiling assemblies should be designed and fabricated in accordance with the Steel Joist Institute’s Specifications adopted November 4, 1985, and revised May 1, 2000.

K-Series joists may be substituted for other joists specified in floor- or roof-ceiling designs as follows:

- **Floor-Ceiling Assemblies**
  - K-Series joists of equal or greater depth and weight per foot may be substituted for any S-, J-, H-, LH- and/or DLH-Series joists in any floor-ceiling design, which employs a structural concrete floor and a suspended membrane ceiling.

- **Roof-Ceiling Assemblies**
  - K-Series joists of equal or greater depth and weight per foot may be substituted for any S-, J-, H-, LH- and/or DLH-Series joists in any roof-ceiling design, with the following restrictions:
    - a) Minimum nominal depth = 10 in.
    - b) Maximum uniform stress = 20 kips/in.
    - c) Any stress limitation specified in floor or roof designs containing S-, J-, H-, LH- and/or DLH-Series joists should remain applicable when a K-Series joist is substituted.

When a K-Series joist is substituted, any restriction regarding minimum allowable joist member sizes, areas of steel, and/or bridging material sizes remain applicable. Refer to section “Fire-Resistance Ratings with Steel Joists” in the “Standard Specifications Load Tables & Weight Tables for Steel Joists and Joist Girders,” 41st edition, published by the Steel Joist Institute, for guidance.

8. Precast Concrete Units
Nonmetallic outlet boxes investigated for installation in floor-ceiling or roof-ceiling assemblies are certified under Outlet Boxes and Fittings Certified for Fire Resistance (CEY).

Ceiling Suspended Below Floor Assembly

1. **Floor Assembly** — (Not Shown) — The floor assembly should be constructed of the materials and in the manner described in the individual G500, L500 or M500-Series Floor-Ceiling design.

2. **Cold-rolled Steel Channel** — Nom 1-1/2 in. deep, min 16 gauge cold-rolled steel channels installed perpendicular to control joint direction. Channels suspended from floor joists with 12 SWG galv steel hanger wires. Hanger wires spaced max 48 in. OC. Channels spaced max 24 in. OC. Channels installed to extend approx 6 in. past control joint location with channels on opposite sides of control joint offset from each other. Hanger wire at end of each channel to be located in span between furring channels over control joint location.

3. **Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to control joint. Furring channel along each side of control joint to be located with its centerline 3 in. from the center of the control joint. Furring channels secured to cold-rolled steel channels with a double strand of 18 SWG galv steel wire.

4. **Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacings to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between furring channels is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.

5. **Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047. Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

Control Joint Parallel With Wood Joists

1. **Flooring** — Lumber or plywood subfloor with finish floor of lumber, plywood or floor-topping mixture as specified in the individual L500 or M500-Series Floor-Ceiling design.

2. **Wood Joists** — 2 by 10 in., spaced max 24 in. OC as specified in the individual L500 or M500-Series Floor-Ceiling design.

3. **Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to wood joists and spaced max 16 in. OC. Furring channels to cantilever approx 1/4 in. beyond wood joist in 4 in. wide joist cavity containing control joint. Furring channels secured to wood joists as specified in the individual L500-Series Floor-Ceiling design.

4. **Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacing to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between furring channels is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.

5. **Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047. Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

Control Joint Perpendicular to Wood Joists

1. **Flooring** — Lumber or plywood subfloor with finish floor of lumber, plywood or floor-topping mixture as specified in the individual L500 or M500-Series Floor-Ceiling design.

2. **Wood Joists** — 2 by 10 in., spaced max 24 in. OC as specified in the individual L500 or M500-Series Floor-Ceiling design.

3. **Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to wood joists and spaced max 16 in. OC. Furring channels to cantilever approx 1/4 in. beyond wood joist in 4 in. wide joist cavity containing control joint. Furring channels secured to wood joists as specified in the individual L500-Series Floor-Ceiling design.

4. **Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacing to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between furring channels is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.

5. **Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047. Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

10. **Acoustical Material**
The type and size is specified in the individual designs. Where a range of panel sizes is indicated, compatible sizes of suspension members must be used. Designs incorporating lay-in acoustical ceiling panels specify the use of hold-down clips. Hold-down clips are required for assemblies incorporating ceiling panels weighing less than 1 lb per square foot.

11. Suspension Systems
The type and size of ceiling suspension system are specified in the individual designs. Support of the system is an important feature in its performance. Spacing of the supports should not exceed but may be less than specified. When the length of the cross tee between the main runner and the wall molding is 30 in. or longer, each such cross tee should be supported by a hanger wire at midpoint of the tee or at a location nearer the wall unless specified differently in the design.

As an alternate to the wall molding specified in the individual designs, the molding may be an angle fabricated from minimum 0.017 in. thick steel. Each leg of the angle should be at least 7/8 in. long with a 0.115 in. hemmed edge. The wall molding should be reliably secured to the wall with steel fasteners on maximum 16 in. centers unless specified otherwise in a design. Cross tees which are parallel and adjacent to walls and are spaced 12 in. or less from the wall should each be supported by a hanger wire at midpoint. These hanger wires are intended to minimize their rotation under fire conditions due to the unbalanced weight of panels on their flanges.

Where a ceiling is supported directly from structural members, it may be lowered and intermediate supports may be used, if necessary, provided they produce an in-place stiffness equivalent to that of the originally tested elements. A suggested method for providing an equivalent in-place stiffness is by use of 1-1/2 in. round channel members with a 16 gauge or heavier painted or galvanized steel, with the web oriented vertically and suspended from the structural members by 12 SWG or heavier galvanized steel wire at a maximum spacing of 48 in. OC. The channels may be oriented parallel or perpendicular to the structural members but should be spaced not more than the spacing of the structural members.

Where it is necessary to cut away the expansion mechanism of suspension members to fit room dimensions or corridor widths, the member should be installed with a gap of approximately 1/10 in. per ft of length to permit free thermal movement.

Hanger wires should be installed vertically unless permitted otherwise in a design. Some floor-ceiling designs with structural concrete topping on steel floor units specify the use of steel hanger clips as an attachment provision for hanger wires. As an alternate to hanger clips, low-velocity, powder-actuated, steel-eyux pin fasteners may be used for hanger wire attachment in the floor-ceiling designs. The fasteners should have a minimum 5/32 in. diameter by minimum 7/8 in. long pointed shank with a washer and nominal 7/8 in. long by 7/16 in. wide containing a rounded slot opening. The fasteners are intended to be secured to concrete in valleys of fluted steel floor units with powder charges sufficient to fully embed the shank portion without shattering the concrete.

12. Fluorescent Recessed Luminaires
Luminaires may be installed individually or end to end (in rows). Side-by-side installation has not been investigated.

The spacing of luminaires specified in the individual designs refers to the maximum aggregate area per luminaire to be used in each 100 sq ft of ceiling. Unless specified otherwise, the luminaires are of the fluorescent-lamp type with steel housing and hardware.

Where air-handling-type luminaires were tested, the design may describe the luminaire as air-handling or, if provided with slots in the housing.

However, since no air movement was employed during the test, the ratings require that air movement be effectively stopped at the start of a fire. Air-handling luminaires may be used in any design that specifies luminaires, provided it is not necessary to alter the enclosure surrounding the luminaire and that provisions are made for effectively stopping the movement of air at the start of a fire.

In ceilings employing an exposed-grid suspension system, when hanger wire is required at midpoint of the cross tee on each side of luminaires, the wire should be installed with approximately 1/8 in. of slack such that it will not be pulling on the cross tee at room-temperature conditions.

13. Enclosures for Fluorescent Recessed Luminaires
Enclosures for luminaires should be spaced away from the top of the luminaires housing to provide clearance for the protection material and the top of the luminaire.

14. Luminaires Certified for Fire Resistance
In addition to the luminaries described above, luminaires specifically investigated for installation in floor-ceiling and roof-ceiling designs are covered under Luminaires, Luminaires Assemblies and Luminaires Enclosures.

Certified for Fire Resistance (CDHW). Refer to the individual CDHW certifications for details on the designs in which the luminaires have been investigated and found acceptable.

15. Restrained and Unrestrained Assemblies
Floor-ceiling and roof-ceiling assemblies include fire-resistance ratings for use in both restrained or unrestrained conditions. It is up to the designer and Authority Having Jurisdiction to determine if an assembly is being used in a restrained or unrestrained application, as required by the building code being enforced. Unrestrained Assembly ratings may be used for floor-coil and roof-coil designs for either restrained or unrestrained conditions.

The conditions of acceptance in ANSI/UL 263 provide criteria for Restrained Assembly Ratings, Unrestrained Assembly Ratings, Restrained Beam Ratings and Unrestrained Beam Ratings. Because of their more onerous criteria, Unrestrained Assembly Ratings may be used for floors and roofs designed for either restrained or unrestrained conditions.

Certificates resulting from a tested assembly containing a full representation of a floor or roof construction may include: (1) Restrained Assembly Ratings and (2) Unrestrained Assembly Ratings. Results from the testing of these assemblies are identified as Design Nos. A, D, G, J, or P. Tested assemblies supported by beams may also include an Unrestrained Beam Rating, but do not include a Restrained Assembly Rating. A Restrained Beam Rating is determined only from a test on an assembly with a restrained beam and a partial representation of a floor or roof. Results from tests on this type of assembly are identified as Design Nos. N, O, or S.

D900 Series Dual Unrestrained Assembly Ratings
Two unrestrained assembly ratings are indicated for some D900 Series floor-ceiling designs that include unprotected steel floor units. These unrestrained assembly ratings are influenced by the span of the steel floor units. For the longer span rating, only the span with which the assembly was tested. This rating is determined by the assembly’s structural performance during the fire test. The shorter rating is determined by the steel temperatures measured during the test and the span is limited only by the manufacturer’s loading tables.

Restrainment Conditions
Certifications of floor-ceiling and roof-ceiling assemblies and individual beams include restrained and unrestrained ratings. ANSI/UL 263 and, specifically, Appendix C, provides general information with respect to the concept of these classifications.

Restrained condition in fire tests is defined in Appendix C of ANSI/UL 263 as: “one in which expansion at the supports of a load carrying element resulting from the effects of the fire is resisted by forces external to the element.” This definition may not be appropriate for conditions of restrained conditions in the fire test environment as recognized that the exercise of engineering judgement is required to determine what constitutes “substantial thermal expansion” when determining the conditions under which the restrained or unrestrained ratings should be used.

Restrained conditions in the fire-tests assemblies are provided by constructing floor-, beam- and roof-test assemblies within nominal 14 ft by 17 ft frames of composite steel/concrete cross sections having an approximate stiffness (EI/L) of 850,000 kip-in. and 700,000 kip-in. along the 14 ft and 17 ft sides, respectively. The frame stiffness remains constant throughout the test because the test frame is insulated and restrained.”

When applying the published restrained ratings, it is recognized that the individual responsible for the design of the fire-rated construction may ascertain that a different degree of restraint may be provided to the building assembly during a fire test by providing a test sample during the fire test. Under these conditions, the designer may review the Conditions of Acceptance for restrained and unrestrained assemblies and beams in ANSI/UL 263 for additional guidance when determining whether restrained or unrestrained ratings should be specified.

16. Air Ducts and Protection Systems
For designs employing means for the movement of air, ANSI/NFPA 90A, “Installation of Air-Conditioning and Ventilating Systems,” or appropriate model building codes may be used to establish clearances for the protection material and the top of the luminaire.

Unless otherwise specified by the design, the ratings were developed based on fire tests employing no air movement. The ratings, therefore, require that air movement be effectively stopped at the start of a fire.

Unless specified otherwise, the minimum distance between the bottom of the duct and the top of ceiling membrane should not be less than 4 in.; where a greater minimum distance is specified, it may be reduced to 4 in. minimum. For ducts equipped with hinged sheet-steel dampers over duct
outlets, unless specified otherwise, the maximum distance between the bottom of the duct and the top of the ceiling should not exceed 8 in. When certified ceiling dampers are used, no limit is required for the maximum distance between the bottom of the duct and the top of the ceiling since fire dampers are installed close to the top of ceiling membrane per installation instructions. Where hinged sheet-steel dampers are specified, they should be equipped with spring catches and corrosion-resistant hinges. Dampers designed to close by gravity should be installed to close in the direction of the air flow. Air diffusers should be of steel and attached to the duct outlet with steel sheet-metal screws. Spacing of screws should be at least three equally spaced for round diffusers and 8 in. OC max per side for square diffusers, with no less than one on each side.

Except where noted in the individual designs, the air diffusers used in the test assemblies were of the surface-ventilated type which supported the surrounding acoustical material by a flange at least 1 in. wide. The opening in the ceiling membrane for attachment of the diffuser to the duct outlet should not be more than 1 in. greater than the size of the duct outlet. Lay-in-type diffusers may be used in the design. The maximum size of the duct outlet for the certified ceiling damper should be maintained between the duct outlet and the certified ceiling damper. To avoid establishing the full size of the certified ceiling damper, the maximum size of the duct outlet for the certified ceiling damper would apply. The size of the duct outlet should be no larger than the maximum size of the certified ceiling damper.

Some designs specify a smaller aggregate duct outlet area for each 100 sq ft of ceiling area than the maximum size of an individual outlet. In this case, when a certified ceiling damper is used, the allowable outlet area per 100 sq ft of ceiling area should be established based on the half of the area of the individual maximum size.

When a design requires the use of a covering material around the duct outlet and/or the hinged-door damper, the covering material or a material having equivalent thermal properties of the ceramic paper should be used. Air diffusers should be located in the field of an acoustical panel; however, where it is necessary to cut a main runner or cross tee, each cut end should be supported by a vertical 12 SWG hanger wire. A 1/2 in. clearance should be maintained between the duct outlet and each cut end of the main runner or cross tee. The duct outlet should be located so that no more than one main runner or cross tee is cut when penetrating the ceiling membrane.

Flexible air ducts may be used with certified air-terminal units designed for use in designs. The flexible air duct should be 6 to 8 in. diameter, Class 0 or Class 1 air connector or duct, bearing the UL Certification Mark. For assemblies with wood joints (“1” Series designs), air ducts only should be used. The flexible duct should be supported to 4 to 6 ft OC with steel straps and/or 12 SWG steel hanger wire so that no portion of the flexible duct is within 4 in. of the top of the ceiling membrane, except where connected to the air-terminal unit.

The following duct outlet protection may be used as alternate systems. System A may only be used when it is specified in the individual designs. System B may be used in any design that contains a steel duct with the duct outlet protected by a hinged-door damper, for equal or smaller outlet size. The systems have been investigated for their effectiveness in retarding the transfer of heat into the ceiling space, but their ability to retard smoke and other combustion products has not been investigated.

Duct Outlet Protection System A

1. **Steel Air Duct** — Construction and support provisions as specified in the individual designs. Outlet to be provided with a louvered, surface-mounted, steel air damper, fastened securely with steel fasteners. Duct supported by 1-1/2 in., min 0.053 in. thick (16 gauge) cold-rolled steel channel hung at each end from structural members of floor or roof with 12 SWG galv steel wire. When duct outlets are 144 sq in. or smaller, cold-rolled channels should be located adjacent to one or both sides of the duct outlet and spaced a max of 48 in. OC. When duct outlets are larger than 144 sq in., cold-rolled channels should be located adjacent to each side of the duct outlet and spaced a max of 48 in. OC.

2. **Glass Fiber Duct Lining** — Min 1 in. thick, 3.0 to 5.0 pcf density, unfaced or faced with foil, plastic film or asphalt emulsion. Lining affixed to inside of duct with adhesive or steel fasteners or both. Lining and adhesive should have a flame-spread rating of 25 or less and a smoke-developed index of 50 or less, as determined by ANSI/UL 723 and should comply with all other specifications in ANSI/NFPA 90A. Lining should cover the full inside perimeter of the duct, extending at least 12 in. beyond the edges of the duct outlet. Lining on bottom of duct to be cut flush with the edges of the duct outlet.

3. **Acoustical Lay-in Panel** — Any nom 5/8 in. acoustical lay-in panel certified by UL for use in fire-resistance designs. Panels should be located on top of duct, extending at least 6 in. beyond sides of duct outlet along width of duct, and extending at least 18 in. beyond sides of duct outlet along length of duct. More than one panel may be butted together to form a panel of the required dimensions. Panels should have a flame-spread index of 25 or less and a smoke-developed index of 50 or less as determined by ANSI/UL 723 and should comply with all other specifications in ANSI/NFPA 90A.

4. **Ceramic Paper** — Where specified by the individual fire-resistance design, ceramic paper should be affixed to the duct outlet.

Duct Outlet Protection System B

1. **Steel Air Duct** — Construction and support provisions as specified in the individual designs. Outlet to be provided with a louvered, surface-mounted, steel air damper, fastened securely with steel fasteners. Duct supported by 1-1/2 in., min 0.053 in. thick (16 gauge) cold-rolled steel channel hung at each end from structural members of floor or roof with 12 SWG galv steel wire. When duct outlets are 144 sq in. or smaller, cold-rolled channels should be located adjacent to one or both sides of the duct outlet and spaced a max of 48 in. OC. When duct outlets are larger than 144 sq in., cold-rolled channels should be located adjacent to each side of the duct outlet and spaced a max of 48 in. OC.

2. **Mineral Wool Batts** — 1-1/4 in. thick mineral wool batts, 3.5 to 8.0 pcf density. Top piece of batt should extend at least 3 in. beyond the sides of the duct and 6 in. beyond the edges of the duct outlet. Side pieces should extend from the lower face of the top piece to the upper face of the ceiling membrane along the entire length of the top piece. Side pieces tied to top piece with 18 SWG galv steel wire, 18 in. OC. Material should have a flame-spread index of 25 or less, a smoke-developed index of 50 or less as determined by ANSI/UL 723, and should comply with all other specifications in ANSI/NFPA 90A.

3. **Ceramic Paper** — Where specified in the design, ceramic paper should be affixed to the duct outlet.

17. **Blanket Insulation**

Unless specifically described in the individual designs, the addition of insulation in the concealed space between the ceiling membrane and the floor or roof structure may reduce the hourly rating of an assembly by causing premature disruption of the ceiling membrane and/or higher temperatures on structural components under fire-exposure conditions. Insulation in G300, L500, M500 and P500 Series designs — For 1-hour rated G500, L500, M500 and P500 Series assemblies, fiberglass insulation, either loose-fill, batts or blankets may be added to the plenum or joist space above the gypsum wallboard, provided an additional layer of gypsum wallboard is added to the assembly. The gypsum wallboard should be of the same type as shown in the individual designs. The base layer of wallboard should be attached with the fasterer type and spacing as described in the design. It is not necessary to tape the joints of the base layer. The finish layer of gypsum wallboard should also be attached with the fasterer type and spacing as described in the individual design. The length of the fasteners should be increased by a minimum of the wallboard thickness of the additional layer. The joints in the finish layer should be finished as described in the design.

2015-16 GUIDE INFORMATION FOR ELECTRICAL EQUIPMENT — THE WHITE BOOK

102

FIRE-RESISTANCE RATINGS - ANSI/UL 263 (BXUV)

Other methods of adding insulation in the plenum or joist cavity are not permitted unless indicated in the individual designs.

18. Wood Frame Construction
Spaces between joists or trusses and spaces between the ceiling and the floor above should be provided with firestopping or draft stopping as specified in the provisions of applicable building codes.

When a non-fire-rated wood stud wall assembly abuts the bottom of a wood joist floor-ceiling assembly employing a membrane ceiling, the membrane should be continuous above the top plate of the wall assembly.

19. Roof Coverings
Most roof assemblies are tested with Class C roof covering. The fire-resistance ratings for these assemblies are also applicable when the roof covering is a Class A, Class B or Class C combination of bituminous materials. The Class A, B, and C ratings are determined by ANSI/UL 790, “Standard Test Methods for Fire Tests of Roof Coverings.”

Class A, B, or C roof coverings consisting of hot-mopped or cold-applied bituminous materials or a roof-covering material certified under Roofing Membranes (CHC) may be applied directly to the concrete or wood surface of floor designs being used as roofs without a reduction of fire-resistance ratings.

Class A, B or C prepared roof coverings may be used on wood floor designs without a reduction of the fire-resistance rating, provided a nailing of equal thickness to the length of the mechanical fasteners is added to the flooring.

20. Roof Insulation
Roof insulation should be carefully controlled relative to manufacturer, type and thickness as specified. Less than the specified thickness could result in higher temperatures on the roof covering, while a greater thickness of insulation could cause earlier structural failure.

Certified polyisocyanurate, with a density of 5pcf or less, may be placed on concrete floors or structural concrete roofs without reducing the assembly rating.

When mineral and fiber boards, polypropylene insulation exceeding 5pcf or polyisocyanurate insulation is used over the concrete in D900 Series designs, the unstrained beam rating should be increased by a minimum of 1/2 hr.

21. Uplift Resistance
The resistance of roof assemblies to uplift by pressures on the roof surface or other damage that may result from high-velocity wind has not been investigated. Roof deck constructions certified for uplift resistance are illustrated in the Roofing Materials and Systems Directory.

22. Steel Roof Deck Fasteners
Steel roof deck fasteners that have been investigated as part of a roof deck construction may be used to fasten the roof deck to steel joists or beams in lieu of welding or screws in fire-resistive assemblies. See Roof Deck Fasteners (TLSX) for a list of manufacturers. See Roof Deck Constructions (TGKX) for a list of roof constructions that have been investigated for uplift resistance. The steel fasteners must be compatible with the construction shown in the individual fire-resistive designs.

Spray tips penetrating the steel roof deck in all P700 and P800 Series designs require spray-applied fire-resistive materials. The spray-applied fire-resistive material specified in the design should be applied to cover the tips at a minimum thickness of 1/2 in.

23. Steel Floor Unit Fasteners
The connection of steel floor or roof units to the supporting steel structure is specified in the individual design. For A__, D__, and G__ Series designs requiring full or partial coverage of the steel floor units to the supporting steel structure, powder-drilled fasteners may be used as an alternate to the full coverage, provided equivalent strength capacity is maintained in the connection.

Minimum 3/4-in. long #10 self-drilling screws may be used as an alternate to button-punching the side laps of adjacent steel floor and form units in A__, G__, and P__ Series designs. The spacing of the screws should be the same as indicated for the button punches.

IV. BEAMS

This section applies to W-, M-, or S-shaped hot-rolled structural steel sections as defined by the American Institute of Steel Construction. Unless otherwise noted in the individual certification or design, castellated beams have not been investigated.

The conditions of acceptability in ANSI/UL 263 provide criteria for Restrained Beam Ratings and Unrestrained Beam Ratings. A greater thickness of protection material is typically required for the Restrained Beam Rating as compared to the protection material thickness required for the Unrestrained Beam Rating based on the differences in the rating criteria.

Accordingly, Unrestrained Beam Ratings may be used for beams designed for either restrained or unrestrained conditions. Restrained Beam Ratings are not determined from this type of test assembly. Results from these tests are identified as Design Series Nos. A00, D00, G00, J00 or P00. The other type of test assembly contains a partial representation of the floor or roof construction being supported by the beam. Certifications resulting from this type of test assembly may include: (1) Restrained Beam Ratings and (2) Unrestrained Beam Ratings. Ratings for floor or roof assemblies are not determined from this type of test assembly. Results from these tests are identified as Design Series Nos. N00 or S00.

1. Beam Size
For fire-resistance purposes, the minimum beam size is expressed in terms of a W/D ratio, where W is the weight of the beam per lineal foot and D is the perimeter of protection material at the interface between the steel section and the protection material. Accordingly, beams of the same configuration and having a greater W/D ratio than the beam size specified in the fire-resistive design are considered larger than the specified minimum-size beam and may be used in that design.

W/D values are published by the American Institute of Steel Construction. In 2001, the method used to calculate the perimeter was refined to include the fillets of hot-rolled sections rather than assuming right-angle intersections. An example of this change results in the W/D value for a 8x8x28 section changing from 0.80 to 0.819.

Application of equations in the Fire-resistance Directory that include proportional relationship of the (W/D) value are not affected by the change in the calculation process for (W/D), provided the (W/D) values used are determined by a single method.

2. Composite and Noncomposite Beams
For assemblies that specify both Restrained and Unrestrained Assembly ratings, noncomposite beams may be substituted when composite beams are specified in a design because composite beams deflect more under fire conditions when loaded to their design load than noncomposite beams. Composite beams may only be substituted into designs which specify composite beams.

3. Cavities
Cavities, if any, between the upper-beam flange and the steel floor or roof units should be filled with the fire-resistive coating material applied to the beam, unless specified otherwise in the individual design.

4. Beam Substitution
Beam ratings depend upon the type of floor or roof the beam is supporting and the protection on the floor or roof units, as well as the type and thickness of protection material applied to the beam. The substitution of beams into a floor assembly (A-, D-, G-, or J- Design) or roof assembly (W- Design) should be limited to assemblies that have a similar or greater capacity for heat dissipation from the beam as compared to the capacity for heat dissipation of the floor or roof construction specified in the design from which the beam is being transferred.

For concrete floors, an equal or greater capacity for heat dissipation exists when the concrete has an equal or greater density range and volume per unit floor area.

Spray-applied Fire-resistive Materials

Application of N Series Designs

When it is the intent to maintain the existing Assembly Rating, the beams, steel joists and steel trusses from N Series designs may be substituted for the tested structural member, provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the Restrained Beam Rating of the structural member being replaced. Additionally, for steel joists and steel trusses the Restrained Beam Rating of the joist or truss being transferred should be equal to or greater than the Restrained Assembly Rating of the floor-ceiling assembly into which the joist or truss is being transferred.

When it is the intent to comply with requirements that the structural member’s hourly rating be equal to or greater than the assembly’s hourly rating, the structural member from the N Series design may be substituted for the tested structural member, provided also that the hourly Beam Rating of the structural member being transferred is at least equal to the hourly rating of the requirement. Additionally, the Restrained Beam Rating of the structural member being transferred should be equal to or greater than the Restrained Assembly Rating of the floor assembly into which the structural member is being transferred.

For applications where the assembly’s hourly rating differs from the structural member rating, particular attention should be made to the thickness of fire-protection materials applied to the underside of the floor adjacent to the structural member. The thickness of the fire-protection material required within 12 in. beyond the edges of the structural member should be the lesser of the beam protection thickness or the beam thickness as required by the N Series design but not less than the thickness of the fire-protection material required by the assembly.

Application of S Series Designs

When it is the intent to only maintain the existing Assembly Rating, the beams, steel joists and steel trusses from the S Series designs may be substituted for the tested structural member, provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the Unrestrained Beam Rating of the structural member being replaced. Additionally, the Restrained Beam Rating of the structural member being
transferred should be equal to or greater than the Restrained Assembly Rating of the roof assembly into which the structural member is being transferred.

When it is the intent to comply with requirements that the structural member’s hourly rating be equal to or greater than the assembly’s hourly rating, the structural member from the S Series design may be substituted for the tested beam, provided that: (1) the Unrestrained Beam Rating of the beam being transferred is equal to or greater than the Unrestrained Beam Rating of the beam being replaced; and (2) the Restrained Assembly Rating of the assembly from which the beam is being transferred is equal to or greater than the Restrained Assembly Rating of the assembly into which the beam is being transferred.

When it is the intent to comply with requirements that the beam’s hourly rating be equal to or greater than the assembly’s hourly rating, the beams from the A, D, G, J, and P Series designs may be substituted for the tested beam, provided also that the hourly Unrestrained Rating of the beam being transferred is at least equal to the hourly rating of the requirement.

Mastic and Intumescent Coatings
Application of N Series and S Series Designs
The beams, steel joists and steel trusses from N Series designs may be substituted for the tested structural member, provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the hourly Unrestrained Beam Rating of the structural member being replaced, and the Restrained Beam Rating of the structural member being transferred is equal to or greater than the Restrained Assembly Rating of the floor-ceiling assembly into which the structural member is being transferred.

5. Unprotected Floors and Roofs
The Unrestrained Beam Ratings in the N400, N600, N700 and N800 Series designs with spray-applied fire-protection material on the steel roof decks may be used with unprotected steel roof deck assembly designs (D900 Series) or unprotected precast concrete floors, provided that the beam fire-protection material is oversprayed to the underside of the floor on both sides of the beam for a minimum width of 12 in. beyond the edges of the beam flange. The thickness of the fire-protection material oversprayed to the underside of the floor should be the same as required for the beam. Overspraying is not required when the N Series designs with unprotected steel roof decks are substituted in the D900 Series designs or to support unprotected precast concrete units.

The Unrestrained Beam Ratings in the S400, S600, S700 and S800 Series designs with spray-applied fire-protection material on the steel roof decks may be used with unprotected steel roof deck assembly designs (P960 Series), provided the beam protection material is oversprayed to the underside of the roof on both sides of the beam for a minimum distance of 12 in. beyond the edges of the beam flange. The thickness of fire-protection material oversprayed to the underside of the roof should be the same as required for the beam. Overspraying is not required when the S Series designs with unprotected steel roof decks are substituted in the P960 Series designs.

6. Adjustment of Thickness of Spray-applied Fire-resistive Materials for Restrained and Unrestrained Beams
Alternate-rated steel beams may be substituted for the given beam in the A700, A800, A900, D700, D800, D900, G700, G800, J700, J800, P900, P700, P800, P900, S700, S800, P800, P900, S700, S800 Series designs, provided the beams are of the same shape, and the thickness of spray-applied fire-resistive material for 1, 1-1/2, 2, 3 and 4 h Restrained and Unrestrained Beam ratings is adjusted in accordance with the following equation:

\[
T = \frac{W_1}{D_1} + \frac{0.6}{D_2} + 0.6
\]

Where:
- \( T \) = Thickness (in.) of spray-applied material
- \( W \) = Weight of beam (lb./ft)
- \( D \) = Perimeter of protection, at the interface of the fire-protection material and the steel through which heat is transferred to steel (in.)

Subscript 1 = Refers to alternate beam size and required material thickness

Subscript 2 = Refers to given beam size and material thickness shown in the individual designs

1) \( W/D \) values are not less than 0.37

2) \( T \) values are not less than 3/8 in. and

3) the Unrestrained and Restrained Beam Rating is not less than 1 h.

The use of this procedure is applicable to the adjustment of spray-applied fire-resistive material thickness on restrained and unrestrained beams having solid web members. It is not applicable to the adjustment of mastic and intumescent coatings on restrained and unrestrained beams.

When used to adjust the material thickness for a restrained beam, the use of this procedure is limited to steel sections classified as compact in accordance with the “Specification for the Design of Structural Steel Buildings,” by the American Institute of Steel Construction, Load and Resistance Factor Design (Third Ed.).

7. Restrained and Unrestrained Conditions
Certifications of floor-ceiling and roof-ceiling assemblies and individual beams include restrained and unrestrained ratings. See Section III FLOOR-CEILINGS AND ROOF-CEILINGS, Item 16 Restrained and Unrestrained Assemblies for additional information on this subject.

V. COLUMNS
The minimum column size and configuration of the steel member is specified in the X and Y Series designs. The same hourly rating applies when a steel section with an equal or greater W/D ratio is substituted for the specified column size of the same configuration.

W/D values are published by the American Institute of Steel Construction for contour and box-protection configurations. In 2001, the method used to calculate the contour perimeter was refined to include the rounded fillets of hot-rolled sections rather than assuming right-angle web-flange intersections. An example of this change results in the W/D value for a W10x99 section (with four side contour protection) changing from 0.83 to 0.84.

Application of equations in the Fire-resistance Directory that include a proportional relationship of the (W/D) value is not affected by the change in the calculation process for (W/D), provided the (W/D) values used in each application are determined consistently by a single method.

Unrestrained thickness of the fire-protection materials in the X700, X800 and Y700 Series designs required on wide flange steel sections smaller than specified in a design may be calculated as follows:

\[
X_2 = 1.25 \left( \frac{W_1}{D_1} \right) \left( \frac{D_2}{W_2} \right)
\]

Where:
- \( X_2 \) = Thickness of coating for smaller wide flange section
- \( W_1 \) = Thickness of coating used on the rated steel section
- \( W_2 \) = Weight per foot of smaller wide flange section
- \( W_1 \) = Weight per foot of the rated steel section
- \( D_2 \) = Perimeter of smaller steel section at interface with coating
- \( D_1 \) = Perimeter of the rated steel section at interface with coating

Guidance addressing the application of spray-applied fire-resistive materials to primed or similarly painted wide flange steel shapes is provided in the section titled Coating Materials.

The fire-resistive materials applied to the steel sections should be protected from damage.

VI. WALLS AND PARTITIONS
The ratings for walls and partitions apply when either face of the assembly is exposed to the fire unless indicated otherwise in a specific design. Flashing and corner details may vary from those described in a design provided structural equivalency is maintained and similar materials to those specified in the design are used for supports and flashings. Where dynamic movement is specified in Joint Systems (XHBN) that utilizes either U400, V400 or W400 Series fire-resistance-rated wall and partition assemblies, the special features of the walls to accommodate dynamic movement are intended to be as specified in the individual designs under XHBN.

As stated in ANSI/UL 263, the test specimen is to be representative of the construction for which classification is desired as to materials, workmanship, and details such as dimensions of parts, and is to be built under conditions representative of those practically applied in building construction and operation. Accordingly, wall and partition hourly ratings are applicable when walls are constructed in a true vertical position. Unless otherwise noted in an individual design, the performance of angled walls or walls constructed in the horizontal position has not been investigated.

The hourly rating of a load-bearing assembly also applies to the same assembly when it is used as a non-load-bearing assembly.

The size of studs is minimum unless otherwise stated in the individual designs.

The spacing of studs is a maximum unless otherwise stated in the individual designs.
Spacing between parallel rows of studs are minimums unless otherwise stated in the individual designs.

Gypsum board thicknesses specified in specific designs are minimums. Greater thicknesses of gypsum board are permitted as long as the fastener length is increased to provide penetration into framing that is equal to or greater than that achieved with the specified gypsum board thickness and fasteners.

Additional layers of gypsum board are permitted to be added to any design.

Orientation, vertical or horizontal, of the application of gypsum board in walls and partitions is specified in the individual designs.

Exceptions when gypsum board is applied horizontally in the individual wall or roof-ceiling assembly are minimum, horizontal butt joints of vertically applied gypsum board should be backed by the same type studs as specified in the design. Alternatively, minimum 25 gauge steel framing with a minimum attachment face of 1-1/4 in. may be used for the backing. Both edges of the gypsum board forming the horizontal joint should be attached to the backing with the same screws and spacing as specified in the design for the attachment of the gypsum board edges, then finished as specified for the vertical joints.

Horizontal butt joints on opposite sides of the studs in single-layer applications should be staggered a minimum of 12 in. unless otherwise stated in the individual designs. Horizontal butt joints in adjacent layers on the same face of the assembly in multiple-layer applications should be staggered a minimum of 12 in, unless otherwise stated in the individual designs.

1. Wood Stud Walls

Walls of combustible construction should be fireblocked between floors, between the top story and the roof or attic, and at certain intervals laterally in accordance with the provisions of the applicable code to prevent the free passage of flames and hot gases.

The hourly fire rating of load-bearing wood stud walls tested before January 1, 2009, were derived with a superimposed load applied to the wall assembly intended to theoretically develop maximum working stresses not exceeding the design values published in the Supplement to the 1991 Edition of the “National Design Specification” for wood when horizontally braced at mid-height. When horizontal bracing is referenced in the design it is mandatory, unless otherwise stated.

For fire-resistive designs based upon data generated after December 31, 2008, the superimposed load applied to the wall assembly is determined from ASTM D6515, “Standard Practice for Calculating the Superimposed Load on Wood-frame Walls for Standard Fire-Resistance Tests,” and includes a reference to the edition of the “National Design Specification” used to calculate the design load, the limiting design factor, and the percentage of the design load applied to the test sample.

Wood stud walls may contain fire-retardant-treated studs as well as untreated wood studs. The use of fire-retardant-treated plywood (wood structural panels) may be used in designs that contain use of untreated plywood when all other specified attributes are equivalent to the wood structural panel in the design.

2. Steel Studs

The dimensions and gauge of steel studs are minimums. The hourly ratings apply when the studs are of a heavier gauge and/or larger dimensions than specified in a design. The superimposed load of bearing walls utilizing steel studs should be based on the capacity of the studs as determined by the “North American Specification and Commentary for the Design of Cold-Formed Steel Structural Members.”

When lateral support of studs (by means of straps, channels or similar steel members) is required in the design, the loads applied to steel studs should be based on the steel-braced design. The loads based on sheathing bracing should not be assigned to the unstiffened stud in the design.

The loads applied to steel studs having a yield stress higher than the stated minimum should be based upon the specified minimum yield stress stated in the design.

Non-load-bearing steel studs are produced in accordance with ASTM C645, “Standard Specification for Nonstructural Steel Framing Members.” In accordance with ASTM C645, the minimum flange width should be 1-1/4 in. and the minimum return lip should be 3/16 in. Studs are also produced with steel having a minimum yield strength of 33 ksi.

3. Metal Thickness

Unless otherwise indicated in the individual designs, the following minimum metal thicknesses apply where a metal gauge designation is stated. Metal gauges are no longer referenced in ASTM Standards. It is still an industry practice to specify steel components by gauge. Any of the designs contained herein refer to metal gauge, the following information should be used as a guide where field questions occur. The tables shown herein should be used as a reference and the Authority Having Jurisdiction should be consulted if discrepancies exist between these tables and the local code requirement. Due to structural considerations and fire-performance considerations, the minimum thickness tables are different for steel deck (floor or roof), load-bearing studs and non-load-bearing studs.

The minimum thickness for load-bearing steel studs is based upon ASTM C955 (1996), “Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks) and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases.” The color code denoted by the ASTM Standard is also shown below. For non-load-bearing studs, the minimum bare-metal thickness should therefore be as follows:

<table>
<thead>
<tr>
<th>Gauge</th>

4. Gypsum Board Joint Treatment

The joints in gypsum board applied to wood or steel studs may either be exposed or covered with joint tape and joint compound for that portion of the joint above a suspended ceiling which is a part of a fire-resistive floor-ceiling or roof-ceiling assembly.

5. Nonmetallic Electrical Outlet Boxes

Outlet Boxes and Fittings Certified for Fire Resistance (CEYY) includes certifications for nonmetallic outlet and switch boxes for use in wall or partition assemblies. The information provided for each certification includes the model numbers for the certified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes may not be installed on opposite sides of walls or partitions of staggered stud construction unless certified for use in such constructions.

6. Metallic Electrical Outlet Boxes

Metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing wood stud and steel stud walls with ratings not exceeding 2 h. These walls should have gypsum wallboard facings similar to those shown in Design Nos. U301, U421 and U425. The metallic outlet or switch boxes should be securely fastened to the studs and the opening in the wallboard facing should be cut so that the clearance between the box and the wallboard does not exceed 1/8 in. The surface area of individual metallic outlet or switch boxes should not exceed 16 sq in. The aggregate surface area of the boxes should not exceed 100 sq in. per 100 sq ft of wall surface. The aggregate surface area of the boxes may be exceeded when Wall-opening Protective Materials (CLIV) are installed according to the requirements of their certification.

Metallic boxes located on opposite sides of walls or partitions should be separated by a minimum horizontal distance of 24 in. This minimum separation distance between metallic boxes may be reduced when Wall-opening Protective Materials (CLIV) are installed according to the requirements of their certification.

Metallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless certified for use in such constructions.

7. Exterior Walls

The fire-resistive designs and UL-certified materials for walls and partitions are investigated to ANSI/UL 263, which addresses fire-resistive requirements only with the understanding that their use is intended for interior applications. Where an exterior application of a UL-certified wall or partition design is desired, the local building code and Authority Having Jurisdiction should be consulted to ensure compliance with other code requirements applicable to exterior walls.

8. Concrete Masonry Units

Unless otherwise indicated in the individual designs, the allowable compressive stress for the concrete masonry units have been determined from the empirical design method for masonry found in the model codes. For assemblies that have been tested at less than 100% of the allowable compressive stress, the design states the maximum allowable compressive stress for the assembly.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH) UL in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
CEILING DAMPERS (CABS)

USE AND INSTALLATION

This category covers ceiling dampers investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

Ceiling dampers are designed to function as a heat barrier in air-handling openings penetrating the ceiling membrane of fire-resistive floor-ceiling designs and/or roof-ceiling designs for which they have been investigated.

The certifications for ceiling dampers are published in two different methods:

1. Some ceiling dampers are intended for use in lieu of hinged-door-type dampers in floor-ceiling and/or roof-ceiling designs that contain air ducts and specify the use of a hinged-door-type damper over each duct outlet. Under this method of certification, a certified ceiling damper may be substituted for the hinged-door-type damper specified in the design in accordance with the provisions of the certification of the ceiling damper. An air duct with a hinged-door-type damper must be a specified component of the floor-ceiling and/or roof-ceiling design for this certification method to apply. For ceiling dampers of this type, the individual certifications specify (1) the model number of the damper, (2) the type of assembly (floor-ceiling and/or roof-ceiling) in which the damper may be used, (3) the hourly rating of the assembly in which the damper may be used, and (4) the conditions under which the ceiling damper may be substituted for the hinged-door-type damper (e.g., one ceiling damper for each 113 sq in. or larger duct outlet protected with a hinged-door-type damper).

2. Some ceiling dampers are intended for use in specific floor-ceiling and/or roof-ceiling designs as specified in the designs and marked on the damper. Under this method of certification, the certified ceiling damper must be directly referenced in the floor-ceiling and/or roof-ceiling design, by manufacturer and model number, in order to be utilized in that design. Only the dampers specified in the design may be utilized. For ceiling dampers intended for use in specific designs, the individual certifications specify (1) the model number of the damper, (2) the size of the ceiling damper, and (3) the specific design(s) in which the damper may be utilized. Where the design indicates the damper is optional, the intent is the inclusion of the duct outlet is optional. If a duct outlet is provided, it must be protected with the specified ceiling damper.

Ceiling dampers are intended to be installed in accordance with the provided installation instructions. For ceiling dampers intended for installation in a duct outlet in lieu of hinged-door-type dampers, the location of the ceiling damper in the duct outlet relative to the ceiling level is specified in the installation instructions. This location must be followed during installation in order to obtain the hourly fire-rated performance of the design.

PRODUCT MARKINGS

A separate label located adjacent to the Certification Mark identifies whether the ceiling damper has been investigated for use in static or dynamic systems. The label for ceiling dampers for use in dynamic systems also includes the maximum air flow rate for which the damper has been investigated. A ceiling damper labeled for use in dynamic systems is also suitable for use in static systems.

PRODUCT IDENTITY

The following product identity appears on the product:

Ceiling Damper

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the physical performance of ceiling dampers in this category is ANSI/UL 555C, “Ceiling Dampers.”

The basic standard used to investigate the fire-resistance performance of ceiling dampers in this category for use in floor-ceiling and/or roof-ceiling designs in lieu of the hinged-door-type dampers shown in those designs is ANSI/UL 263, “Fire Tests of Building Construction and Materials.”

The basic standard used to investigate the fire-resistance performance of ceiling dampers in this category for use in floor-ceiling and/or roof-ceiling designs that do not indicate the use of hinged-door-type dampers in the design is ANSI/UL 263, “Fire Tests of Building Construction and Materials.”

Fire performance measured by ANSI/UL 263 is based upon the assumption that air movement will be effectively stopped at the start of a fire.

Ceiling dampers intended for use in HVAC systems where the airflow is operational at the time of a fire, such as in a smoke-control system, or from other situations in which the fan system is operational at the time of a fire, are investigated for dynamic closure. Ceiling dampers intended for use where the air movement is effectively stopped at the start of a fire are not required to be investigated for dynamic closure.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO FIRE RESISTANCE DESIGN NO(S). SEE UL ONLINE CERTIFICATIONS DIRECTORY

AS TO FIRE RESISTANCE SEE UL ONLINE CERTIFICATIONS DIRECTORY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LUMINAIRES, LUMINAIRE ASSEMBLIES AND LUMINAIRE ENCLOSURES CERTIFIED FOR FIRE RESISTANCE (CDHW)

USE

This category covers luminaires, luminaire assemblies and luminaire enclosures investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The luminaires, assemblies and enclosures (in conjunction with a luminaire) are intended for recessed installations in ceilings in accordance with ANSI/NFPA 70, “National Electrical Code.” They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

The luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Luminaire

Luminaire Assembly

Luminaire Enclosure

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET BOXES AND FITTINGS CERTIFIED FOR FIRE RESISTANCE**

**CEYY**

GENERAL

This category covers outlet boxes and fittings investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BUXV). These are special-purpose boxes intended for installation in floors, and nonmetallic outlet boxes intended for installation in floors, walls and partitions, and/or ceilings. They are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). They have shown a degree of fire resistance when installed in the particular floor(s), wall(s) and/or ceiling(s) described for each certified company.

This category includes certifications for both metallic and nonmetallic outlet and switch boxes for use in fire-resistance-rated wall or partition assemblies. The information provided for each certification includes the model numbers for the certified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless certified for use in such constructions.

Nonmetallic outlet boxes described for installation in fire-resistance assemblies consisting of wood joists and gypsum-board ceilings are also suitable for use in assemblies consisting of pre-engineered wood joists or trusses and gypsum-board ceilings.

 Authorities Having Jurisdiction should be consulted before installation.

**FLOOR BOXES**

Boxes intended for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and certification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both, and are provided with a marking on the carton to identify boxes of this type, such as "Floor Box" or "Floor Box, Concrete Tight," as appropriate.

**WALL AND PARTITION BOXES**

Nonmetallic outlet boxes investigated for installation in fire-resistive assemblies are provided with the appropriate Certification Mark for electrical products and other markings as described in Nonmetallic Outlet Boxes.
Speaker assemblies are intended to be installed in accordance with the installation instructions supplied with the product and as described in the individual fire-resistive designs.

**PRODUCT IDENTIFICATION**

The following product identity appears on the product:

**Speaker Assembly**

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

**RELATED PRODUCTS**

For additional information, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

**ADDITIONAL INFORMATION**

The basic standard used to investigate products in this category is ANSI/UL 263, “Fire Tests of Building Construction and Materials.”

Some of these speaker assemblies are provided with an outer enclosure. The insulation material that surrounds the enclosure that is exposed to the airflow in a return air-plenum space has additionally been investigated to ANSI/UL 723, “Test for Surface Burning Characteristics of Building Materials.” These materials have a flame spread value of 25 or less and a smoke developed value of 50 or less.

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**BUSWAYS, METAL ENCLOSED, OVER 600 VOLTS (CVZW)**

**GENERAL**
This category covers metal-enclosed busways of the nonsegregated phase type, for use in accordance with Article 368 of ANSI/NFPA 70, "National Electrical Code." Nonsegregated phase busway is one in which all phase conductors are in a common metal enclosure without barriers between the phases. These are assemblies of metal-enclosed conductors, together with associated interconnections, enclosures, and supporting structures. These assemblies are intended for use on systems with nominal rated voltages from 601 V to 38 kV ac. Current ratings are from 600 to 10,200 A. These assemblies may be intended for either indoor or outdoor applications. An assembly that has been investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." Enclosures are of the ventilated or nonventilated type. A ventilated enclosure is provided with means to permit circulation of sufficient air to remove excess heat. A nonventilated enclosure is constructed to provide no intentional circulation of external air through the enclosure.

**PRODUCT MARKINGS**
The following product identity appears on the product:

**Metal-enclosed Busway**

**ADDITIONAL INFORMATION**
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**
The basic standard used to investigate products in this category is ANSI/IEEE C37.23 (2003), "IEEE Standard for Metal-Enclosed Bus."

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-Enclosed Busway.”

---

**BUSWAYS AND ASSOCIATED FITTINGS (CWFT)**

**GENERAL**
This category covers busways and associated fittings, rated 600 V or less, 6000 A or less. Busways are grounded metal enclosures containing factory-mounted bare or insulated conductors, which are usually copper or aluminum bars, rods or tubes. These enclosures and, in some cases an additional ground bus, are intended for use as equipment grounding conductors. Some busways are not intended for use ahead of service equipment and are marked with the maximum rating of overcurrent protection to be used on the supply side of the busway. Busways may be one of the following designs:

**Lighting Busway** — Busway intended to supply and support industrial and commercial luminaires. Lighting busway is limited to a maximum current rating of 50 A.

**BUSWAYS AND ASSOCIATED FITTINGS (CWFT)**

**Trolley Busway** — Busway having provision for continuous contact with a trolley by means of a slot in the enclosure. Trolley busway may be additionally marked “Lighting Busway” if intended to supply and support industrial and commercial luminaires.

**Continuous Plug-in Busway** — Busway provided with provision for the insertion of plug-in devices at any point along the length of the busway. Continuous plug-in busway is intended for general use and may be installed within reach of persons. Busways of this design are limited to a maximum current rating of 225 A.

**Short-run Busway** — Unvented busway intended for a maximum run of 30 ft horizontally, 10 ft vertically and are primarily used to supply switchboards. Except for transformer stubs, short-run busway is not intended to have intermediate taps.

**USE AND INSTALLATION**
Busways are intended for installation in accordance with Article 368 of ANSI/NFPA 70, "National Electrical Code" (NEC), and the manufacturer's installation instructions.

Busways investigated to determine their suitability for:
- installation in a specified position,
- for use in a vertical run, or for support at intervals greater than 5 ft,
- for outdoor use
are so marked. This marking is on or contiguous with the name incorporating the manufacturer's name and electrical rating.

A busway or fitting containing a vapor seal is so marked, but unless marked otherwise, the busway or fitting has not been investigated for passage through a fire-rated wall.

Busway marked “Lighting Busway” and protected by overcurrent devices rated in excess of 20 A is intended for use only with luminaires employing heavy-duty lampholders unless additional overcurrent protection is provided for the luminaire in accordance with the NEC.

Trolley busway should be installed out of the reach of persons or be otherwise installed to prevent accidental contact with exposed conductors.

Some busways have a number of short stubs and are marked for use with certain compatible equipment.

Busways and fittings covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on the terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of the NEC. Termination provisions are determined based on values provided in Table 310.15(B)(16) or Section 310.15(B)(7) with no adjustment made for correction factors.

Some fittings are suitable for use as service equipment and are so marked.

**PLUG-IN BUSWAY FITTINGS INTENDED FOR USE ON OTHER MANUFACTURERS’ BUSWAYS**
Busway fittings of the plug-in design may be suitable for use on other manufacturers’ continuous plug-in or lighting busways. Busway fittings investigated for use on other manufacturers’ busways are limited to fittings incorporating luminaires. Fittings are marked to indicate with which busways they are intended to be used. Fittings intended for this application are limited to short-circuit current ratings of 10 kA, 600 V or less.

**RATINGS**
Busways and associated fittings marked “Short Circuit Current Rating(s) Maximum RMS Symmetrical Amps ____ Volts ____” have been investigated for the rating indicated.

**PRODUCT IDENTITY**
One of the following product identities appears on the product:

**Busway**

**Busway Plug**

**Short-run Busway**

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**
The basic standard used to investigate products in this category is UL 857, "Busways."

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busway.”

---

**LOOK FOR THE UL MARK ON PRODUCT**
"LISTED," a control number, and the product name “Busway,” “Short-Run Busway” or “Busway Plug,” or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUSWAYS AND ASSOCIATED FITTINGS CERTIFIED TO IEC PUBLICATIONS (CWTN)

This category covers busbar trunking systems (otherwise known as busways and associated fittings) with voltage ratings not exceeding 1000 V ac or 1500 V dc. Busway trunking systems are intended for use in connection with the generation, transmission, distribution and conversion of electric energy, and for the control of electric-energy-consuming equipment. These products are intended for distribution and use in areas of the world where IEC Standards are in effect.

These products may also be provided with the Certification Mark for Busways and Associated Fittings (CWT).

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Busway
- Busway Plug
- Short-run Busway
- Other product identities may be used as shown in the individual certifications.

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- IEC [standard(s)]
- “ALSO CERTIFIED TO IEC [standard(s)]”
- Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CLASSIFIED,” and a file number. The designation of the appropriate publications are filled in the blank.

For those products which are not also Listed, the Classification Mark consists of the statement: “CLASSIFIED BY UNDERWRITERS LABORATORIES INC. IN ACCORDANCE WITH IEC [standard(s)].” The designation of the appropriate publications are filled in the blank.

For those products which are not also Listed, the Classification Mark may include the UL symbol and the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

CABINETS AND CUTOUT BOXES (CYIV)

GENERAL

This category covers sheet-metal boxes and nonmetallic boxes. Cutout boxes are provided with a door secured by hinges and one or more fasteners and are intended for surface mounting. A cabinet consists of two parts: a cabinet box and a mating cabinet front that contains a door. A cabinet may be flush mounted or surface mounted. These boxes are intended for installation in accordance with Article 312 of ANSI/NFPA 70, “National Electrical Code.”

ENVIRONMENTAL RATINGS AND CONDITIONS

Each cabinet and cutout box is marked with one or more of the following: Type 1, 2, 3, 3X, 3R, 3X, 35X, 4, 4X, 5, 6, 6P, 12, 12K or 13. The intended uses for each Type are as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Cabinets and cutout boxes marked as Type 2, 3R or 3RX enclosures may be marked to indicate the intended mounting orientation, or the location where electrical parts are intended to be installed, or both, where necessary to maintain the designated environmental rating.

Cabinets and cutout boxes marked as Type 3, 3X, 35X, 4, 4X, 5, 6, 6P, 12, 12K or 13 have integral mounting means external to the enclosure cavity or may have openings into the enclosure cavity for attachment of separate mounting means supplied with the enclosure or available as a kit referenced from enclosure markings.

ELECTRICAL EQUIPMENT

Some cabinets and cutout boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the box.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cutout Box (for the surface-mounted box provided with a door)
- Electric Cabinet Box (for the box only)
- Electric Cabinet Front (for the front trim or matt used on the flush- or surface-mounted cabinet box)

RELATED PRODUCTS

Boxes provided with a cover secured by fasteners other than hinges are covered under Boxes, Junction and Pull (BGUZ).

Enclosures investigated for ingress protection in accordance with IEC 60529, “Degrees of Protection Provided by Enclosures (IP Code),” are covered under Degrees of Protection by Enclosures Classified in Accordance with IEC Publications (EFO).

Enclosures intended for use with industrial control panels are covered under Industrial Control Panels (NITW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 50, “Enclosures for Electrical Equipment, Non-Environmental Considerations,” and ANSI/UL 50E, “Enclosures for Electrical Equipment, Environmental Considerations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

For additional information, see Environmental Considerations.
CABLE ASSEMBLIES AND FITTINGS FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION (CYJV)

USE
This category covers cable assemblies, male and female cable fittings, panel-mounted fittings and fittings used with industrial control equipment in accordance with Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC). These assemblies are intended to be used in an industrial environment to distribute the control signals to remote proximity switches or other control circuit devices. The cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. These devices are intended for use only with the Listed’s same line of products covered under this category.

Cable assemblies and fittings are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container. The products covered under this category are not intended for interruption of current and are so marked.

Cable Assemblies — Cable assemblies consist of a length of flexible cord with a molded-on or assembled-on male or female connector on at least one end of the cable. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Male and Female Cable Fittings — Fittings intended to be field-wired onto flexible cord may have a male or female insert configuration. The diameter and the wire size of the flexible cord to which the fitting is intended to be assembled is indicated on the fitting or the smallest unit shipping container.

Panel-mounted Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to a panel. These fittings may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

Tap Fittings — Tap fittings consist of field-wiring terminals for feed-through connection to power-limited tray cable or other appropriate cable together with either a female connector to connect to a cable assembly or field wiring terminals to connect to flexible cord suitable for hard usage that is the same size and ampacity as the cable. Tap fittings are intended for use within outlet boxes supported by cable trays in Class 1 power-limited circuits to provide a point of connection to the fixed wiring of the building structure. They may also be installed on Type PLTC cable on open wiring in Class 2 circuits in accordance with Section 725.61(D)(4) of the NEC. They have been investigated for electrical insulation, mechanical strength, temperature rise, fault current withstand and neatness of grounding path to demonstrate equivalency to the wiring system on which they are intended to be installed.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Cable Assembly Fitting for Industrial Control and Signal Distribution
- Cable Assembly for Industrial Control and Signal Distribution
- CA Fitting for Ind. Cont.
- Cable Assy for Ind. Cont.
- CYJV Cable Assembly
- CYJV Cable Assembly Fitting
- CYJV Cable Assy
- CYJV Cable Assy Fitting

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 2238, "Cable Assemblies and Fittings for Industrial Control and Signal Distribution.

UL MARK
The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Cable assemblies that have terminations on one end only may be bulk labeled with the Certification Mark provided on the smallest unit shipping container. All other Certification Marks are applied to each individual device.

Alternate UL Mark
The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Cable Assembly for Industrial Control and Signal Distribution” or “Cable Assy for Ind. Control.”

CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN HAZARDOUS LOCATIONS (CYJX)

USE
This category covers cable assemblies, cable plugs and sockets, panel-mounted plugs and sockets, and plugs and sockets used for interconnection between one piece of control equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery." These assemblies are intended to be used in locations that are classified as Class I, Division 2 to distribute the control signals to remote proximity switches or other control-circuit devices.

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket so as to protect against unintentional separation. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, “WARNING: – Do Not Connect or Disconnect When Energized,” or equivalent.

Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends.

Product Types
The following products are covered under this category:

Cable Assemblies — Cable assemblies consist of a length of cord or cable as follows:
- 1. extra-hard-use cord,
- 2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
- 3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

See the following Code references for additional details on these wiring methods:
- For extra-hard-use cord, see Article 400 of the NEC.
- For instrumentation tray cable (Type ITC), see Article 727 of the NEC.
- For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Cable Plugs and Sockets — These plugs and sockets consist of a field-wired or molded onto cord or cable as indicated under Cable Assemblies above may have a male or female insert configuration. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket or the smallest unit shipping container.

Panel-mounted Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is pro-
provided with a means to secure to a panel. These plugs and sockets may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

RATINGS
These cable assemblies are rated based on the involved cord or cable as follows:
1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Cable assemblies and plugs and sockets are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container.

SPECIAL CONSIDERATIONS
The cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 501.10 of the NEC.

These cable assemblies and mating plugs and sockets are intended for use only with the Listed’s same line of cable assemblies and mating plugs and sockets covered under this category.

The products covered under this category are not intended for interruption of current and are so marked.

These devices are intended for indoor use only, unless otherwise so identified.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Cable Assembly for Industrial Control and Signal Distribution for Use in Hazardous Locations
- Cable Assembly Plug for Industrial Control and Signal Distribution for Use in Hazardous Locations
- Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations
- CYJX Cable Assembly for Use in Hazardous Locations
- CYJX Cable Assembly Plug for Use in Hazardous Locations
- CYJX Cable Assembly Socket for Use in Hazardous Locations

The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS
The basic unclassified locations standard used to investigate products in this category is ANSI/UL 2238, “Cable Assemblies and Fittings for Industrial Control and Signal Distribution.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

Note: The unclassified locations use of the term “fitting” in ANSI/UL 2238 is equivalent to the hazardous (classified) locations use of the terms “plug” or “socket.”

UL MARK
The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK
The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cable Assembly for Industrial Control and Signal Distribution for Use in Hazardous Locations,” “Cable Assembly Plug for Industrial Control and Signal Distribution for Use in Hazardous Locations,” “Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations,” “CYJX Cable Assembly Plug for Use in Hazardous Locations,” “CYJX Cable Assembly Socket for Use in Hazardous Locations,” “CYJX Cable Assembly for Use in Hazardous Locations,” “CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYJX),” “CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYJX),” the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket or the smallest unit shipping container.

Cable Assemblies — Cable assemblies consist of a length of cord or cable as follows:
1. extra-hard-usage cord,
2. instrumentation cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: For extra-hard-usage cord, see Article 300 of the NEC. For instrumentation cable (Type ITC), see Article 725 of the NEC. For power-limited tray cable (Type PLTC), see Article 400 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Cable Plugs and Sockets — Plugs and sockets intended to be field wired or molded onto cord or cable as indicated under Cable Assemblies above have a molded-on configuration. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket or the smallest unit shipping container.

Panel-mounted Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to a panel. These plugs and sockets may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

RATINGS
These cable assemblies are rated based on the involved cord or cable as follows:
CABLE SEALING FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYMJ)

USE

This category covers combination termination and sealing fittings for threaded connection of cable to equipment in Zone classified hazardous locations as indicated in the individual certifications. Termination and sealing fittings that employ a sealing compound are intended for use only with sealing compound as specified by the manufacturer in instructions furnished with the fitting. These devices are intended for use in sealing the conductors and outer jackets of certified cable of the type indicated in the individual certifications. No splices of conductors are permitted to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer's instructions.

PRODUCT IDENTIFICATION

The following product identity appears on the product:
Type + Cable Sealing Fitting for Use in Hazardous Locations
+ Generic cable designation, such as MC-HL, ITC-HL, etc.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

PRODUCT IDENTIFICATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

OTHER PRODUCT IDENTITIES

Other product identities may be used as shown in the individual certifications.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product, and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations.” The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYJZ)

1. extra-hard-wearing cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Cable assemblies and plugs and sockets are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container.

SPECIAL CONSIDERATIONS

The cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 505.15 of the NEC. These cable assemblies and mating plugs and sockets are intended for use only with the Listed’s same line of cable assemblies and mating plugs and sockets covered under this category. The products covered under this category are not intended for interruption of current and are so marked.

These devices are intended for indoor use only, unless otherwise so identified.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Cable Assembly for Industrial Control and Signal Distribution for Use in Hazardous Locations
Cable Assembly Plug for Industrial Control and Signal Distribution for Use in Hazardous Locations
Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations

The devices are intended for use in sealing the conductors and outer jackets of certified cable of the type indicated in the individual certifications. No splices of conductors are permitted to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer's instructions.

ANSI/NFPA 70, “National Electrical Code,” does not permit the use of elastomeric seals in flameproof cable fittings.

PRODUCT IDENTITY

The following product identity appears on the product:
Type + Cable Sealing Fitting for Use in Hazardous Locations
+ Generic cable designation, such as MC-HL, ITC-HL, etc.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

PRODUCT IDENTIFICATION

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 2225, “Cables and Cable Fittings for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product, and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Type + Cable Sealing Fitting for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

+ Generic cable designation, such as MC-HL, ITC-HL, etc.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS (CYMJ)

USE

This category covers combination termination and sealing fittings for threaded connection of cable to equipment in Zone classified hazardous locations as indicated in the individual certifications. Termination and sealing fittings that employ a sealing compound are intended for use only with sealing compound as specified by the manufacturer in instructions furnished with the fitting. These devices are intended for use in sealing the conductors and outer jackets of certified cable of the type indicated in the individual certifications. No splices of conductors are permitted to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer’s instructions.

PRODUCT IDENTIFICATION

The following product identity appears on the product:
Type + Cable Sealing Fitting for Use in Hazardous Locations
+ Generic cable designation, such as MC, MC-HL, TC, TC-HL, etc.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 2225, “Cables and Cable Fittings for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Type - Cable Sealing Fitting for Use in Hazardous Locations” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE TRAY INSTALLATION GUIDELINES

Cable trays are intended for assembly in the field and for use in accordance with Article 392 of ANSI/NFPA 70, “National Electrical Code.” They have been certified as to their suitability for use in accordance with Article 392 of ANSI/NFPA 70, “National Electrical Code.”

Cable trays are intended for use as equipment grounding conductors in accordance with Sections 392.60(A) and 392.60(B) of the NEC. The cable trays are marked on the outer surface of the sidewall of the tray indicating the cross-sectional area of the grounding metal.

INSTALLATION

Cable-tray assemblies have been investigated for bonding between sections using the minimum hardware provided by the manufacturer. The manufacturer may supply cable-tray sections and fittings without a positive mechanical means for completing the grounding connection. Assemblies not provided with positive mechanical grounding connections are intended to be bonded with mechanical connectors or bonding jumpers provided by the installer, in accordance with 392.60(B)(4) of the NEC.

PRODUCT IDENTITY

The following product identity appears on the product: Cable Tray

RELATED PRODUCTS
For nonmetallic-cable trays, see Cable Trays, Nonmetallic (CYOV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR SUITABILITY AS AN EQUIPMENT GROUNDING CONDUCTOR ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CABLE TRAY AS TO ITS SUITABILITY AS AN EQUIPMENT GROUNDING CONDUCTOR ONLY

Control No.

CABLE TRAYS, NONMETALLIC (CYOV)

USE

This category covers nonmetallic, including fiberglass (fiberglass-reinforced plastic) cable tray systems installed for the support of power and/or control cable. Nonmetallic cable trays are intended for assembly in the field and for use in accordance with Article 392 of ANSI/NFPA 70, “National Electrical Code.”

Nonmetallic cable trays are intended to be installed in accordance with NEMA VE 2, “Cable Tray Installation Guidelines,” or as recommended by the manufacturer. Cable trays are marked with load/span ratings and may additionally be marked with Class designations A, B, C, D or E. These Class designations represent the static weight supportable by cable tray spans.

PRODUCT IDENTITY

The following product identity appears on the product:

Nonmetallic Cable Tray

RELATED PRODUCTS

For metallic cable trays, see Cable Trays (CYOV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE TRAYS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYPB)

GENERAL

This category covers cameras and pan-and-tilt drives.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Camera for Use in Hazardous Locations

Pan-and-Tilt Drive for Use in Hazardous Locations
CAMERA EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYPH)

GENERAL

This category covers camera equipment, such as cameras and pan-and-tilt drives.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Camera for Use in Hazardous Locations
- Pan-and-Tilt Drive for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAEN).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.” The certification mark of UL on the product is the only method provided by UL to identify products manufactured under its certification and follow-up service. The certification mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The listing mark of UL on the product is the only method provided by UL to identify products manufactured under its listing and follow-up service. The listing mark for these products includes the UL symbol (as illustrated in the introduction of this directory) together with the words “LISTED,” a control number, and the product name “Camera for Use in Hazardous Locations” or “Pan and Tilt Drive for Use in Hazardous Locations,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CAPACITORS (CYWT)

GENERAL

This category covers general-use power factor correction units rated 600 V maximum. These assemblies employ integrally protected capacitors investigated under Capacitors (CYWT).

This category does not cover power factor correction units with integral automatic controls or power factor correction unit controllers.

These units are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and are intended for indoor use, unless otherwise indicated. This information, together with other restrictions of use, such as mounting means and special electrical connections, are detailed in the manufacturer’s installation instructions furnished with the product.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Capacitor Bank
- Power Factor Correction Unit

Other product identities may be used as shown in the individual certifications.

RELATED EQUIPMENT

Power factor correction units with integral automatic controls are covered under Industrial Control Panels (NITW).

Power factor correction controllers are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is Part II of ANSI/UL 810, “Capacitors.”

UL MARK

The certification mark of UL on the product is the only method provided by UL to identify products manufactured under its certification and follow-up service. The certification mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The listing mark of UL on the product is the only method provided by UL to identify products manufactured under its listing and follow-up service. The listing mark for these products includes the UL symbol (as illustrated in the introduction of this directory) together with the words “LISTED,” a control number, and the product name “Power Factor Correction Unit” or “Capacitor Bank,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CARBON MONOXIDE ALARMS, SINGLE AND MULTIPLE STATION (CZHF)

GENERAL

This category covers single- and multiple-station carbon monoxide alarms, intended to be employed in indoor locations, as a travel alarm and for use in recreational vehicles.

Single-station Type — Single-station carbon monoxide alarms are self-contained units that incorporate a sensor and related electrical components to generate an audible alarm signal from the unit when an abnormal amount of carbon monoxide actuates the unit. These devices may be energized from (1) a commercial power-supply source by means of permanent wiring in accordance with ANSI/NFPA 70, “National Electrical Code,” or a flexible power-supply cord and plug, (2) use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or (3) by one or more batteries.

Where a battery is employed as a main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal that persists for at least seven days.

Multiple-station Type — Multiple-station carbon monoxide alarms are similar to single-station units but are provided with leads or terminals to permit the interconnection of single-station units so that actuation of any one unit results in the actuation of audible alarms of all units. The installation instructions indicate the maximum number of units that can be interconnected. Refer to the instruction manual provided with each alarm for installation data.

Travel Alarm — A travel alarm consists of a carbon monoxide alarm provided with a mounting bracket for temporary mounting only. Its use is indicated on the UL certification mark.
CARRIERS, RUBBER, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (CZXZ)

GENERAL
This category covers rubber casters which have metal shafts and forks, and are provided with conductive rubber composite wheels or with metal wheels having conductive rubber tires. The casters are intended for use on portable equipment in hospital operating rooms.

Tests indicate that static electrical charges are discharged through these casters when in contact with ground or suitably electrically conductive floor, and that the electrical resistance conforms to the requirements of ANSI/NFPA 99, “Health Care Facilities Code.”

Oil is injurious to rubber compounds and impairs the electrically conductive properties of these casters. The use of floor oils and oily sweeping compounds should therefore be avoided. Insulating floor waxes should not be used.

Conductive floors are required for the proper dissipation of static electrical charges by these casters; see Flooring, Electrically Conductive, Relating to Hazardous Locations (INFZ).

PRODUCT IDENTIFICATION
The following product identification appears on the product:
Electrically Conductive Rubber Caster Relating to Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 1067, “Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark
In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CENTRIFUGES FOR USE IN HAZARDOUS LOCATIONS (DAZV)

GENERAL
This category covers centrifuges designed for use in hazardous (classified) locations. They have been investigated with respect to risk of explosion, fire, electric shock, and injury to persons.

PRODUCT IDENTIFIER
The following product identity appears on the product:
Centrifuge for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark
In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CASTERS, RUBBER, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (CZXZ)

GENERAL
This category covers electrically conductive rubber casters which have metal shafts and forks, and are provided with conductive rubber composite wheels or with metal wheels having conductive rubber tires. The casters are intended for use on portable equipment in hospital operating rooms.

Tests indicate that static electrical charges are discharged through these casters when in contact with ground or suitably electrically conductive floor, and that the electrical resistance conforms to the requirements of ANSI/NFPA 99, “Health Care Facilities Code.”

Oil is injurious to rubber compounds and impairs the electrically conductive properties of these casters. The use of floor oils and oily sweeping compounds should therefore be avoided. Insulating floor waxes should not be used.

Conductive floors are required for the proper dissipation of static electrical charges by these casters; see Flooring, Electrically Conductive, Relating to Hazardous Locations (INFZ).

PRODUCT IDENTIFICATION
The following product identification appears on the product:
Electrically Conductive Rubber Caster Relating to Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 1067, “Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark
In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

any loss, expense or damages, including incidental or consequential dam-
age, arising out of or in connection with the use, interpretation of, or reli-
ance upon this Guide Information.

**MOTOR-OPERATED CHECK-OUT STANDS (DBNT)**

**USE**
This category covers motor-operated check-out stands intended for use in retail stores to facilitate tally and packing operations. These check-out stands are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.” Foot and knee controls are also covered under this category.

**PRODUCT IDENTITY**
The following product identity appears on the product:
Check-out Stand

**RELATED PRODUCTS**
Self-check-out stands not provided with a motorized belt are covered under Custom-built Kiosks (EMHH).
Point-of-sale cabinets not provided with a motorized belt are covered under Wired Cabinets (ZNX8) or Furniture, Powered and Nonpowered (IYNE).
Barcode scanners and cash registers are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

**ADDITIONAL INFORMATION**
For additional information, see Electrical Equipment and Accessories, Electronic (TUJT).

---

**SEASONAL AND HOLIDAY DECORATIVE PRODUCTS (DGVT)**

**GENERAL**
This category covers accessories intended for use with decorative-lighting strings and decorative outfits. This includes such items as flasher controllers with or without sound, and other miscellaneous devices that provide a decorative effect for use with decorative-lighting strings and decorative outfits. The accessories may be in the form of a direct plug-in type.

**USE**
This category covers accessories intended for use with decorative-lighting strings and decorative outfits, electric ornaments, cord sets (extension cords), temporary power taps, decorative-lighting harnesses, or any other nondecorative-lighting products.

**PRODUCT IDENTITY**
The following product identity appears on the product:
Decorative Ornament Accessory

**ADDITIONAL INFORMATION**
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**
The basic standard used to investigate products in this category is ANSI/UL 588, “Seasonal and Holiday Decorative Products.”

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Decorative Ornament Accessory.”

**PRODUCT IDENTITY**
The following product identity appears on the product:
Electric Ornament

**ADDITIONAL INFORMATION**
For additional information, see Seasonal and Holiday Decorative Products (DGVT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**
The basic standard used to investigate products in this category is ANSI/UL 588, “Seasonal and Holiday Decorative Products.”

**UL MARK**
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**PRODUCT IDENTITY**
The following product identity appears on the product:
Electric Ornament

**ADDITIONAL INFORMATION**
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**
The basic standard used to investigate products in this category is ANSI/UL 588, “Seasonal and Holiday Decorative Products.”
SEASONAL AND HOLIDAY DECORATIVE PRODUCTS (DGVT)

Electric Ornaments (DGXC) – Continued

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Ornament." The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, DECORATIVE (DGXO)

GENERAL

This category covers intermediate and candelabra-base lamps for use in certified decorative-lighting strings and outfits. These lamps have been investigated with respect to lamp-base gauging, exposure of live parts, envelope-to-base securement, center- and side-filament protrusion, and lamp-envelope temperature.

PRODUCT MARKINGS

The lamp or the smallest unit container is marked with the wattage, voltage, lamp type, manufacturer’s identification and model or catalog number. Each lamp is marked with the manufacturer’s identification, rated voltage and wattage.

PRODUCT IDENTITY

The following product identity appears on the product:
Decorative Lamp

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is Supplement SA of ANSI/UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE IN
CERTIFIED DECORATIVE-LIGHTING STRINGS AND OUTFITS

Alternate UL Mark

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

DECORATIVE LAMP

FOR USE IN LISTED DECORATIVE LIGHTING STRINGS AND OUTFITS

Control No. *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTFITS, DECORATIVE (DGXW)

USE

This category covers decorative outfits intended for seasonal, temporary use, not to exceed 90 days per year, and includes factory-assembled decoration units providing a seasonal theme, such as wreaths, stars, light sculptures, crosses, candles or candle sets without lamp shades, products in the shape of, or in resemblance to, a Christmas tree not exceeding 50 in. (1270 mm) in height as measured from the top of the tree to the bottom of the base of the tree and provided with simulated branches and needles, products in the shape of, or in resemblance to, a wreath not exceeding 48 in. (1219 mm) in outer diameter and provided with simulated branches and needles, blow-molded figures or objects, animated figures, tree tops, controllers, tree stands, and motorized decorative displays.

Decorative outfits are intended for connection to a receptacle by means of an attachment plug and are portable. Decorative outfits are marked with the maximum number of strings, of the same type, to be connected together for series-connected outfits or the maximum number of lamp holders for outfits that are parallel connected. Parallel-type products should not be intermixed with series-type products. Decorative outfits are not intended to be permanently connected, and are not intended to be used as toys.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Decorative Outfit for Indoor Use and Outdoor Use
Decorative Outfit for Indoor Use Only

RELATED PRODUCTS

This category does not cover decorative-lighting strings or electric ornaments; refer to Strings, Decorative Lighting (DGZZ) and Electric Ornaments (DGNC), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 588, "Seasonal and Holiday Decorative Products."

Christmas trees exceeding 30 in. (762 mm) in height but not exceeding 12 ft (3.7 m) in height, as measured from the top of the tree to the bottom of the base of the tree and provided with simulated branches and needles, products in the shape of, or in resemblance to, a wreath exceeding 48 in. (1219 mm) in outer diameter and provided with simulated branches and needles, or other similar seasonal-use decorative outfits have additionally been investigated to UL Subject 2358, "Outline of Investigation for Fire Tests of Pre-lit Artificial Seasonal Use Trees and Other Seasonal Decorative Items."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative Outfit for Indoor and Outdoor Use" or "Decorative Outfit for Indoor Use Only."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRINGS, DECORATIVE LIGHTING (DGZZ)

USE

This category covers decorative-lighting strings intended for seasonal, temporary use, not to exceed 90 days per year, consisting of a string of lights that may be draped over or around trees or other objects for decorative effect. Decorative-lighting strings are factory assembled with replaceable or nonreplaceable lamps and are connected by means of an attachment plug or the like. Series-connected lighting strings using LED lamps that employ nonreplaceable covers or diffusers are also considered decorative-lighting strings.

Strings are not intended for installation on artificial trees employing metal or metalized plastic needles, leaves or branch coverings. They should also not be installed in a manner that can cut or damage wire insulation. Decorative-lighting strings are not intended to be permanently connected or provide general illumination.

PRODUCT MARKINGS

Decorative-lighting strings intended for indoor use only include, as part of the attached Listing Mark, the statement “For Indoor Use Only.” In addition, the UL Mark and the word “LISTED” are printed in green ink.
Strings, Decorative Lighting (DGZZ)–Continued

Decorative-lighting strings for indoor and outdoor use include, as part of the attached Listing Mark, the statement "For Indoor Use and Outdoor Use." In addition, the UL Mark and the word "LISTED" are printed in red ink.

Decorative-lighting strings are marked with the maximum number of strings, of the same type, to be connected together for series-connected lighting strings or the maximum number of lampholders for lighting strings that are parallel connected. Parallel-type strings should not be intermixed with series type strings. Each string is marked with its type.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Decorative-lighting String for Indoor and Outdoor Use
Decorative-lighting String for Indoor Use Only

RELATED PRODUCTS
Decorative-lighting strings provided with individual lamp shades or diffusers over each individual lamp and decoration units other than strings are covered under Outfits, Decorative (DGXW), Seasonal and Holiday Decorative Product Accessories (DGWU) and Electric Ornaments (DGXQ).

Decorative-lighting strings do not employ lampholders larger than intermediate base and do not include temporary-lighting strings. Construction of strings that employ larger than intermediate base lampholders are covered under Temporary-lighting Strings (XBRT).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 588, "Seasonal and Holiday Decorative Products."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative-lighting String for Indoor Use Only" or "Decorative-lighting String for Indoor Use and Outdoor Use."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS (DHJR)

USE
This category covers circuit breakers which, unless otherwise noted, are of the manually operable, air break type, providing automatic overcurrent protection.

PRODUCT MARKINGS AND RATINGS
These circuit breakers and circuit breaker enclosures are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are located on a wiring diagram or another readily visible location.

1. Circuit breaker enclosures are marked to indicate the temperature rating of all field installed conductors.
2. Circuit breakers with a current rating of 125 A or less are marked as being suitable for 60°C, 75°C only or 60/75°C rated conductors. It is acceptable to use conductors with a higher insulation rating, if the ampacity is based on the conductor temperature rating marked on the breaker.
3. Circuit breakers rated 125 A or less and marked suitable for use with 75°C rated conductors in a circuit breaker enclosure or individually mounted in an industrial control panel with no other component next to it, unless the end-use equipment (panelboard, switchboard, service equipment, power outlet, etc.) is also marked suitable for use with conductors rated 75°C.
4. A circuit breaker with a current rating of more than 125 A is suitable for use with conductors rated 75°C.

CIRCUIT-BREAKER ACCESSORIES (DIHS)

USE
This category covers accessories, such as manual and electrical operators, shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches, intended for field installation for use only with specific circuit-breaker types. Correct combinations of circuit breakers and accessories are indicated by markings on the circuit-breaker and/or the circuit breaker.

PRODUCT IDENTITY
One of the following product identities appears on the product:
C.B. Acc.
Circuit-breaker Accessory
Undervoltage Trip Relay

RELATED PRODUCTS
See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

ADAPTERS, CIRCUIT BREAKER (DHWZ)

USE AND INSTALLATION
This category covers equipment designed to adapt circuit breakers to receiving devices, such as panelboards, panel base assemblies, etc. Field installation is intended only in those receiving devices specifically marked for their use.

Circuit-breaker adapters intended for field installation are provided with installation instructions unless the construction makes the installation obvious.

PRODUCT MARKINGS
Circuit-breaker adapters are marked with a catalog number or the equivalent and the name or trademark of the manufacturer.

Markings to identify the circuit breakers and/or circuit-breaker frames with which the adapter is intended to be used is marked either on a label affixed to the device, imprinted on the smallest packaging, or included as part of the installation instructions.

PRODUCT IDENTITY
The following product identity appears on the product:
Circuit-breaker Adapter

RELATED PRODUCTS
See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION
For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-breaker Enclosures."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker Adapter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

CIRCUIT BREAKER HIGH-FAULT PROTECTORS AND HIGH-FAULT MODULES (DRW) — GENERAL

This category covers circuit-breaker high-fault protectors and high-fault modules designed to be used in conjunction with specific circuit breakers and to be directly connected to the load terminals of the circuit breakers.

A circuit-breaker high-fault protector is a replaceable fuse-like device intended for use in specific fused circuit breakers and/or circuit-breaker high-fault modules.

A circuit-breaker high-fault module is a self-contained unit, with or without provisions for replaceable high-fault protectors or fuses, and is intended to be directly connected to the load terminals of specific circuit breakers. They function only to increase the fault-current-interrupting ability of the combination, which is intended for use in the same manner as circuit breakers when installed at the service and as branch-circuit protection. High-fault protectors and modules are rated 600 V or less.

Circuit-breaker high-fault protectors and modules are so coordinated that they function at currents below those specified in short-circuit test requirements for circuit breakers. Except for this feature of short-circuit operation, combinations of circuit breakers and circuit-breaker high-fault protectors and high-fault modules meet all requirements applicable to branch-circuit and service circuit breakers and, in addition, are required to clear 25 times their amp rating, and circuits of 1000 A or less regardless of amp rating, without causing operation of the high-fault protector or high-fault module.

USE AND INSTALLATION

An interrupting rating on a circuit-breaker high-fault protector and/or high-fault module included in a piece of equipment does not automatically qualify the equipment in which the combination is installed for use on circuits with higher available currents than the rating of the equipment itself.

The combination of a circuit breaker and circuit-breaker high-fault protector or high-fault module is intended to be mounted in certified enclosures.

Equipment (such as panelboards, service equipment, and dead-front switchboards) suitable for use with the combination of circuit-breaker high-fault modules and circuit breaker is marked to indicate that both may be used.

PRODUCT MARKINGS

Circuit-breaker high-fault protectors are marked to indicate the breakers and/or high-fault modules with which they are intended to be used.

Circuit-breaker high-fault modules are marked to indicate the breakers and fuses and/or high-fault protectors with which they are intended to be used.

Circuit-breaker high-fault protectors and high-fault modules marked “Current Interrupting Rating(s), MAXIMUM RMS SYM. AMPERES ______ VOLTS ______” have been investigated in conjunction with the circuit breaker and found suitable for the marked interrupting rating.

Circuit-breaker high-fault modules are marked with the applicable wire range, wire type (copper and/or aluminum, solid and/or stranded), temperature rating of the wire (60 and/or 75°C), and torque ratings for the pressure-wire terminations. For the wire type, the following abbreviations are used: copper (Cu), aluminum (Al), solid (Sol), stranded (Str). A breaker may, instead, be marked with the minimum size busbar with which it can be used.

If pressure-terminal connectors are not provided on a circuit-breaker high-fault module as shipped, the module is marked stating which pressure-terminal connectors or component terminal kits are acceptable for use with the module.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Circuit-breaker High-fault Module

Circuit-breaker High-fault Protector

The words “Circuit Breaker” may be abbreviated “C.B.”

RELATED PRODUCTS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS FOR USE IN COMMUNICATIONS EQUIPMENT (DITT)

USE

This category covers dc-rated circuit breakers intended to provide branch-circuit protection in communications circuits. The acceptability of circuit breakers at 100% of the ampere rating is determined in the end product. Circuit breakers that may be used in ambient temperatures other than 25°C are marked with either a maximum ambient temperature or a range of temperatures. These circuit breakers have not been investigated for use on motor circuits.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Circuit Breaker for Use in Communication Equipment
- Circuit Breaker for Use in Communications Equipment
- Communication Equipment Circuit Breaker
- Communications Equipment Circuit Breaker

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ), Circuit-breaker Accessories for Use in Communications Equipment (DITX) and Circuit-breaker Accessories (DHJ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures,” and ANSI/UL 489A, “Circuit Breakers for Use in Communications Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit-breaker Accessory for Use in Communications Equipment.”

CIRCUIT BREAKERS, MOLDED CASE AND CIRCUIT-BREAKER ENCLOSURES FOR USE IN PHOTOVOLTAIC SYSTEMS (DIUR)

GENERAL

This category covers circuit breakers and circuit-breaker enclosures intended to provide overcurrent protection and disconnecting means in dc photovoltaic (PV) systems in accordance with Article 690 of ANSI/NFPA 70, “National Electrical Code.” These circuit breakers are intended for use with certified enclosures as part of other certified equipment.

PV circuit breakers are rated up to 1000 V dc maximum and, unless otherwise marked, are not intended to be loaded to exceed 80% of the current rating.

PV circuit breakers are intended for use in ambient temperatures between -20 and 50°C. A multi-pole PV breaker is intended for connection to individual circuits on each pole unless marked otherwise. Circuit breakers may be mounted in any position unless marked to indicate otherwise. If, however, the circuit breaker is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the “on” position.
CIRCUIT BREAKERS (DHJR)

The interrupting rating on a circuit breaker included in a piece of equipment does not automatically qualify the equipment in which the circuit breaker is installed for use on circuits with higher available currents than the rating of the equipment itself.

**PRODUCT MARKINGS**

These circuit breakers are marked with the manufacturer’s name and type designation, voltage rating up to 1000 V dc maximum, amperage rating, interrupting current rating at each voltage as necessary, and open/closed type designation, voltage rating up to 1000 V dc maximum, ampere rating, and the word “Photovoltaic” may be abbreviated “PV.”

A PV circuit breaker intended only for use within a ventilated enclosure is marked with the specific certified enclosure for which it is intended, or the size of the enclosure and the location and size of the ventilation openings.

A circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking of the circuit breaker.

These circuit breakers or circuit-breaker enclosures are marked “Photovoltaic” (or “PV”) and may, in addition, be marked “Suitable for Use in Photovoltaic Systems in Accordance with Article 690 of the NEC,” or equivalent.

A multi-pole PV circuit breaker or PV circuit-breaker enclosure is intended for individual circuits on each pole unless specifically marked with a diagram and/or other verbiage detailing the correct electrical connections.

PV circuit breakers are marked with the applicable wire range, wire type, and stranding if different from building wire, temperature rating of the wire, and torque ratings for the pressure-wire terminations. For the wire type, the following abbreviations are used: copper (Cu), solid (sol), stranded (str). A breaker may, instead, be marked with the minimum size bus bar with which it can be used.

PV circuit breakers are marked “50°C.”

A PV circuit-breaker enclosure may be identified with an enclosure-type designation and is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

A PV circuit-breaker frame is marked with the interrupting ratings for the intended interchangeable trip units.

A PV circuit-breaker trip unit is marked with the circuit-breaker frame for which it is intended.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Enclosed Photovoltaic Circuit Breaker
- Photovoltaic Circuit Breaker
- Photovoltaic Circuit-breaker Enclosure
- Photovoltaic Circuit-breaker Frame
- Photovoltaic Circuit-breaker Trip Unit

The words “Photovoltaic” may be abbreviated “PV.”

The words “Circuit Breaker” may be abbreviated “Cir. Bkr.” or “C.B.”

**RELATED PRODUCTS**

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

**ADDITIONAL INFORMATION**

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 4898, “Outline of Investigation for Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures for Use with Photovoltaic (PV) Systems.”

- **UL MARK**
  - The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

- **Alternate UL Mark**

- **UL MARK**
  - The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Circuit

CIRCUIT BREAKERS, MOLDED CASE AND CIRCUIT-BREAKER ENCLOSURES (DIVQ)

This category covers circuit breakers and circuit-breaker enclosures designed to provide service-entrance, feeder or branch-circuit protection in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC).

Circuit breakers are intended for use with certified enclosures, or as part of other certified equipment, or without enclosures where acceptable.

Investigation of a certified “replacement circuit breaker” involves only the circuit breaker and associated parts; the end application or any series combination application has not been investigated.

Some circuit breakers are not provided with a means to prevent their installation in Class CTL assemblies. These circuit breakers are for use in old style, non-Class CTL equipment and are marked “For Replacement Use Only, Not CTL Assemblies.”

Circuit breakers marked “SWD” and rated 347 V or less are suitable for switching fluorescent lighting loads on a regular basis at their rated voltage.

Circuit breakers marked “HID” have been investigated for switching high-intensity-discharge lighting loads on a regular basis at their rated voltage.

Some circuit breakers include a pole intended to disconnect the grounded conductor or branch circuit. All poles of these circuit breakers open simultaneously.

Single-pole circuit breakers rated 120 V ac are suitable for use on circuits rated 120 V to ground.

Single-pole or multi-pole independent trip circuit breakers with handle ties rated 120/240 V ac, are suitable for use on multi-wire circuits with line-to-line or line-to-neutral connected loads.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 120/240 V ac, are suitable for use in line-to-line single-phase circuits and appliance branch circuits connected to 3-phase, 4-wire systems, provided the systems have a grounded neutral and the voltage to ground does not exceed 120 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V dc, are suitable for use in line-to-line connected 3-wire dc circuits supplied from a system with a grounded neutral where the voltage to ground does not exceed 125 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V (both ac and dc), are suitable for use in accordance with either of the above two paragraphs, as applicable.

Multi-pole circuit breakers without a common trip function are marked “independent trip,” “no common trip” or equivalent wording.

3-pole circuit breakers having provision for two poles to be connected to a bus structure and a third isolated pole (commonly referred to as delta breakers) are marked “For Replacement Use Only.”

3-pole circuit breakers are suitable for use on 3-phase systems. A 3-pole breaker used in place of a 2-pole breaker on a 3-phase system, such as a 2-pole breaker used in a branch circuit that is actually two legs of a 3-phase system, is acceptable without the 3-pole breaker being specifically marked.

Multi-pole common trip circuit breakers rated 120/240 V ac are suitable for use in a single-phase multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 120 V.

Multi-pole common trip circuit breakers rated 125/250 V or 125/250 V dc are suitable for use in a single-phase and a dc multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 125 V.

Circuit breakers, the performance of which may be affected by a 40°C ambient temperature within the enclosure, and that have been investigated for this application, are marked “40°C.”

Unless otherwise marked, circuit breakers should not be loaded to exceed 80% of their current rating, where in normal operation the load will continue for three hours or more.
Circuit-breaker enclosures marked for service equipment use may also be used to provide the main control and means of cutoff for a separately-derived system or a second building.

Circuit-breaker enclosures identified with an enclosure type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). A current-limiting circuit breaker is one that does not employ a fusible element and that when operating within its current-limiting range, limits the let-through I2t to a value less than the I2t of a 1/2 cycle wave of the symmetrical prospective current.

All certified circuit breakers are suitable for group motor protection in accordance with 430.53 of the NEC. Some certified circuit breakers have adjustable settings and can be repeatedly field adjusted for all changeable characteristics. Adjustable circuit breakers are marked with the maximum amperes rating and either a percentage or similar markings, or with current markings for each continuous-current adjustment setting.

**PRODUCT TYPES**

Circuit breakers and circuit-breaker enclosures are indicated by the label designations as follows:

**Circuit Breaker** — without enclosure, and with noninterchangeable trip units.

**CTL Circuit Breaker** — has physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, is designed to prevent the installation of more circuit breaker poles than the number for which the assembly is designed and rated.

**Circuit-breaker Frame** — frame only of circuit breaker with provision for interchange trip units. A labeled circuit-breaker frame is certified for use only with a labeled circuit-breaker trip unit.

**Circuit-breaker Trip Unit** — trip unit only of circuit breaker having provision for interchangeable trip units.

**Circuit-breaker Enclosure** — enclosure only for individual 1-, 2- or 3-pole circuit breaker or for two single-pole breakers not interconnected.

**Replacement Circuit Breaker** — a present design with external modifications to permit its mounting in place of obsolete designs of the same manufacturer in previously certified applications, such as panelboards, switchboards and the like, which are still in service.

**INSTALLATION**

Some circuit breakers include a ground-fault trip element. These ground-fault trip elements have been investigated in accordance with ANSI/UL 1053, “Ground-Fault Sensing and Relaying Equipment,” and are suitable for providing ground-fault protection of equipment in accordance with 215.10, 250.95 or 240.13 of the NEC.

Certified circuit breakers having ground-fault elements intended for use in accordance with NEC Articles 426 or 427 are covered under Circuit Breakers with Equipment Ground-fault Protection (DIYA).

Circuit breakers that include arc-fault elements intended for use in accordance with 210.12 of the NEC are covered under Arc-fault Circuit Interruption, Combination Type (AWAH). Circuit breakers with arc-fault elements intended for use in those municipalities using the installation requirements of 210.12 of the 1999 – 2005 editions of the NEC are covered under Arc-fault Circuit Interruption, Branch/Feeder Type (AVZC).

Certified circuit breakers are tested under overload conditions at six times the rating to cover motor-circuit applications and are suitable for use as motor-circuit disconnects per 430.109 of the NEC. Certified circuit breakers may be mounted in any position unless marked to indicate otherwise. If, however, the circuit breaker is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the “on” position. Lines and load markings on a circuit breaker are intended to limit connections thereto as marked.

**RATINGS**

Certified circuit breakers are rated 600 V or less. A circuit breaker is marked ac or dc, or both ac and dc. A symbol (+), where used, represents ac. The frequency is included if other than 60 Hz.

Circuit breakers that have an interrupting rating higher than 5000 A are marked to indicate the higher rating(s).

An interrupting rating on a circuit breaker included in a piece of equipment does not automatically qualify the equipment in which the circuit breaker is installed for use on circuits with higher available currents than the rating of the equipment itself. Circuit-breaker enclosures that have a short-circuit current rating are marked accordingly.

**PRODUCT MARKINGS**

These circuit breakers are marked with the manufacturer’s name and type designation, voltage rating, ampere rating, interrupting current rating at each voltage as necessary, frequency, and open/closed (on/off). Also see USE above.

These circuit breakers are marked with the applicable wire range, wire type (copper and/or aluminum, solid and/or stranded), temperature rating of the wire (60 and/or 75°C), and torque ratings for the pressure-wire terminations. For the wire type, the following abbreviations are used: copper (Cu), aluminum (Al), solid (sol), stranded (str). A breaker may, instead, be marked with the minimum size bus bar with which it can be used.

If pressure-terminal connectors are not provided on a circuit breaker as shipped, the circuit breaker is marked stating which pressure-terminal connectors or component terminal kits are acceptable for use with the circuit breaker or circuit breaker-frame.

Circuit breakers are marked “Line/Load” unless acceptable for use with the connections reversed.

A circuit breaker intended only for use within a ventilated enclosure is marked with the specific certified enclosure for which it is intended, or the size of the enclosure and the location and size of the ventilation openings. A circuit breaker rated more than 4000 A intended only for cable connections is marked “For Cable Connection Only.”

A circuit breaker marked “40°C” is suitable for use in an ambient environment of up to 40°C. This marking is optional for electronic-trip circuit breakers since they are not affected by ambient temperatures.

The fourth (neutral) pole of a 4-pole circuit breaker is marked “Protection – X% IeX,” where “X” is 0, 50 or 100, which is the percentage ampacity of the fourth pole.

A circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker, or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking of the circuit breaker.

2-pole circuit breakers suitable for controlling 3-phase, corner-grounded delta circuits are marked “1 – 3” to indicate their suitability.

Circuit-breaker enclosures that are suitable for use as service equipment are marked accordingly.

Some circuit breakers are intended to be used with uninterruptible power supplies (UPS) with two or three poles connected in series. These circuit breakers are marked with both the maximum and nominal DC voltage of the system where use is intended, a wiring diagram showing the proper connections of the poles in series, and a statement that these DC ratings are applicable only with UPS.

Current-limiting circuit breakers are marked “current limiting” and are marked either to indicate the let-through characteristics or to indicate where such information may be obtained.

Circuit breakers investigated for application aboard noncombatant and auxiliary naval ships are marked “Naval.” Naval circuit breakers may also be marked “50°C.”

CIRCUIT BREAKERS AND MOLDED-CASE SWITCHES FOR USE IN WIND TURBINES (DIXM)

GENERAL

This category covers molded-case circuit breakers and molded-case switches intended to provide overcurrent protection and disconnecting means for use in wind turbines (WT) applications for nacelle, hub, tower, and ground installations. These circuit breakers are intended for use with certified enclosures or as part of other certified equipment.

WT circuit breakers are rated up to 690 V ac and, unless otherwise marked, are not intended to be loaded to exceed 80% of the current rating. WT circuit breakers are intended for use in ambient temperatures between -30 to +50°C (-22°F to +122°F) or at -40°C to +50°C (-40°F to +122°F). Circuit breakers may be mounted in any position unless marked to indicate otherwise. If, however, the circuit breaker is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the “on” position.

The interrupting rating on a circuit breaker included in a piece of equipment does not automatically qualify the equipment in which the circuit breaker is installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT MARKINGS

These circuit breakers are marked with the manufacturer’s name and type designation, voltage rating up to 690 V ac, ampere rating, interrupting current rating at each voltage, and open/closed (on/off). Also see GENERAL above.

These circuit breakers are marked “Wind Turbine” (or “WT”). Unless otherwise marked, WT circuit breakers should not be loaded to exceed 80% of their current rating, where in normal operation the load will continue for three hours or more.

If pressure-terminal connectors are not provided on a circuit breaker as shipped, the circuit breaker is marked stating which pressure-terminal connectors or component terminal kits are acceptable for use with the circuit breaker or circuit-breaker frame.

A WT circuit breaker intended only for use within a ventilated enclosure is marked with the specific certified enclosure for which it is intended, or the size of the enclosure and the location and size of the ventilation openings.
Circuit Breakers, Molded-case Circuit Breakers and Molded-case Switches for Use in Wind Turbines (DIXM)–Continued

WT circuit breakers are marked with the applicable wire range, wire type, and stranding if different from building wire, temperature rating of the wire, and torque ratings for the pressure-wire terminations. For the wire type, the following abbreviations are used: copper (Cu), aluminum (Al), solid (sol), stranded (str). A breaker may, instead, be marked with the minimum size busbar with which it can be used.

WT circuit breakers or switches are marked as being suitable for 75°C (167°F) wire unless marked for busbar connections only. Devices may instead be marked with the minimum size busbar with which it can be used.

WT circuit breakers are marked “-30 to +50°C (-22°F to +122°F)” or “-40°C to +50°C (-40°F to +122°F).”

A WT circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking of the circuit breaker.

A WT circuit-breaker frame is marked with the interrupting ratings for the intended interchangeable trip units.

A WT circuit-breaker trip unit is marked with the circuit-breaker frame for which it is intended.

PRODUCT IDENTITY
One of the following product identities appears on the product:

- Wind Turbine Circuit Breaker
- Wind Turbine Circuit-breaker Frame
- Wind Turbine Circuit-breaker Trip Unit

The words “Wind Turbine” may be abbreviated “WT.” The words “Circuit Breaker” may be abbreviated “C. Bkr.”

RELATED PRODUCTS
See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION
For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic requirements used to investigate products in this category are ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures,” and ANSI/UL 1053, “Ground-Fault Sensing and Relaying Equipment.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker with Equipment Ground Fault Protection” (or “C.B. W/EQ.GFP”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS WITH GROUND-FAULT PROTECTION (DIYA)

USE AND INSTALLATION
This category covers combination circuit breaker and equipment ground-fault protective devices designed to serve the dual function of providing overcurrent protection, and ground-fault protection for equipment, as defined in the NEC.

Some devices rated 120/240 V do not have a load neutral wire connector and are intended for use with 208 V or 240 V loads only.

Devices not marked “Line” and “Load” are suitable for operation with a supply source connected to either side.

PRODUCT IDENTITY
One of the following product identities appears on the product, located where visible with a dead-front removed, while the device is installed:

- CB/GFCI/Combination AFCI
- Circuit Breaker/Ground-fault Circuit Interrupter/Combination Arc-fault Circuit Interrupter

RELATED PRODUCTS
These devices provide Class A ground-fault circuit interrupter protection and are intended to be installed only on grounded 60 Hz alternating-current systems where Class A GFCI protection is required in accordance with the NEC.

These devices are intended to be installed in new or existing service equipment, panelboards, or the like.

A two-wire device is not suitable for use in a multiwire branch circuit as defined in the NEC.

For additional information, see Circuit Breakers (DHJR), Arc-fault Circuit Interrupters (AVI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and
CIRCUIT BREAKERS (DHJR)

FUSED CIRCUIT BREAKERS (DIYV)

USE AND INSTALLATION

This category covers fused circuit breakers designed to provide service-entrance, feeder or branch-circuit protection in accordance with ANSI/NFPA 70, “National Electrical Code.” They are rated 600 V or less. These fused circuit breakers are intended for use with certified enclosures, or as part of other certified equipment, or without enclosures where applicable.

Fused circuit breakers include all the mechanical features of molded-case circuit breakers and, in addition, have one or more replaceable current limiters or fuses that function to increase the fault-current interrupting ability. They are intended to be used in the same manner as other circuit breakers when installed at the service and as branch-circuit protection and are intended to be mounted in certified enclosures. Fused circuit breakers are identified with respect to their performance characteristics as either Type 1 or Type 2.

Type 1 fused circuit breakers meet all performance requirements of molded-case circuit breakers. The fuse, fuses, or replaceable current limiters function only to extend the fault-current interrupting rating beyond the short-circuit test requirement applicable. Type 1 devices are limited to constructions that are designed to accommodate and coordinate with fuses or replaceable current limiters having high interrupting a capacity ratings.

Type 2 fused circuit breakers use a fuse, fuses or current limiters so coordinated that they function at currents below those specified in short-circuit test requirements. Except for these feature of short-circuit operation, Type 2 fused circuit breakers meet all requirements applicable to molded-case circuit breakers and, in addition, are required to clear circuits up to and including 25 times their amp rating, and circuits of 1000 A or less regardless of amp rating, without causing operation of the fuse, fuses or current limiters that are a part of the device. Type 2 devices are limited to constructions designed to accommodate and coordinate with fuses having high interrupting-capacity ratings.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fused Circuit-breaker Frame
- Fused Circuit-breaker Frame

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category are ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures,” and ANSI/UL 943, “Ground-Fault Circuit-Interrupters.”

PRODUCT MARKINGS

A UL Mark (Certified) and Listing Mark (Certified) are marked to indicate the higher rating(s).

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

PRODUCT MARKINGS

A UL Mark (Certified) and Listing Mark (Certified) are marked to indicate the higher rating(s).

COMMERCIAL OFF-THE-SHELF MOLDED-CASE CIRCUIT BREAKERS FOR USE ON NON-NUCLEAR U.S. NAVAL COMBATANT SHIPS (DKWA)

GENERAL

This category covers U.S. Naval commercial off-the-shelf (COTS) three- and four-pole molded-case circuit breakers intended for use aboard non-nuclear U.S. Naval combatant ships in electrical assemblies (switchboards and load centers) installed on shock isolators (mounts). COTS circuit breakers are rated 480 V ac, 60 Hz, and/or 250 V dc. Unless otherwise marked, COTS circuit breakers are not intended to be loaded to exceed 80% of the current rating.

COTS circuit breakers and accessories are intended for use in an ambient temperature range of 15° to 40°C. COTS circuit breakers may be mounted in any position unless marked to indicate otherwise. If, however, the circuit breaker is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the “ON” position.

COTS circuit breakers that have an interrupting rating higher than 5000 A are marked to indicate the higher ratings.

PRODUCT MARKINGS
COMMERCIAL OFF-THE-SHELF MOLDED-CASE CIRCUIT-BREAKER ACCESSORIES FOR USE ON NON-NUCLEAR U.S. NAVAL COMBATANT SHIPS (DKWE)−Continued

CIRCUIT BREAKERS (DHJR)

Commercial Off-the-Shelf Molded-case Circuit Breakers for Use on Non-Nuclear U.S. Naval Combatant Ships

COTS circuit breakers are marked with:
1. the manufacturer’s name and type designation, electrical ratings, and additional ratings at each voltage as necessary, and open/closed (on/off) (also see GENERAL above).
2. “50°C” and “60 Hz,”
3. the shock fragility rating in g’s
4. the type of solder used (leaded or lead-free).
5. the interrupting ratings for the intended interchangeable trip units, and
6. the circuit-breaker frame for which it is intended to be used, and
7. “US Naval COTS” and “UL 489D.”

COTS circuit breakers are also marked with the applicable wire range, type, and stranding if different from building wire, and torque ratings for the pressure-wire terminations. For the wire type, the following abbreviations are used: copper (Cu), solid (sol), stranded (str). A COTS circuit breaker may, instead, be marked with the minimum size busbar with which it can be used.

If pressure-terminal connectors are not provided on a COTS circuit breaker as shipped, the circuit breaker is marked stating which pressure-terminal connectors or component terminal kits are acceptable for use with the circuit breaker or circuit-breaker breaker frame.

A COTS circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking as well as the rated tripping current and time if greater than 0.25 sec. This marking appears on the accessory or on the installation instructions provided with the accessory.

PRODUCT IDENTITY

One of the following product identities appears on the product:
1. the manufacturer’s name and type designation, electrical ratings, and additional ratings at each voltage as necessary, and open/closed (on/off) (also see GENERAL above).
2. “US Naval COTS” and “UL 489D,” and
3. the specific U.S. Naval COTS circuit breakers and/or circuit-breaker frames for which the accessories are intended to be used.

Where the accessory is a shunt trip device suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking as well as the rated tripping current and time if greater than 0.25 sec. This marking appears on the accessory or on the installation instructions provided with the accessory.

RELATED PRODUCTS

See Commercial Off-the-Shelf Molded-case Circuit Breakers for Use on Non-Nuclear U.S. Naval Combatant Ships (DKWA) and Circuit-breaker Accessories (DIHS).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 489D, “Outline of Investigation for US Naval Commercial-Off-the-Shelf (COTS) Designated Molded-Case Circuit Breakers and Accesso-
ries for Use on Non-Nuclear Naval Combatant Ships.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (DKAR)

This category covers circuit breakers which, unless otherwise noted, are of the manually operable, air-break type, providing automatic overcurrent protection.

These circuit breakers and circuit breaker enclosures are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal conductors and are on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of Type R, or other 60°C wire, in circuits rated 10 A or less, and the use of Type RH, or other 75°C wire, for higher-amp-rated circuits.

A suitable marking is required in a circuit-breaker enclosure, whether or not terminals are mounted therein, if it is intended that the breaker to be mounted therein is intended to be used with aluminum wire.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOOK FOR THE UL MARK ON PRODUCT
## BRANCH CIRCUIT AND SERVICE CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (DKAR)

### USE

This category covers enclosed circuit breakers and circuit-breaker enclosures designed to provide service-entrance or feeder or branch-circuit protection in accordance with ANSI/NFPA 70, “National Electrical Code.” These circuit breakers are designed to carry rated current at ambient temperatures of 40°C or less and are marked “40°C.” Circuit-breaker enclosures are intended for use only with certified mechanisms specified in the enclosure markings.

### PRODUCT IDENTITY

One of the following product identities appears on the product:
- Circuit Breaker for Use in Hazardous Locations
- Circuit Breaker Enclosure for Use in Hazardous Locations
- The words “Circuit Breaker” may be abbreviated “C.B.”
- The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

### RELATED PRODUCTS

See Circuit Breakers (DHJR) and Ground-fault Circuit Interrupters (DKUY).

### ADDITIONAL INFORMATION

For additional information, see Circuit Breakers for Use in Hazardous Locations (DKAR) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

### REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures,” and ANSI/UL 508, “Industrial Control Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker for Hazardous Locations” or “Circuit Breaker Enclosure for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## BRANCH CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER 1000 VOLTS (DLA)

### GENERAL

This category covers indoor medium-voltage ac power circuit breakers rated over 1000 V and the metal-clad switchgear in which they are intended to be installed. The term “indoor” does not preclude the use of these circuit breakers in outdoor enclosures, but rather defines the class of equipment. These circuit breakers are specifically intended to provide service-entrance, feeder or branch-circuit overcurrent protection, service as a disconnecting means, or both. These devices are intended for installation in accordance with the requirements of ANSI/NFPA 70, “National Electrical Code.”

### CIRCUIT BREAKERS

The circuit breakers are three-pole devices of the draw-out type, are trip-free and may be air break, vacuum-type or devices employing other insulation medium.

### Circuit-breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a “close-and-latch” rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms symmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit-breakers are marked with an interrupting rating “I” in rms symmetrical amperes that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI C37.06 (1987), “AC High-
Metal-clad switchgear may consist of one or two compartments in a vertical section. A compartment may be intended to house a circuit breaker, or it may be designated an auxiliary compartment. An auxiliary compartment may typically contain potential transformers, control gear, protective relays and the like. Vertical sections may consist of a single freestanding section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amps. Each vertical section of a line up of abutting vertical sections is provided with a "K" factor marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

A section, with only horizontal bus or with no installed equipment, may be provided. This section is identified as an enclosure and is numbered as part of a line-up.

Current sensors are factory installed and may be mounted on the circuit breaker or on the line or load bus within the metal-clad switchgear. The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically located on the door of the circuit-breaker compartment or in an auxiliary compartment.

**Metal-clad Switchgear Ratings**

Metal-clad switchgear assemblies are marked with the following ratings:

- **Maximum voltage**: voltage to ground for an AC line, or rated voltage for DC lines, or any other specified or implied voltage, as depicted in Illustration 1.
- **Frequency**: rated frequency, as specified in the installation instructions provided by the manufacturer.
- **Insulating level**: for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V max" by the same factor, or at a lower voltage, as depicted in Illustration 1.
- **Continuous current**: the current the circuit breaker is capable of carrying for long periods of time, as specified in the installation instructions provided by the manufacturer.
- **Short-circuit current**: the peak value of the fuse or circuit breaker protective device that has interrupted the fault current, as determined by the manufacturer.
- **Full wave impulse withstand voltage**: the voltage, as depicted in Illustration 1, that the circuit breaker may withstand in a test as specified by the manufacturer.
- **Year of manufacture**: the year the circuit breaker was manufactured, as specified in the installation instructions provided by the manufacturer.
- **Manufacturer's name**: the name of the circuit breaker manufacturer, as specified in the installation instructions provided by the manufacturer.
- **Type designation**: the type designation of the circuit breaker, as specified in the installation instructions provided by the manufacturer.
- **Serial number**: the serial number of the circuit breaker, as specified in the installation instructions provided by the manufacturer.
- **Overcurrent category**: the overcurrent category designation of the circuit breaker, as specified in the installation instructions provided by the manufacturer.
- **Application**: the application designation of the circuit breaker, as specified in the installation instructions provided by the manufacturer.

**Product Identity**

One of the following product identities appears on the product:

- **Ground and Test Device**
- **Medium-voltage AC Power Circuit Breaker**
- **Metal-clad Switchgear**
- **Metal-clad Switchgear Enclosure**

**Additional Information**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

The basic standard used to investigate ground and test devices in this category is ANSI/IEEE C37.20.6 (2007), “4.76 kV to 38 kV Rated Ground and Test Devices Used in Enclosures.”

### Additional Certification Markings

Switchgear investigated as arc resistant is additionally marked with the following information:

#### ARC-RESISTANT SWITCHGEAR

**ALSO CERTIFIED TO** [standard designation and date]

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the word “CERTIFIED” and “SAFETY,” the geographic identifier(s), and one of the following product names as illustrated in the Introduction of this Directory, and the following information:

**NAMEPLATE**

Control No.

**PRODUCT IDENTITY**

Medium-voltage Circuit Breaker

**ADDITIONAL INFORMATION**

UL MARK

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### CIRCUIT BREAKERS, MEDIUM VOLTAGE, CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (DLBC)

**USE**

This category covers circuit breakers of current design that have been modified to replace obsolete circuit breakers. These circuit breakers are intended to be installed in switchgear where the exact replacement is no longer available. The ratings on the circuit breaker apply unless the ratings on the host switchgear are lower. In either case the lower rating is applicable.

**PRODUCT MARKINGS**

In addition to other required markings, the nameplate on the circuit breaker is marked to indicate the type of switchgear for which the circuit breaker is designed, including the switchgear manufacturer and type or model number.

**PRODUCT IDENTITY**

The following product identity appears on the product:

**MEDIUM VOLTAGE CIRCUIT BREAKER AS DESIGNATED ON THE NAMEPLATE**

Alternate UL Mark

**ADDITIONAL INFORMATION**

FOR USE ONLY IN SWITCHGEAR AS DESIGNATED ON THE NAMEPLATE

Control No.

The nameplate on the circuit breaker shall identify the switchgear for which the circuit breaker is designed, including the switchgear manufacturer and type or model number.

**CIRCUIT BREAKER SWITCHGEAR, METAL ENCLOSED, OVER 1000 VOLTS (DLBK)**

**GENERAL**

This category covers indoor medium-voltage ac power circuit breakers rated over 1000 V and the metal-enclosed switchgear in which they are
Circuit-breaker Switchgear, Metal Enclosed, Over 1000 Volts (DLBK)–Continued

installed. The term “indoor” does not preclude the use of these circuit breakers in outdoor enclosures, but rather defines the class of equipment. These circuit breakers are specifically intended to provide overcurrent protection. The circuit breakers are supplemented by a series-connected switch that can ground the circuit and serve as a disconnecting means.

This equipment is intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

CIRCUIT BREAKERS

The circuit breakers are three-pole devices of the stationary or drawout type, are trip-free and may be either gas insulated or vacuum-type devices.

Circuit-breaker Ratings

Each circuit breaker section is provided with a marking that indicates the voltage and current ratings. This marking also contains a “close-and-latch” rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amps. Circuit breakers may be rated up to 38 kV and 3150 A.

Circuit breakers are marked with an interrupting rating “I” in rms symmetrical amps that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06 (1987), “AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis Preferred Ratings and Related Requirements,” also provide an interrupting rating factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. When there is a marked “K” factor, the circuit breaker may interrupt a current greater than “I” by a factor up to the value of “K,” at a voltage reduced from the maximum rated voltage, “V max,” by the same factor, or at a lower voltage and reduced rating.

In an assembly of products, the Certification Mark is applied to each vertical section eligible for certification. The Certification Mark covers only the vertical sections included in the assembly.

Metal-enclosed switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulting level, continuous current, short-time current and momentary current. This marking appears on each vertical section bearing the UL Certification Mark.

ENCLOSURES

An enclosure investigated to determine that it is rainproof is marked “Rainproof,” “Outdoor” or “3R.” Enclosures may be either nonventilated or ventilated. Enclosures are marked to indicate the exposure Category (A, B, C, or D) for which they are intended. Enclosures marked “Category A” are intended to be installed in areas accessible to the unmonitored general public; enclosures marked “Category B” are intended to be installed in areas accessible to authorized personnel only; enclosures marked “Category C” are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

CIRCUIT BREAKERS and METAL-CLAD SWITCHGEAR OVER 1000 VOLTS (DLAH)

continue to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation instructions are specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with an Accessibility Type designation based on the construction and the standard to which the switchgear is investigated.

Additional Certification Markings

Type 1 designates switchgear with arc-resistant construction at the front only.

Type 1B designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Types 1D-SR, 1D-SL, 1D-R designate switchgear with arc-resistant construction in the front; and at the right side (SR), left side (SL) or the rear (R), respectively.

Types 1C designate switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells. In Type 1C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

Type 2 designates switchgear with arc-resistant construction at the front sides and rear.

Type 2B designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

Type 2C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

PRODUCT IDENTITY

The following product identity appears on the product:

Metal-enclosed Circuit-breaker Switchgear

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers and Metal-clad Switchgear Over 1000 Volts (DLAH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The following product identity appears on the product:

Metal-Enclosed Switchgear Assemblies – Conformance Test Procedures.

The basic standard used to investigate switchgear certified as “arc resistant” is IEEE C37.20.7 (2007), “Guide for Testing Metal-Enclosed Switchgear Rated Up to 38 kV for Internal Arcing Faults.” Arc-resistant switchgear investigated prior to 2007 was investigated to IEEE C37.20.7 (2001), “Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults.” The appropriate standard used is indicated in the Certification Mark.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

In an assembly of products, the Certification Mark is applied to each vertical section of a line-up. The Certification Mark covers only the sections included in the assembly.

The Certification Mark for each circuit-breaker section of a line-up of abutting vertical sections is provided with a “_____ of _____” marking, where the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark. Only those sections bearing the Certification Mark are covered under UL’s Follow-Up Service.

Additional Certification Markings

Switche investigated as arc resistant is additionally marked with the following information:

ARC-RESISTANT SWITCHGEAR

ALSO CERTIFIED TO [standard designation and date]

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible.
CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR
OVER 1000 VOLTS (DLAH)

Circuit-breaker Switchgear, Metal Enclosed, Over 1000 Volts (DLBK)—Continued

for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Metal-enclosed Circuit Breaker Switchgear.”

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the sections included in the assembly.

The UL Mark for each vertical section of a line-up of abutting vertical sections is provided with a “____” marking where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark. Only those sections bearing the UL Mark are covered under UL’s Follow-Up Service.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear additionally investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

The Classification Mark consists of the Listing Mark noted above and the following additional information:

ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT PROTECTORS (DLBX)

USE

This category covers circuit protectors designed for installation in standard Edison-base fuseholders and intended to provide overcurrent protection for services and branch circuits. Circuit protectors are not provided with manual “On” and “Off” switching means, but are provided with a trip-free manual reset to reclose the circuit after automatic opening as a result of overload or short circuit.

Circuit protectors are suitable for use on circuits where the available fault current does not exceed 5000 A rms symmetrical.

PRODUCT IDENTITY

The following product identity appears on the product:

Circuit Protector

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5C, “Surface Raceways and Fittings for Use with Data, Signal, and Control Circuits.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark of UL for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is applied to each length of extruded channel cover or base and each fitting or the smallest unit container in which the fitting is packaged.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker Switchgear.”

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Protector.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLASS 2 AND COMMUNICATION CABLE MANAGEMENT SYSTEMS
(DLPV)

USE

This category covers cable management systems consisting of extruded channels and related fittings for the routing of Class 2 and communication circuits.

These products are not intended for applications that require the use of a raceway in accordance with ANSI/NFPA 70, “National Electrical Code.” These products are not intended for use in environmental air spaces, plenums, risers or any concealed use.

PRODUCT MARKINGS

The number, type and size of cable which may be installed in the certified system is marked on the lengths of extruded channel, on the installation instruction sheet or on the package in which it is shipped. Each length of extruded channel is marked “For Class 2 Circuits Only,” “For Communication Circuits Only,” or equivalent wording.

PRODUCT IDENTITY

The following product identity appears on the product:

Class 2 and Communication Cable Management System

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5C, “Surface Raceways and Fittings for Use with Data, Signal, and Control Circuits.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is applied to each length of extruded channel cover or base and each fitting or the smallest unit container in which the fitting is packaged.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Class 2 and Communication Cable Management System.”

The Listing Mark is applied to each length of extruded channel cover or base and each fitting or the smallest unit container in which the fitting is packaged.

CLEANING MACHINES (DMDT)

This category covers household and commercial dishwashers, motor-operated cleaning machines, electrically-operated high-pressure cleaning machines, vacuum cleaning machines and blower cleaners.

Appliances such as wet-pick-up vacuum cleaners intended to employ water or other solutions with similar characteristics are provided with means for grounding, are double-insulated.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with Sections 250.110 and 250.114 of ANSI/NFPA 70, “National Electrical Code” (NEC). Such appliances are distinctively marked “Double-Insulated” or “Double Insulation.”

In cases where the nature or construction of the equipment is such that precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings are marked on the equipment.

Those cleaning machines which have been found suitable for installation outdoors, or with sections exposed outdoors, are so indicated on the equipment.
CLEANING MACHINES, MOTOR OPERATED (DMGK)

USE
This category covers cleaning machines of the motor-operated type for household and commercial use. Products employing liquid cleaning agents are intended for use with water-based (nonflammable) cleaners.

REBUILT PRODUCTS
This category also covers motor-operated cleaning machines that are rebuilt by the original manufacturer. Rebuilt motor-operated cleaning machines are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt motor-operating cleaning machines are subject to the same requirements as new motor-operated cleaning machines.

FACTORS NOT INVESTIGATED
Any health hazards that may be associated with the use of these cleaning machines, such as removal of pathological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Commercial Cartridge-cleaning Workstation
- Household Rechargeable Floor Sweeper
- Jewelry Cleaner
- Shoe Polisher
- Ultrasonic Cleaner
Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

RELATED PRODUCTS
This category does not cover dishwashers, high-pressure cleaning machines, vacuum cleaning machines, blower cleaners, or cleaning machines of the heating type for household and commercial use. See Dishwashers, Commercial (DMGR), Dishwashers, Household (DMIY), High-pressure Cleaning Machines, Electrically Operated (DMKK), High-pressure Cleaning Machines, Engine Driven (DNZW), Vacuum Cleaning Machines and Blower Cleaners (DMLM) and Heaters, Specialty (KSO) for details on these types of cleaning machines.

ADDITIONAL INFORMATION
For additional information, see Cleaning Machines (DMDT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 921, “Commercial Electric Dishwashers.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISHWASHERS, HOUSEHOLD (DMIY)

USE AND INSTALLATION
This category covers household dishwashers intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI Z223/NFPA 54, “National Fuel Gas Code.”

Commercial dishwashers are intended for use in commercial establishments such as kitchens of restaurants, bars and hospitals, where they are not to be accessible to the public.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Commercial Electric Dishwasher
- Dishwasher
- Power Wash Sink
- Sideloader
- Utensil Washer

Other product identities may be used as shown in the individual certifications.

REBUILD PRODUCTS
This category also covers commercial dishwashers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial dishwashers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial dishwashers are subject to the same requirements as new commercial dishwashers.

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 921, “Commercial Electric Dishwashers.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
CLEANING MACHINES (DMDT)

Dishwashers, Household (DMY)—Continued

[natural knowledge and manufacturing skills. Rebuilt household dishwashers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household dishwashers are subject to the same requirements as new household dishwashers.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Household Countertop Dishwasher
- Household Portable Dishwasher
- Household Undercounter Dishwasher

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 749, “Household Dishwashers.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HIGH-PRESSURE CLEANING MACHINES, ELECTRICALLY OPERATED (DMKK)

GENERAL

This category covers electrically operated, high-pressure cleaning machines in which the discharge line is hand-supported and manipulated, that use water as the cleaning agent for household and commercial use.

The products may use either hot or cold water, and they may be portable, stationary or fixed. Per ANSI/NFPA 70, “National Electrical Code,” single-phase products rated 250 V ac or less are either provided with an equipment grounding conductor or terminal and a ground-fault circuit interrupter. Products rated greater than 250 V ac, or more than single phase, are provided with a permanent marking indicating the product is to be connected to a receptacle protected by a ground-fault circuit interrupter. Products used with liquid cleaning agents are intended for water-based (nonflammable) cleaners.

FACTORS NOT INVESTIGATED

Any health hazard that may be associated with the use of these cleaning machines, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- High-pressure Washer
- Pressure Washer

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Fuel-engine-driven, high-pressure cleaning machines are covered under High-pressure Cleaning Machines, Engine Driven (DNZW).

Electrically operated, high-pressure cleaning machines provided with steam-cleaning features, where the high-pressure cleaning function is the appliance’s primary function, are covered under Heaters, Specialty (KSOT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1776, “High-Pressure Cleaning Machines.”

CLEANING MACHINES (DMDT)—Continued

High-pressure Cleaning Machines, Electrically Operated (DMKK)—Continued

Electrically operated, high-pressure cleaning machines provided with steam-cleaning features, where the high-pressure cleaning function is the appliance’s primary function, are additionally investigated to ANSI/UL 489, “Electric Heating Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

VACUUM CLEANING MACHINES AND BLOWER CLEANERS (DMLW)

GENERAL

This category covers coin-operated vacuum cleaners and motor-operated vacuum cleaners and blower cleaners intended for household and commercial (industrial) use. Products intended for household use only are so marked. Attachments packaged with the products or indicated in the instruction manual packaged with the product are also covered under this category.

Central vacuum cleaners are intended for installation as part of a permanent central suction system in a building and investigated for remote operation.

This category also covers household vacuum cleaners provided with a steam-cleaning feature, where the vacuum cleaner is the appliance’s primary function.

This category also covers electrified wall inlet valve assemblies for use in central vacuum cleaning systems. These valve assemblies are intended for installation in accordance with Section 422.15 of ANSI/NFPA 70, “National Electrical Code.” The assemblies are shipped as a kit comprised of the mounting plate/rough-in box and cover plate. The cover plate identifies the appropriate hoses and nozzles certified for use with the valve. The assembly bears the Certification Mark.

REBUILT PRODUCTS

This category also covers vacuum cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vacuum cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vacuum cleaners are subject to the same requirements as new vacuum cleaners.

FACTORS NOT INVESTIGATED

Any health hazards that may be associated with the use of vacuum cleaners or combination blower and vacuum cleaners, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Commercial Vacuum Cleaner
- Double-insulated Blower/Vacuum Cleaner
- Household Battery-operated Blower Cleaner
- Household Vacuum Cleaner
- Motorized Nozzle

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

RELATED PRODUCTS

Steam-cleaning machines with vacuum-cleaning features, where the steam cleaner is the appliance’s primary function, are covered under Heaters, Specialty (KSOT).

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines (DMDT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, “Steam Heaters.”

FACTORS NOT INVESTIGATED

Any health hazards that may be associated with the use of high-pressure cleaning machines, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- High-pressure Cleaning Machines
- Pressure Cleaning Machines

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Fuel-engine-driven, high-pressure cleaning machines are covered under High-pressure Cleaning Machines, Engine Driven (DNZW).

Electrically operated, high-pressure cleaning machines provided with steam-cleaning features, where the high-pressure cleaning function is the appliance’s primary function, are additionally investigated to ANSI/UL 489, “Electric Heating Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Vacuum Cleaning Machines and Blower Cleaners (DMLW) – Continued

The basic standard used to investigate products in this category is ANSI/UL 1017, “Vacuum Cleaners, Blower Cleaners, and Household Floor Finishing Machines.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLEANING MACHINES FOR USE IN HAZARDOUS LOCATIONS (DMRR)

GENERAL

This category covers portable vacuum cleaners provided with special suction attachments, such as crevice tools, brushes, etc., intended to facilitate cleaning operations.

Some vacuum cleaners are designed specifically to pick up water in connection with floor-scrubbing operations; such cleaners are so indicated in the individual certifications.

Connections to supply lines require the use of receptacles with plugs, or receptacles with plugs interlocked with snap switches or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

PRODUCT IDENTITY

The following product identity appears on the product:

Cleaning Machine for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cleaning Machine for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COAXIAL FAULT PROTECTORS FOR NETWORK-POWERED BROADBAND COMMUNICATION SYSTEMS (DUAA)

GENERAL

This category covers coaxial fault protectors intended for use with low-power, network-powered broadband communication systems. These systems are intended to be installed in accordance with Article 830 of ANSI/NFPA 70, “National Electrical Code” (NEC). The protectors are intended to be installed by the public utility company that provides the service. The protectors are intended for use with direct-buried cable systems only.

The units or systems covered in this category are designed to monitor, detect and disconnect network power on the communication cable when a fault condition exists. Network power is disconnected at the utility serving terminal or “tap” end of the direct-buried cable. The protector may only be used with low-power underground cable as described in Article 830 of the NEC.

Buried cable emerging from the ground (finished grade) is intended to be enclosed within conduit as described in Article 830 of the NEC. Those products that employ a subscriber-end module of the coaxial fault protector system are intended to have the module enclosed within a compatible network interface device (NID). The NID is provided with a means to connect conduit.

A current-limiting or extinguishing device or current-limiting or extinguishing component may be employed within the fault protector or may be a separate device or component coordinated externally with the fault protector.

INSTALLATION INSTRUCTIONS

Installation instructions are provided by the manufacturer.

PROTECTION

Products covered under this category protect against the following fault conditions:

1. A short-circuit condition between the coaxial shield and center conductor, and/or
2. An open circuit in the center conductor of the coaxial cable, and/or
3. Leakage current greater than 0.5 mA between the center conductor and cable shield or ground.

PRODUCT IDENTITY

The following product identity appears on the product: Coaxial Fault Protector

RELATED PRODUCTS

See Protectors (QVGG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2389, “Outline of Investigation for Coaxial Fault Protectors for Network-powered Broadband Communication Systems.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Coaxial Fault Protector.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COLD CATHODE TRANSFORMERS AND POWER SUPPLIES (DUEC)

GENERAL

This category covers indoor and outdoor use cold cathode transformers and power supplies for use as part of a cold cathode electric discharge lighting system, sign, field-assembled skeletal neon sign and outline lighting system, or field-installed neon outline lighting system.
These transformers and power supplies have been investigated for the secondary-circuit ground fault protection requirements in ANSI/NFPA 70, “National Electrical Code” (NEC).

**PRODUCT MARKINGS**

Transformers and power supplies covered under this category are marked “Indoors,” “Weatherproof” or “WP.” Products marked “Indoors” are only suitable for use indoors, and products marked “Outdoors” are suitable for use indoors or outdoors sheltered from rain, snow, and the like by being located within a sign body, enclosure and the like. Products marked “Weatherproof” or “WP” do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 4 in association with the location designation “Indoors,” “Outdoors,” “Weatherproof” or “WP.” These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** – Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 3** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 4** – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AAI).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Cold Cathode Power Supply
- Cold Cathode Transformer

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAI).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 2161, “Neon Transformers and Power Supplies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Combustion Detection Equipment for Use in Hazardous Locations” or “Combustion Detector for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMBUSTION-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (DUFK)**

This category covers electronically operated combustion-detection equipment intended for use on gas- or oil-burning equipment. The equipment functions covered by this category include combustion detection with controls for an ignition system, combustion detection without controls for an ignition system, and just the controls for an ignition system.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Combustion-detection Equipment for Use in Hazardous Locations
- Combustion Detector for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAI).

**COMBUSTION-DETECTION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (DUFQ)**

**USE**

This category covers electronically operated combustion-detection equipment intended for use on gas- or oil-burning equipment. The equipment functions covered by this category include combustion detection with controls for an ignition system, combustion detection without controls for an ignition system, and just the controls for an ignition system.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Combustion-detection Equipment for Use in Hazardous Locations
- Combustion Detector for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAANZ).

**REQUIREMENTS**

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 372, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Burner Ignition Systems and Components,” and ANSI/UL 60730-1, “Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements.” The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAANZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
COMMUNICATION, COAXIAL AND BROADBAND CABLE ASSEMBLIES (DUNH)

USE AND INSTALLATION
This category covers factory-assembled communication, coaxial and broadband cable assemblies that are comprised of certified communication, coaxial and broadband cables and cable connectors suitable for the application. They are intended for use in residential and/or commercial applications as connected premises wiring. These assemblies are intended for installation in accordance with Chapter 8 of ANSI/NFPA 70, "National Electrical Code." Restrictions that apply to these assemblies, according to the articles in this chapter, also apply to the complete cable assemblies. The connectors employed in these assemblies have not been investigated for use under carpet. These cable assemblies are suitable for the same applications as the certified cable with which they are constructed. For example, a cable assembly utilizing CMR, CATVR, BLR or BMR cable is suitable for use in riser applications.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Broadband Cable Assembly
- Coaxial Cable Assembly
- Communication Cable Assembly

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 1863, “Communications Circuit Assemblies,” ANSI/UL 444, “Communications Cables,” ANSI/UL 1655, “Community-Antenna Television Cables,” and/or the requirements contained in UL Subject 2261, Outline of Investigation for Cables for Network-Powered Broadband Communications Systems.

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Broadband Cable Assembly," "Coaxial Cable Assembly" or "Communication Cable Assembly.

COMMUNICATIONS-, AUDIO/VIDEO-, DATA- AND OTHER SIGNALING-CIRCUIT ACCESSORIES (DUXR)

GENERAL
This category covers devices intended for use in residential or commercial communications-station applications for connections to a communications circuit as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC). They are referred to as "communications-circuit accessories." This category also covers connectors, interconnecting cables, splitters and similar passive devices for metallic connections to audio/video, data and other low-voltage signalling circuits. They are referred to as "audio/video, data- and other signalling-circuit accessories." Communications-circuit Accessories Communications-circuit accessories have been investigated for use on communications circuits that have an operating root-mean-square (rms) voltage to ground less than 130 V and installed or used in accordance with the NEC. Unless otherwise specified in the individual certifications, current-carrying accessories such as connectors, line cords, splitters and the like are suitable for communications-powering applications not exceeding 60 V dc, 1.3 A. These accessories have also been investigated for 600 V ac fault currents up to 2.2 A for a period of 30 minutes and 7 A for a period of 5 seconds.

PRODUCT IDENTIFICATION
One of the following product identities appears on the product:
- For Communications-circuit Accessories
  - Comm Ckt Acc
  - Communications-circuit Accessory

For Audio/Video-, Data- and Other Signaling-circuit Accessories
The appropriate product identity as shown in the individual certifications together with the words "Audio," "Video," "Data," "Signal," or "Signaling" or a functional descriptor such as "HDMI," "USB," "Ethernet" (e.g., "HDMI Cable Assembly," "Audio Jack Wallplate Assembly").

RELATED EQUIPMENT
Other telecommunications appliances and equipment are covered under Telephone Appliances and Equipment (WYQ), Telephones, Cellular (WYLR) or Information Technology Equipment Including Electrical Business Equipment (NWQ).
Modular assemblies of telecommunications equipment (e.g., racks, circuit card assemblies) that are designed for field installation by trained service personnel are covered under Custom-built Telecommunications Equipment (WyKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communications companies is covered under Communications Service Equipment (DU0Q).

Factory-assembled optical fiber cable assemblies and factory/field-installed optical fiber connector products intended for residential and/or commercial applications as part of an optical fiber wiring system without active optical transceivers are covered under Optical Fiber Cable Assemblies and Connectors (QFDA).

Optical active cable assemblies that incorporate active optical transceivers in the connectors are covered under Active Optical Cable Assemblies (QBDV).

Active connectors such as those that incorporate active optical transceivers are covered under Information Technology Equipment Including Electrical Business Equipment (NWQGQ) or High-technology Components (A2Q2F).

Cable assemblies with copper conductors or hybrid cable constructions without active optical transceivers intended for use in residential and/or commercial applications as connected premises wiring and intended for installation in accordance with Chapter 8 of the NEC are covered under Communications, Coaxial and Broadband Cable Assemblies (DUN4).

Computer interconnection cable assemblies without active optical transceivers intended for installation between units of electronic equipment where the cable is outside of the equipment enclosure and within the computer room as defined in Article 645 of the NEC are covered under Computer Interconnection Cable Assembly (KDSH).

Devices whose sole purpose is the grounding of coaxial and communications circuits in accordance with Chapter 8 of the NEC are covered under Grounding and Bonding Equipment, Communication (KDSH).

Cabinet, enclosure and frame systems that are not complete in accordance with Articles 770, 800 and 820 of the NEC.
INTERFACE EQUIPMENT

A subscriber interface unit (SIU), network interface unit (NIU) or network interface device (NID) is used to provide telecommunications, CATV, and other signal information to the subscriber premises and isolation between the Class 3 power on the cable drop and the subscriber premises signal circuits. An interface may incorporate two separate compartments, one compartment for network connections and components, and another compartment for the subscriber connection terminals and standard jacks. Each individual interface certification provides the following information: Interface designation, primary protector provisions, compatible primary protectors, fusing information and indoor or outdoor environmental use specifications. Primary protector provisions and fusing information are marked on the interface.

TAP EQUIPMENT

A power-passing tap (PPT) or power-passing multi-tap (PPMT) is used to tap both signal and Class 3 power from the main utility network for the subscriber cable drop. This tap may be located on a utility pole, within a utility owned equipment pedestal or vault, or similar location in accordance with ANSI C2. In addition to coupling the signal circuits from the network to the cable drop, the tap limits power on the cable drop to Class 3 Levels with a maximum voltage of 100 V. Unless otherwise noted in the individual certifications, taps using communications cables for cable drops have been investigated for subscriber cable drops not exceeding 500 ft in length. Each individual tap certification provides the following information: Tap designation, voltage rating, power-carrying media, primary protector provisions, compatible primary protectors, fusing information and indoor or outdoor environmental use specification.

OTHER EQUIPMENT

Other equipment may contain features that are unique to a system or application. Information concerning special installation procedures, compatibility and other important design features are provided in the individual certifications, on product markings, on product data sheets and in utility installation practices.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Communications Service Equipment
- Network Interface Device
- Network Interface Unit
- NIU
- Power-passing Multi-Tap
- Power-passing Tap
- PPMT
- PPT
- SIU
- Subscriber Interface Unit
- Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 497, “Protectors for Paired-Conductor Communications Circuits,” UL 1459, “Telephone Equipment,” and UL 1950, “Information Technology Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided on the product to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Subscriber Interface Unit” (or “SIU”), “Network Interface Unit” (or “NIU”), “Network Interface Device” (or “NID”), “Power Passing Tap” (or “PPT”), “Power Passing Multi-Tap” (or “PPMT”) or, for other equipment, “Communication Service Equipment,” with or without an appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

COMMUNICATIONS CABLE (DUZX)

USE AND INSTALLATION

This category covers communications cable which is a single conductor coaxial cable or a multiple conductor jacketed cable for telephone and other communications circuits for use as described in Article 800 of ANSI/NFPA 70, “National Electrical Code” (NEC).

This cable is used as wiring from a protector to a telephone or other communications equipment within a building, and for use as interconnecting wiring between parts of a communications system. Except for special locations specifically required by the NEC, communications cable, in general, is not required to be installed in conduit or raceway.

PRODUCT MARKINGS

Communications cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

- CMP — Indicates cable intended for general use within buildings in accordance with Section 800.154(E)(1) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, “Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.”
- CM — Indicates cable intended for general use within buildings in accordance with Section 800.154(E)(1) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test in UL 1685.
- CMR — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 800.154(A) of the NEC. This cable may be used in ducts or plenums where the maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft, when tested per ANSI/NFPA 262, “Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.”
- CMX — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 800.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, “Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.”
- CMI — Indicates cable intended for use within buildings in accordance with Section 800.154(E)(6) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, “Reference Standard for Electrical Wires, Cables, and Flexible Cords.”
- CMUC — Indicates cable intended for use in ducts and flexible cord media in accordance with ANSI/UL 1581, “Reference Standard for Electrical Wires, Cables, and Flexible Cords.”
- CMX — Indicates cable intended for use within buildings in accordance with Section 800.154(E) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with Section 800.154(A) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

PRODUCT IDENTIFICATION

The following product identity appears on the product:

- Communications Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497, “Communications Cables.”

UL MARK

LOOK FOR THE UL MARK ON PRODUCT
The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier (if applicable), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Communications Cable.”

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMUNICATIONS CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBG)**

**LOCAL AREA NETWORK CABLE VERIFIED FOR TRANSMISSION PERFORMANCE IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBI)**

**GENERAL**

This category covers local area network (LAN) cable whose signal transmission characteristics have been determined to be in accordance with one of the specifications shown below or other national or international data transmission performance specifications.

Both Listed and non-Listed LAN cable can be investigated for data transmission performance.

**Listed Cable** – Listed cable has additionally been investigated in accordance with ANSI/UL 444, “Communications Cable” (e.g., as Type CMP, CMR, CM, CMX), and is for use in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). For additional information, see Communications Cable (DUZX).

**Non-Listed Cable** – Non-Listed cable has not been investigated in accordance with ANSI/UL 444 and is for use where the NEC does not apply.

This cable has only been investigated for data transmission performance.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Use for Ordinary Locations (AALZ).

**REQUIREMENTS AND SURFACE-PRINT MARKINGS**

**Listed and Verified Cable**

Listed cable employing a stranded conductor that is additionally marked “Verified (UL) Category 3, 5, 6 or 6A” has been investigated in accordance with ISO/IEC 11801. “Information Technology – Generic Cabling Systems – Part 1: General Requirements.”

Listed cable employing a stranded conductor is marked “Verified (UL) Category 3, 5, 6 or 6A” and “SAFETY.”

Listed cable employing a solid conductor that is additionally marked “Verified (UL) Category 3, 5, 6 or 6A” has been investigated in accordance with ISO/IEC 11801. “Information Technology – Generic Cabling Systems – Part 1: General Requirements.”

Listed cable employing a solid conductor is marked “Verified (UL) Category 3, 5, 6 or 6A” and “SAFETY.”
COMMUNITY ANTENNA TELEVISION CABLE (DVCS)

**USE AND INSTALLATION**

This category covers community antenna television cable for use in accordance with Article 820 of ANSI/NFPA 70, “National Electrical Code” (NEC).

**PRODUCT MARKINGS**

Community antenna television cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

- **CATVP** — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 820.179(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 5 ft when tested per ANSI/NFPA 262.
- **CATVR** — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 820.179(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, “Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.”
- **CATV** — Indicates cable intended for general use within buildings in accordance with Section 820.179(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Trajectory Flame Test in ANSI/UL 1685, “Vertical-Trajectory Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.”
- **CATVX** — Indicates cable intended for limited use within buildings (1) where the cables are enclosed in raceway or enclosed in raceway tubing, (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) installed in one- or two-family or multifamily dwellings when the cable diameter is less than 0.375 in. in accordance with Section 820.179(D) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

**COMMUNICATIONS CABLE Verified in Accordance with National or International Specifications (DVDBG)**

Non-Listed cable that is marked “Verified by Underwriters Laboratories Inc. in accordance with [Specification name and/or number and category performance number] Only” complies with the requirements of the transmission performance specification referenced in this marking. This print legend may be abbreviated as “Verified by Und Lab Inc Only to [Specification name and/or number and category performance number].”

**UL MARK**

- **Listed and Verified Cable**
  - The required surface markings on the product as described above and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the DUVXZ Listing Mark and the statement “Verified in Accordance with [Specification name and/or number].”
  - The Verification Mark for this category requires the use of a holographic label.

- **Verified Only (Non-Listed) Cable**
  - The required surface markings on the product as described above and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “VERIFIED,” a control number, the product name “Data Transmission Cable,” and the Specification name and/or number.
  - The Verification Mark for this category requires the use of a holographic label.

**PRODUCT IDENTIFICATION**

- **The following product identity appears on the product:**
  - **Community Antenna Television Cable**
  - **Additonal Information**
    - For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

- The basic standard used to investigate products in this category is ANSI/UL 1655, “Community Antenna Television Cables.”

**COMMUNITY ANTENNA TELEVISION CABLE (DVCS)**

- **UL MARK**
  - The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
  - The Certification Mark for this category requires the use of a holographic label.

- **Alternate UL Mark**
  - The UL symbol on the product and the Listing Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Community Antenna Television Cable.”
  - The Listing Mark for this category requires the use of a holographic label.

**COMPUTER INTERCONNECTION CABLE ASSEMBLIES (DVPJ)**

**USE AND INSTALLATION**

This category covers computer interconnection cable assemblies intended for installation between units of electronic equipment where the cable is inside of the equipment enclosure and within the computer room as defined in Article 645 of ANSI/NFPA 70, “National Electrical Code.” These cable assemblies may also be used in an office environment where the cable is visible after installation.

**PRODUCT IDENTIFICATION**

- **The following product identity appears on the product:**
  - **Computer Interconnection Cable Assembly**
  - **Additonal Information**
    - For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

**UNIT MARK**

- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

- **Alternate UL Mark**
  - The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and the product name “Computer Interconnection Cable Assembly.”

**PRODUCT IDENTIFICATION**

- **The following product identity appears on the product:**
  - **Wiring Material**
  - **Additonal Information**
    - For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

- The basic standards used to investigate products in this category are ANSI/UL 1609, “Wiring Material.”

- **Requirements**
  - The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**LOOK FOR THE UL MARK ON PRODUCT**
CONDUIT TERMINATION COMPoSITIES (DVFV)

USE

This category covers conductor termination compounds for use on splice and termination connections of aluminum, copper-clad aluminum and copper conductors where used to retard oxidation at the conductor/connector interface. These compounds do not have a deleterious effect on the conductor metal, insulation or equipment when used in accordance with the manufacturer’s installation instructions.

Reference should be made to the product label located on the smallest unit container for specific instructions as to the proper use of the compound.

PRODUCT IDENTITY

The following product identity appears on the product:

Conductor Termination Compound

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 546, “Outline of Investigation for Conductor Termination Compounds.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Conductor Termination Compound.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDUIT AND FITTINGS (DWFV)

CONDUIT AND CABLE HARDWARE (DWMU)

GENERAL

This category covers conduit straps, staples, and similar types of hardware for installation and use in wiring systems in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), and the manufacturer’s installation instructions and the following information.

The mechanical strength of these products is investigated with consideration given to the intended installation. Metallic devices are also investigated for resistance to corrosion, and nonmetallic devices may be for flammability and exposure to elevated or cold temperatures.

CARTON MARKINGS

The product carton for a metallic construction of any conduit and cable hardware that is intended for use in spaces used for environmental air is marked “Suitable for use in Air-Handling Spaces in accordance with Section 300.22(B), (C) and (D) of the NEC.”

The product carton for a construction made of polymeric material of any conduit and cable hardware that is intended for use in spaces used for environmental air is marked “Suitable for use in Air-Handling Spaces in accordance with Section 300.22(C) and (D) of the NEC.”

The product made of polymeric material that is suitable where exposed to rain is so indicated on the device or carton. The term “Wet Location” on the device or carton indicates suitability for use where directly exposed to rain.

Products intended for use at elevated or cold temperatures (above 90°C or below -5°C) are so indicated on the device or carton. The application temperature on the device or carton indicates suitability for use at the extended temperature range.

The following, where applicable, is marked on the carton or installation instructions provided on or in the carton:

1. Types or range of thicknesses of a beam flange, drop wire or rod
2. Intended mounting orientations, if restricted (for example, vertical or horizontal)
Conduit Fittings (DWTT)−Continued

Insulating Bushings — Insulating bushings provided either separately or as part of a fitting are suitable for temperatures of 150°F if they are colored black or brown, and for 90°C if any other color unless specifically marked for a higher temperature.

Volume — Fittings or covers for fittings should be judged to contribute no volume other than the equivalent raceway connected to it unless specifically marked.

Sealing (Liquid-tight) Locknuts — Sealing locknuts are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing locknut in the outside or the inside and either an ordinary locknut or sealing locknut on the inside of the enclosure for wet locations or liquid-tight applications. Sealing locknuts may also be used with certified wet location or liquid-tight fittings where so marked on the fitting carton and used on the inside of the enclosure.

Reusable — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

CARTON MARKINGS

Fittings for use with electrical metallic tubing (adapters), unthreaded rigid metallic, intermediate metallic conduit or threaded couplings which split to fit over the ends of threaded rigid metal or intermediate metal conduit and then are bolted in place have been tested only for use with steel conduit or tubing unless marked on the fitting or carton to indicate suitability for use with aluminum or other material.

A fitting that is taped completely (from the raceway to the box, or raceway to raceway) is concrete-tight when the product carton is marked “CONCRETE-TIGHT WHEN TAPED.”

Fittings for use with flexible metal conduit have been tested only for use with the type of conduit marked on the carton. The carton may be marked “FM” for all six types of flexible metal conduit, or may also be marked “FE,” “AL,” “FERW,” “ALRW,” “FEXRW” or “ALXRW” in any combination for any combination of the six types of flexible metal conduit.

Flexible metal conduit fittings for use with conduit less than 1/2 (16) trade size, having an end stop that does not completely encircle the end of the conduit, will have the carton marking “Armed Cable Bushing Required on Flexible Metal Conduit,” or will indicate to use another type of bushing. This bushing will provide protection to the conductors as they exit the conduit into the electrical enclosure.

Threadless conduit fittings suitable for use in concrete or where exposed to the weather are identified by a marking on the carton. Aluminum fittings are not considered suitable for use in concrete or cinder fill unless protected with an asphalt paint or the equivalent.

All liquid-tight fittings are identified on the carton as “Liquid-Tight.” The term “Liquid-Tight” on the carton indicates suitability for use where directly exposed to oil spray or to rain. A liquid-tight fitting is usable in wet locations and is also rain-tight and concrete-tight.

A metallic fitting that physically cannot be connected to any type of conduit other than liquid-tight flexible metallic or nonmetallic Type B conduit can have the marking on carton in which the fitting is packed. It is marked “Liquid-Tight Flexible Nonmetallic Conduit Type B Only,” “LFNC-B” or “FMNC-B.”

Fittings identified with an enclosure type designation or as rain-tight or liquid-tight on the carton are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Connectors that are also suitable for use with power and control tray cable, nonmetallic-sheathed cable, service-entrance cable, or flexible nonmetallic tubing are so identified by the appropriate marking on the carton. Connectors designated “For Use With Nonmetallic Sheathed Cable” are also suitable for use with multicore underground feeder and branch-circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry. Hubs intended for use with conduit that serves as a service mast in accordance with the NEC are marked on the fitting or carton to indicate suitability for use with service-entrance equipment.

GROUNDING

All metal fittings for metal cable, conduit and tubing are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC, except as noted for flexible metal conduit fittings and liquid-tight flexible metal conduit fittings.

FITTINGS

Flexible Metal Conduit Fittings — Flexible metal conduit fittings designed for connection to the conduit by clamping around the circumference of the conduit are considered suitable for grounding for use in circuits over and under 250 V and when used in accordance with the NEC and containing conductors protected by overcurrent devices rated 20 A or less. Flexible metal conduit fittings of types other than the clamping type mentioned previously in the 3/8 through 3/4 in. trade size and containing conductors protected by overcurrent devices rated 20 A or less are considered suitable for grounding when used in accordance with the NEC. All other trade sizes that have been investigated for grounding are marked “GRND” or the equivalent.

Liquid-tight Flexible Metal Conduit Fittings — Liquid-tight flexible conduit fittings in the 1-1/4 in. and smaller trade sizes are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC. A straight metallic fitting for use in direct contact with earth is marked “Direct Burial.”

Liquid-tight Flexible Nonmetallic Conduit Fittings — Liquid-tight flexible nonmetallic conduit fittings are marked as follows:

1. A fitting for Type A conduit only is marked “Liquid-Tight Flexible Nonmetallic Conduit Type A Only,” “LFNC-A only” or “FMNC-A only.”
2. A metallic fitting for Type B is marked “Liquid-Tight Flexible Nonmetallic Conduit Type B Only,” “LFNC-B” or “FMNC-B.”
3. A nonmetallic fitting for Type B conduit only is marked “Liquid-Tight Flexible Nonmetallic Conduit Type B Only,” “LFNC-B only” or “FMNC-B only.”
4. A nonmetallic fitting for Type C conduit only is marked “Liquid-Tight Flexible Nonmetallic Conduit Type C Only,” “LFNC-C only” or “FMNC-C only.”
5. A straight nonmetallic or metallic fitting for use in direct contact with earth is marked “Direct Burial.”

Nonmetallic Fittings — Nonmetallic fittings suitable for use with rigid polyvinyl chloride conduit, high-density polyethylene conduit or reinforced thermosetting resin conduit are identified by the appropriate marking on the carton. Such fittings are inherently resistant to attack from industrial corrosive agents and will also withstand vapors or mists of caustic, pickling, acids, plating baths, hydrofluoric, and chromic acids. Fittings that have been investigated for exposure to other reagents may be identified by the designation “Reagent Resistant” printed on the surface of the fittings.

Special uses are described in greater detail in the individual carton markings or instructions packed with the device. Nonmetallic fittings for use with rigid PVC conduit are suitable with wires rated 90°C or less.

PVC Conduit Fittings — All PVC conduit fittings are designed for connection to both Schedule 40 and 80 PVC conduit by the use of suitable solvent-type cement. Instructions supplied by the solvent-type-cement manufacturer describe the method of assembly and precautions to be followed.

Threadless Fittings — Threadless fittings for use with electrical metallic tubing, rigid metal conduit, intermediate metal conduit or threaded couplings which split to fit over the ends of threaded rigid metal or intermediate metal conduit and then are bolted in place are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

Additional Fittings — For additional certifications of conduit fittings, see: Outlet Bushings and Fittings (QCRV)

Nonmetallic-sheathed Cable Connectors (PXIV)

Insulating Bushings (NZMT)

Rigid Ferrous Metal Conduit (DYDX)

Intermediate Ferrous Metal Conduit [for elbows] (DDBY)

Armored Cable Connectors [for connectors which may also be suitable for use with flexible cord, flexible metal conduit and metal-clad (Type MC) cable] (AWSX)

PRODUCT IDENTITY

One of the following product identities appears on the product:

Adapter

Conduit Fitting

Coupling

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

A hub having provision for attachment of a grounding conductor may additionally be considered suitable for grounding and bonding hub under Grounding and Bonding Equipment (KDER).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514B, “Conduit, Tubing, and Cable Fittings,” and ANSI/UL 651, “Conduit Fittings and 80 Rigid PVC Cable Conduit.” Products that employ ANSI/UL 514B are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products investigated to ANSI/UL 514B are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification.

and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Conduit Fitting,” “Adapter” or “Coupling,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Fitting Kits Certified for Use with Extruded Rigid PVC Conduit (DWUC)

USE

This category covers certified retrofit fitting kits certified for use with extruded rigid nonmetallic PVC Schedule 40 conduit. These kits are intended only for truncating conduit in concrete. They are not intended for use with conduit in open air.

The kits are provided with the tools and instructions necessary for proper installation. Separate fittings intended for use with the tools may be sold separately. The kit and installation instructions are marked “PVC Conduit Repair Fitting,” or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Conduit Fittings (DWTT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 651, “Schedule 40 and 80 Rigid PVC Conduit.”

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

RETROFIT FITTING KIT FOR USE WITH RIGID NONMETALLIC PVC SCHEDULE 40 CONDUIT

Alternate UL Mark

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Flexible Conduit, Liquid-tight (DWWY)

Flexible Metal Conduit Assemblies, Liquid-tight (DXAS)

Flexible Metal Conduit Assemblies, Liquid-tight (DXAS)—Continued

and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Conduit Fitting,” “Adapter” or “Coupling,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flexible Metal Conduit, Liquid-tight (DXHR)

USE AND INSTALLATION

This category covers liquid-tight flexible metal conduit in trade sizes 3/8 to 4 (metric designators 12 to 103) inclusive, for installation in accordance with Article 350 of ANSI/NFPA 70, “National Electrical Code” (NEC). This product may also be used for installation of conductors in motor circuits, and for electric signs and outline lighting in accordance with the NEC.

Liquid-tight flexible metal conduit assemblies consist of a length of liquid-tight metal conduit terminated at each end with a permanently attached connector.

Liquid-tight flexible metal conduit assemblies are suitable for use in certain hazardous (classified) locations as permitted in the NEC.

Liquid-tight flexible metal conduit assemblies are sunlight resistant and suitable for use outdoors.

Where terminated in fittings investigated for grounding and where installed with not more than 6 ft (total length) in any ground return path, liquid-tight flexible metal conduit in the 3/8 and 1/2 (12 and 16) trade sizes is suitable for grounding where used on circuits rated 20 A or less and the 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes are suitable for grounding where used on circuits rated 60 A or less.

All male threaded fittings have only been investigated for use with locknuts.

The following are not considered to be suitable as a grounding means:

1. The 1-1/2 (41) and larger trade sizes.
2. The 3/4 and 1/2 (12 and 16) trade sizes where used on circuits rated higher than 20 A or where the total length in the ground return path is greater than 6 ft.
3. Liquid-tight flexible metal conduit in the 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes where used on circuits rated higher than 60 A, or where the total length in the ground return path is greater than 6 ft.

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Flexible-tight Flexible Metal Conduit Assembly

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 360, “Liquid-Tight Flexible Metal Conduit,” and ANSI/UL 514B, “Conduit, Tubing, and Cable Fittings.” Products that employ ANSI/UL 514B are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products investigated to ANSI/UL 514B are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Liquid-tight Flexible Metal Conduit Assembly.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Flexible Metal Conduit, Liquid-tight—Continued

2. The 3/8 and 1/2 (12 and 16) trade sizes where used on circuits rated higher than 20 A, or where the total length in the ground-return path is greater than 6 ft.
3. The 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes where used on circuits rated higher than 60 A, or where the total length in the ground-return path is greater than 6 ft.

PRODUCT MARKINGS

Liquid-tight flexible metal conduit suitable for direct burial is marked "Direct Burial," “Burial,” or “Dir Burial.”

Liquid-tight flexible conduit not marked with a temperature designation or marked "60 C” is intended for use at temperatures not in excess of 60°C (140°F).

Conduit intended for use in dry or oily locations at a temperature higher than 60°C (140°F) is marked “___C dry, 60 C wet, 70 C oil res” (or “___C dry, 60 C dry, 60 C oil resistant”) with “80” or "105" inserted as the dry-locations temperature.

Conduit marked “80 C dry, 60 C wet, 60 C oil res” or “80 C dry, 60 C oil resistant” is intended for use at 80°C (176°F) and lower temperatures in air, and at 60°C (140°F) and lower temperatures where exposed to water, oil or coolants.

Conduit that has not been investigated for use where exposed to oil is marked “OIL-FREE ENVIRONMENTS ONLY.”

PRODUCT IDENTITY

The following product identity appears on the product: Liquid-Tight Flexible Metal Conduit

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 360, “Liquid-Tight Flexible Metal Conduit.”

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Liquid-Tight Flexible Nonmetallic Conduit,” “LFNCA,” “LFN CB” or “LFNC-C.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flexible Nonmetallic Conduit, Liquid-tight—Continued

This category covers liquid-tight flexible nonmetallic conduit, in trade sizes 3/8 in. to 4 (12 to 103) inclusive, flexible aluminum and steel conduit Type RW (reduced wall), flexible aluminum and steel conduit Type XRW (extra reduced wall) in trade sizes from 3/8 to 3 (16 to 78) inclusive, for installation in accordance with Article 346 of ANSI/NFPA 70, “National Electrical Code” (NEC). This product may also be used for installation of conductors in motor circuits, electric signs and outline lighting in accordance with the NEC.

Flexible metal conduit (steel or aluminum) should not be used underground (directly buried or in duct which is buried) or embedded in poured concrete or aggregate, or in direct contact with earth or where subjected to corrosive conditions. In addition, flexible aluminum conduit should not be installed in direct contact with masonry in damp locations.

For flexible metal conduit in 1-1/4 (35) trade size and smaller, where terminated in fittings investigated for grounding and where installed with not more than 6 ft (total length) in any ground-return path, flexible metal conduit is suitable for grounding where used on circuits rated 20 A or less. See Conduit Fittings (DWTI) with respect to fittings suitable as a grounding means.

The following are not considered to be suitable as a grounding means:

1. The 1-1/2 (41) and larger trade sizes.
2. The 1-1/4 (35) trade size and smaller where used on circuits rated higher than 20 A, or where the total length in the ground-return path is greater than 6 ft.

To prevent possible damage to flexible aluminum conduit, flexible aluminum and steel conduit Types RW and XRW, care must be exercised when installing connectors employing direct bearing set screws.

PRODUCT MARKINGS

Flexible metal conduit is marked at intervals of not more than one ft with the letters “AL.”

Flexible aluminum conduit Type RW is marked at intervals of not more than one ft with the letters “AL” and “RW.”

Flexible steel conduit Type RW is marked at intervals of not more than one ft with the letters “RW.”

FLEXIBLE METAL CONDUIT (DXUZ)

USE

This category covers flexible aluminum and steel conduit in trade sizes 3/8 in. to 4 (metric designators 12 to 103) inclusive, flexible aluminum and steel conduit Type RW (reduced wall), flexible aluminum and steel conduit Type XRW (extra reduced wall) in trade sizes from 3/8 to 3 (16 to 78) inclusive, for installation in accordance with Article 346 of ANSI/NFPA 70, “National Electrical Code” (NEC). This product may also be used for installation of conductors in motor circuits, electric signs and outline lighting in accordance with the NEC.

Flexible metal conduit (steel or aluminum) should not be used underground (directly buried or in duct which is buried) or embedded in poured concrete or aggregate, or in direct contact with earth or where subjected to corrosive conditions. In addition, flexible aluminum conduit should not be installed in direct contact with masonry in damp locations.

For flexible metal conduit in 1-1/4 (35) trade size and smaller, where terminated in fittings investigated for grounding and where installed with not more than 6 ft (total length) in any ground-return path, flexible metal conduit is suitable for grounding where used on circuits rated 20 A or less. See Conduit Fittings (DWTI) with respect to fittings suitable as a grounding means.

The following are not considered to be suitable as a grounding means:

1. The 1-1/2 (41) and larger trade sizes.
2. The 1-1/4 (35) trade size and smaller where used on circuits rated higher than 20 A, or where the total length in the ground-return path is greater than 6 ft.

To prevent possible damage to flexible aluminum conduit, flexible aluminum and steel conduit Types RW and XRW, care must be exercised when installing connectors employing direct bearing set screws.

PRODUCT MARKINGS

Flexible metal conduit is marked at intervals of not more than one ft with the letters “AL.”

Flexible aluminum conduit Type RW is marked at intervals of not more than one ft with the letters “AL” and “RW.”

Flexible steel conduit Type RW is marked at intervals of not more than one ft with the letters “RW.”
Intermediate Ferrous Metal Conduit (DYBY)–Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Intermediate Metal Conduit” (or “IMC”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RIGID FERROUS METAL CONDUIT (DYIX)

USE AND INSTALLATION

This category covers rigid ferrous metal conduit that includes standard 10 ft. lengths of straight conduit, with a coupling, special lengths either shorter or longer, with or without a coupling for specific applications or uses, elbows, and nipples in trade sizes 3/8 to 6 (metric designators 12 to 155) inclusive, for installation in accordance with Article 344 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Corrosion Protection and Coatings

Galvanized rigid steel conduit installed in concrete does not require supplementary corrosion protection.

Galvanized rigid steel conduit installed in contact with soil does not generally require supplementary corrosion protection.

In the absence of specific local experience, soils producing severe corrosive effects are generally characterized by low resistivity (less than 2000 ohm-centimeters).

Wherever ferrous metal conduit runs directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

Conduit that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.

Nonmetallic outer coatings of greater than 0.010-in. thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings and electrical continuity of the connection of conduit to fittings.

Conduit with nonmetallic coatings has not been investigated for use in ducts, plenums, or other environmental air spaces in accordance with the NEC.

Rigid metal conduit with or without a nonmetallic coating has not been investigated for severely corrosive conditions.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Electrical Rigid Metal Conduit
- ERMC-S

RELATED PRODUCTS

Fittings for use with unthreaded intermediate ferrous metal conduit are covered under Conduit Fittings (DWFT) and are suitable only for the type of conduit indicated by the marking on the carton.

Other certifications for elbows are covered under Conduit Fittings (DWFT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6, “Electrical Rigid Metal Conduit – Steel.”
Rigid Ferrous Metal Conduit (DYIX)—Continued

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Rigid Metal Conduit" (or "ERMC-").

********************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RIGID FERROUS METAL CONDUIT WITH POLYVINYL CHLORIDE COATING VERIFIED FOR PVC ADHESION PERFORMANCE (DYJC)

SCOPE

This category covers Listed rigid ferrous metal conduit with an external coating of polyvinyl chloride (PVC) that has additionally been Verified for PVC adhesion performance.

REQUIREMENTS

The requirements used to investigate conduit covered under this category are indicated in the individual Verifications.

This conduit is Complementary Listed to Rigid Ferrous Metal Conduit (DYID).

MARKING

The authorized marking by UL on the product is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The marking for these products includes the following:

ELECTRICAL RIGID METAL CONDUIT WITH POLYVINYL CHLORIDE (PVC) COATING VERIFIED FOR PVC ADHESION PERFORMANCE VERIFIED BY UL

********************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REINFORCED THERMOSETTING RESIN CONDUIT (DZKT)

USE AND INSTALLATION

This category covers reinforced thermosetting resin conduit and fittings intended for installation in accordance with Article 355 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Reinforced thermosetting resin conduit is certified in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, in IPS and ID dimensions, and in trade sizes 3/4 to 6 (metric designators 21 to 155) inclusive, in WX dimensions as marked on the product. Certification includes straight conduit, elbows, and other fittings, unless otherwise noted.

Reinforced thermosetting resin conduit has been investigated for use at -40°C (-40°F) to 110°C (230°F).

Reinforced thermosetting resin conduit is designed for connection to couplings, fittings and boxes by use of a suitable epoxy-type cement or drive-on bell and spigot. Instructions supplied by the epoxy-type-cement manufacturer describe the method of assembly and precautions to be followed.

The conduit is designated “EB” (Encased Burial) or “DB” (Direct Burial), which refers to specific wall thicknesses. EB conduit is suitable for encasement in concrete. DB conduit is suitable for encasement in concrete and direct burial. Conduit marked “Below Ground” (or “BG”) has been investigated for underground use only — for direct burial, with or without being encased in concrete.

Conduit marked “Above Ground” (or “AG”) has been investigated for use aboveground, underground and for direct burial with or without encasement in concrete. This conduit has been investigated for concealed or exposed work where not subject to physical damage. The conduit is designated “SW” (Standard Wall) or “HW” (Heavy Wall), which refers to specific wall thicknesses.

XW-type reinforced thermosetting resin conduit, which refers to specific wall thicknesses, is certified as suitable for use where exposed to physical damage in accordance with the NEC and is suitable for use whenever IPS and ID conduit may be used. The marking “AG, XW, RTRC” identifies conduit suitable for aboveground use and use where exposed to physical damage in accordance with the NEC.

Reinforced thermosetting resin conduit, elbows and other fittings investigated for direct exposure to reagents are identified by the designation “Reagent Resistant” and are marked to indicate the specific reagents.

ERMC-RB
ERMC-SS

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6A, “Electrical Rigid Metal Conduit – Aluminum, Red Brass, and Stainless Steel.”
Reinforced Thermosetting Resin Conduit (DZKT) – Continued

The basic standards used to investigate products in this category are ANSI/UL 2420, “Belowground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings,” ANSI/UL 2515, “Aboveground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings,” and ANSI/UL 2515A, “Supplemental Requirements for Extra Heavy Wall Reinforced Thermosetting Resin Conduit (RTRC) and Fittings.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Reinforced Thermosetting Resin Conduit” (or “RTRC”), “Conduit Fitting,” “Adapter,” “coupling,” or other name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Rigid Nonmetallic Cellular Core Schedule 40 and Schedule 80 PVC Conduit (DZLR)

This category covers rigid nonmetallic cellular core Schedule 40 and Schedule 80 PVC conduit, including straight conduit in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, intended for installation and use as rigid nonmetallic raceway for conductors and cable in accordance with Article 352 of ANSI/NFPA 70, “National Electrical Code” (NEC). This conduit is intended for installation and use in accordance with the following information.

Rigid nonmetallic Schedule 40 conduit is suitable for aboveground use indoors or outdoors exposed to sunlight and weather where not subject to physical damage, and for underground use by direct burial or encasement in concrete. Schedule 40 conduit marked “Underground Use Only” is only suitable for underground applications. Schedule 40 conduit has a reduced cross-sectional area available for wiring space and is suitable for use wherever Schedule 40 conduit may be used. The marking “Schedule 80 PVC” identifies conduit suitable for use where exposed to physical damage and for installation on poles in accordance with the NEC.

While marked for higher temperatures, rigid nonmetallic cellular core PVC conduit is intended for use with conductors and cable rated 75°C or less, including where it is encased in concrete within buildings and where ambient temperature is 90°C or less. Certified rigid nonmetallic cellular core PVC conduit is inherently resistant to atmosphere containing common industrial corrosive agents and will also withstand vapors or mist of caustic, pickling acids, plating bath and hydrofluoric and chromic acids.

Rigid nonmetallic cellular core PVC conduit (including couplings) that has been investigated for direct exposure to other reagents may be identified by the designation “Reagent Resistant” printed on the conduit itself. Such special uses are described as follows: Where exposed to the following reagents at 60°C or less: Acetic, Nitric (25°C only) acids in concentrations not exceeding 1/2 normal; hydrochloric acid in concentrations not exceeding 30%; sulfuric acid in concentrations not exceeding 10 normal; sulfuric acid in concentrations not exceeding 80% (25°C only); concentrated or dilute ammonium hydroxide; sodium hydroxide solutions in concentrations not exceeding 50%; saturated or dilute sodium chloride solution; cottonseed oil, or ASTM 5 petroleum oil.

Rigid nonmetallic cellular core PVC conduit is designed for connection to couplings, fittings and boxes by the use of a suitable solvent-type cement. Instructions supplied by the solvent-type cement manufacturer describe the method of assembly and precautions to be followed.

One of the following product identities appears on the product:

Rigid Nonmetallic Cellular Core Conduit Aboveground and Underground

The basic standard used to investigate products in this category is ANSI/UL 651, “Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Rigid Nonmetallic Cellular Core Conduit Aboveground and Underground” (Schedule 40) or “Rigid Nonmetallic Cellular Core Conduit Aboveground and Underground” (Schedule 80).

Rigid Nonmetallic PVC Conduit (DZYR)

USE AND INSTALLATION

This category covers rigid nonmetallic PVC conduit including straight conduit and elbows in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, intended for installation and use as rigid nonmetallic raceway for wire and cable in accordance with Article 352 of ANSI/NFPA 70, “National Electrical Code” (NEC). This conduit may be Schedule 40, Schedule 80, Type A or Type EB. This conduit is intended for installation and use in accordance with the following information.

Schedule 40 conduit is suitable for underground use by direct burial or encasement in concrete. Schedule 40 conduit marked “Directional Boring” (or “Dir. Boring”) is suitable for underground directional boring applications. Schedule 40 conduit is also suitable for aboveground use indoors or outdoors exposed to sunlight and weather where not subject to physical damage. Schedule 40 conduit marked “Underground Use Only” is only suitable for underground applications.

Schedule 80 conduit has a reduced cross-sectional area available for wiring space and is suitable for use wherever Schedule 40 conduit may be used. The marking “Schedule 80 PVC” identifies conduit suitable for use where exposed to physical damage and for installation on poles in accordance with the NEC.

Type A, Type EB and Schedule 40 conduit is intended for underground use under the following conditions, as indicated in the Certification Mark:

Type A – Installed with its entire length in concrete in any underground location.

Type B – Installed with its entire length in concrete in trenches outside of buildings.

Schedule 40 – Direct burial with or without being encased in concrete.

Where conduit emerges from underground installation, the wiring method is intended to be of a type recognized by the NEC for the purpose.

Unless marked for higher temperature, rigid nonmetallic PVC conduit is intended for use with wire rated 75°C or less, including where it is encased in concrete within buildings and where ambient temperature is 50°C or less. Where encased in concrete in trenches outside of buildings it is suitable for use with wires rated 90°C or less.
Rigid Nonmetallic PVC Conduit (DZYR)—Continued

Certified PVC conduit is inherently resistant to atmosphere containing common industrial corrosive agents and will also withstand vapors or mist of caustic, pickling acids, plating bath and hydrofluoric and chromic acids. PVC conduit and elbows (including couplings) that have been investigated for direct exposure to other reagents may be identified by the designation “Reagent Resistant” printed on the surface of the product. Such special uses are described as follows: Where exposed to the following reagents at 60°C or less: Acetic, Nitric (25°C only) acids in concentrations not exceeding 1/2 normal; hydrochloric acid in concentrations not exceeding 30%; sulfuric acid in concentrations not exceeding 80% (25°C only); or concentrated or dilute ammonium hydroxide; sodium hydroxide solutions in concentrations not exceeding 50%; saturated or dilute sodium chloride solution; cottonseed oil, or ASTM 3 petroleum oil.

Schedule 40, 80 Type EB and Type A PVC conduit is designed for connection to all PVC couplings, fittings and boxes by the use of a suitable solvent-type cement. Instructions supplied by the solvent-type-cement manufacturer describe the method of assembly and precautions to be followed. Elbows of material other than PVC are provided with PVC couplings to be solvent-cemented to PVC conduit.

PRODUCT IDENTITY
One of the following product identities appears on the product:

Rigid Nonmetallic Conduit Aboveground and Underground (Schedule 40)
Rigid Nonmetallic Conduit Aboveground and Undergound Extra Heavy Wall (Schedule 80)
Rigid Nonmetallic Conduit (Polyvinyl Chloride, Schedule 40)
Rigid Nonmetallic Conduit for Concrete Encasement Only (Type A)
Rigid Nonmetallic Conduit for Concrete Encasement in Outdoor Trenches Only (Type EB)

RELATED PRODUCTS
Additional certifications of rigid nonmetallic conduit suitable for use are covered under Reinforced Thermosetting Resin Conduit (DZKT) and Rigid Nonmetallic High-density-polyethylene Underground Conduit (EAZX).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 651, “Schedule 40 and 80 High Density Polyethylene (HDPE) Conduit.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol as illustrated in the Introduction of this Directory together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Rigid Nonmetallic Conduit Aboveground and Underground (Schedule 40),” “Rigid Nonmetallic Conduit Aboveground and Underground Extra Heavy Wall (Schedule 80),” “Rigid Nonmetallic Conduit Underground (Polyvinyl Chloride, Schedule 40),” “Rigid Nonmetallic Conduit Underground for Concrete Encasement Only (Type A)” or “Rigid Nonmetallic Conduit Underground for Concrete Encasement in Outdoor Trenches Only (Type EB).”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Conduit fittings for use in hazardous locations (EBNV)

GENERAL

This category covers the following types of fittings:

Conduit fittings for draining or venting are intended for mounting in existing conduit openings of conduit boxes and electrical devices. Fittings for draining or venting that do not mount in existing conduit openings, such as those with threads smaller than 1/2-in. trade size, are covered under UL’s Component Recognition Program. Only drain fittings with shutoff valves should be installed in oil-immersed devices and only where there is close supervision so that the fittings will not be left open to permit loss of oil.

Conduit fittings for sealing are intended for use only with sealing compounds specified by the manufacturer in instructions furnished with the fitting. where devices are intended for sealing conductors in conduit lines. No splices of conductors should be made in the fittings. Instructions with the fitting indicate any restriction on position or location of the sealing fittings. The maximum number and size of conductors that may be installed within the sealing fitting are stated in the manufacturer’s installation instructions provided with each fitting.

Conduit unions are intended for use in threaded rigid conduit wire raceways.

90-degree box connector-type conduit unions are intended for use at threaded openings of devices in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC).

Conduit unions, universal-type box connector are intended for use at threaded openings of devices in accordance with requirements of the NEC and may be assembled at an angle greater than 90 degrees.

Flexible connection fittings are substantial fittings having an insulated inner wall and flexible-metal outer wall encased in metal braid. They are intended for use where it is necessary to employ flexible connections in threaded rigid conduit systems. Information on the minimum inside radius of bend for which these fittings have been investigated is provided with the fitting. Authorities Having Jurisdiction should be consulted as to what conditions these flexible connection fittings will be accepted. The use of flexible fittings should be avoided whenever possible. They should be used only when conditions are such that threaded rigid conduit cannot be used.

Conduit elbows and short-radius capped elbows are intended for use where it is desirable to have a 90-degree bend and where wires may be guided when being pulled through the conduit line.

Cord connectors are intended for use in making connections between threaded rigid metal conduit systems or hazardous (classified) location devices and extra-hard-service-type flexible cord, having a grounding conductor, for portable equipment.

Fittings that are rain-tight or concrete-tight are so marked, or this information is provided with the fitting.

Cast-aluminum-alloy conduit fittings covered under this category are not considered acceptable for installation in concrete or cinder fill, unless protected with asphalt-base paint or the equivalent.

PRODUCT IDENTITY

The following product identity appears on the product:

- Conduit Fitting for Use in Hazardous Locations
- Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 514B, “Conduit, Tubing, and Cable Fittings.” Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certification.

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and the product name “Conduit Fitting for Hazardous Locations,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOOK FOR THE UL MARK ON PRODUCT

Conduit fittings for use in hazardous locations (EBNV)
This category covers connector systems employing nonstandard blade, slot and/or pin configurations that are intended for use in special-purpose applications in wiring systems recognized by ANSI/NFPA 70, “National Electrical Code” (NEC), or in highway lighting, utility company installations, and similar uses not within the scope of the NEC. These devices may incorporate switches or overcurrent protection. The connector systems may include the following types of products:

**Equipment, Power or Female Outlet** — A female contact device for mounting in or on utilization equipment.

**Receptacle** — A female contact device intended to be installed in or on a wiring system to supply current to utilization equipment.

**Plug** — A male contact device for connection and disconnection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

**Cord Connector** — A female contact device to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection for an attachment plug or, as an appliance coupler to a male inlet.

**Equipment, Power or Male Inlet** — A male contact device to be mounted in or on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

**Breakaway Connector** — A connector that is not intended for routine disconnection under load, but which is intended to separate from its mating half when subjected to an impact force in an emergency situation.

**Hybrid Connector** — A connector employing two or more dedicated constructions of blades, pins or contacts that are intended to perform different functions, such as handling power, signal currents, or fiber optic transmissions.

**TERMINAL**

The termination of devices intended to be wired to flexible cord is based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of the NEC. The ampacity of the flexible cord and cable is based on Section 408.5, Tables 400.5(A) and 400.5(B). Product markings or the manufacturer’s instructions provide with the device indicate the conductor sizes to be used. Unless stated otherwise in the individual certifications, the terminations are based on the use of 60°C flexible cord or cable. Unless stated otherwise in the individual certifications, the termination provisions of all devices for fixed wiring installations are based on use of conductors having temperature ratings marked on the product at their ampacities specified in Table 310.15(B)(16) of the NEC. These temperature ratings may be represented by a 7 or 9 associated with the marking “CU,” “AL” or “AL-CU,” e.g., “AL9,” “AL9CU,” “AL7CU,” “Cu7,” “Cu9.” Terminals not marked “AL-CU” are intended for use with copper conductors only. Terminals marked “AL-CU” are intended for use with aluminum, copper and copper-clad aluminum conductors.

**RATING**

These devices are rated 600 V or less, ac or dc, and 200 A or less. They may also be rated in wattage or in horsepower as noted in the individual certifications.

The devices are tested on circuits involving full rated potential to ground, except for multi-phase rated devices which are tested on circuits consistent with their voltage ratings, for example, a 120/208 V, 3-phase, device is tested on a circuit involving 120 V to ground.

**GROUNDING**

Devices having a terminal identified by a green colored finish, the words “green” or “ground,” the letters “G” or “GR,” or the “inverted-Christmas-tree” grounding symbol are grounding types. The blade, pin or contact member connected to this terminal is for equipment grounding only.

**APPLICATION**

Each individual connector certification may contain features that are unique to a system or application. Information concerning special installation procedures, compatibility and other important design features are provided in the individual certifications, on product markings, on product data sheets and/or in installation instructions. The individual certifications contain the following information:

- **Maximum Use Temperature** — Assigned to the connector systems based upon the temperature rating of the insulation of the intended conductors or the insulating materials used in the connectors, whichever is less.

- **Installation** — Indicates whether the connectors are intended for use on flexible cord or as a part of a fixed wiring system. Specifies whether the connectors are intended for use within an overall enclosure, within locations where they will be concealed (not readily accessible) after on-site interconnection of modules or building components, or where they will be exposed. Connectors intended for exposed or concealed installation are investigated for electrical insulation, mechanical strength, temperature rise, fault-current withstand, and effectiveness of grounding path to demonstrate equivalence to the wiring system on which they are intended to be installed.
CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS (ECPR)

Fixed and Stationary Storage Tanks (EDQX) — Covers metallic, nonmetallic and composite, fixed and stationary storage tanks, typically of larger size and intended for the long-term storage of fuels or similar flammable and/or combustible liquids at atmospheric pressure. These tanks are not intended to be moved with regular frequency (stationary), or are buried, or connected to structures or piping (fixed).

Underground tanks are fixed-type vessels constructed from metallic, nonmetallic or composites and are intended for direct burial applications. Underground tanks may also include integral upgrade systems or lining/coating systems for specific fuels. Aboveground tanks are stationary or fixed-type vessels constructed from metallics and are intended for above-grade applications. Aboveground tanks may also include limited mechanical accessories or special use applications.

Below-grade vaults are fixed-type compartments constructed from nonmetallics and intended for the watertight, below-grade storage of aboveground tanks with provisions for access, venting monitoring and optional secondary containment. Fire-rated tanks are stationary or fixed-type underground or underground tanks provided with structural support and thermal insulation intended for the physical and fire protection of the core tank, supports and stored liquid.

This category does not cover portable tanks intended for the commercial transport of liquid commodities by truck, rail or ship (as defined by Chapter 6.2 of ANSI/NFPA 30, “Flammable and Combustible Liquids Code,” in accordance with 49CFR, Subchapter C DOT Hazardous Materials Regulations,” or the ”UN Recommendations on the Transport of Dangerous Goods,” Part 6, “Requirements for the Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings and Portable Tank”).

This category does not cover aboveground flammable liquid tank systems (tanks) that include a base tank with integral pressure or vacuum pump, liquid-level device, leak-monitoring device, hose, nozzle or other dispensing equipment. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Aboveground Flammable-liquid Tanks (EEPV) — Covers metallic, nonmetallic and composite, fixed and stationary storage tanks, typically of larger size and intended for the long-term storage of fuels or similar flammable and/or combustible liquids at atmospheric pressure. These tanks are not intended to be moved for fuel-dispensing systems, and various pipe/sump accessories and components intended for use in the assembly of these systems.

Miscellaneous Tanks, Storage Products and Tank Accessories (WWXR) — Covers miscellaneous tanks and storage products intended for specific-use applications, and various tank accessories and components intended for use in or on completed containment products.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIXED AND STATIONARY STORAGE TANKS (EDQX)

This category covers metallic, nonmetallic and composite, fixed and stationary storage tanks, typically of larger size and intended for the long-term storage of fuels or similar flammable and/or combustible liquids at atmospheric pressure. These tanks are not intended to be moved with regular frequency (stationary), or are buried, or connected to structures or piping (fixed).

Underground tanks are fixed-type vessels constructed from metallics, nonmetallics or composites and are intended for direct burial applications. Underground tanks may also include integral upgrade systems or lining/coating systems for specific fuels.

Aboveground tanks are stationary or fixed-type vessels constructed from metallics and are intended for above-grade applications. Aboveground tanks may also include limited mechanical accessories or special use applications.

Below-grade vaults are fixed-type compartments constructed from nonmetallics and intended for the watertight, below-grade storage of aboveground tanks with provisions for access, venting monitoring and optional secondary containment.

Fire-rated tanks are stationary or fixed-type underground or underground tanks provided with structural support and thermal insulation intended for the physical and fire protection of the core tank, supports and stored liquid.

This category does not cover portable tanks intended for the commercial transport of liquid commodities by truck, rail or ship (as defined by Chapter 6.2 of ANSI/NFPA 30, “Flammable and Combustible Liquids Code,” in accordance with 49CFR, Subchapter C DOT Hazardous Materials Regulations,” or the ”UN Recommendations on the Transport of Dangerous Goods,” Part 6, “Requirements for the Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings and Portable Tank”).

This category does not cover aboveground flammable liquid tank systems (tanks) that include a base tank with integral pressure or vacuum pump, liquid-level device, leak-monitoring device, hose, nozzle or other dispensing equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Aboveground Flammable-liquid Tanks (EEPV) — Continued

This category does not cover field-erected tanks or portable/mobile tanks intended for shipping and transport, which are covered under separate requirements or regulations from the American Petroleum Institute, U.S. Department of Transportation, etc., or United Nations publications; or special-purpose tanks, such as utility or used oil...

These products have not been investigated for resistance to or use after hurricanes, tornadoes, earthquakes, floods or other natural disasters; or vehicle and similar impacts; and fire.

TANK TYPES

The following types of steel tank basic-containment constructions, designs and optional supports are indicated in the individual certifications:

Aboveground tank for flammable liquids (#) — Single-wall steel primary-containment tank.

Secondary-containment aboveground tank for flammable liquids (#) — Steel primary-containment tank within a steel secondary-containment shell forming an interstitial space capable of being pressurized and monitored for leakage.

(*) Diked aboveground tank for flammable liquids (#) — Steel primary-containment tank within a steel containment dike vessel capable of being monitored for leakage, but not capable of being pressurized.

(#) “on supports” — Optionally provided with supports to elevate and stabilize the tank above grade that are investigated for structural integrity.

(*) Diked tank designs are either:

“Open-top” — Dikes provided without covers that resist rain or debris entering the dike.

“Closed-top” — Dikes provided with covers that resist rain or debris entering the dike.

TANK ACCESSORIES

The following optional accessories noted in the individual certifications and investigated to additional requirements in ANSI/UL 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids," may also be attached to the base tank:

Access devices — Ladders, stairs or runways provided for access, working or walking surfaces on the tank.

Lifting devices — Structural lugs, hooks or others means to facilitate lifting of the tank during fabrication, transport or installation.

Heating devices — Heating coils or hot wells provided within the tank for heating liquids in the tank.

FEATURES COVERED

The basic features of tanks covered under this category include all containment spaces and their respective openings (manways, emergency vents, normal vents, fill/withdraw, gauging, monitoring and other functional openings) with connections (threaded- or flanged-type fittings), and the tank accessories identified above.

All primary-tank compartment(s) are provided with normal and emergency vent openings. All secondary-tank interstitial space(s) are provided with emergency vent openings. It is anticipated the continued venting will be provided when installed in accordance with the applicable code.

In addition to primary vent openings, all primary-tank compartment(s) are provided with openings to accommodate filling, withdrawing, and inventory control; and all secondary-tank interstitial spaces are provided with openings for leak-detection monitoring.

Accessories (when provided) are attached to the tank or, where attachment at the factory is not possible (due to size/weight limits and/or potential damage), may be shipped with assembly instructions separately from or with the base tank.

All tank-containment compartments have been factory leak-tested by the manufacturer before shipping.

ACCESSORIES/FEATURES NOT INVESTIGATED

This category covers only the accessories and features specifically identified in the individual certifications. Any other accessories or components that are shipped with the tanks, attached to the tanks, or added to the tanks are not included in the scope of the tank certification. It is intended that the AHJ approve the use and/or installation of any such accessories independent of the tank certification.

PRODUCT IDENTIFIER

One of the following product identities appears on the product:

Aboveground Tank for Flammable Liquids

Aboveground Tank for Flammable Liquids on Supports

Closed-top Diked Aboveground Tank for Flammable Liquids

Open-top Diked Aboveground Tank for Flammable Liquids

Secondary-containment Aboveground Tank for Flammable Liquids

Secondary-containment Aboveground Tank for Flammable Liquids on Supports

Other product identities may be used as shown in the individual certifications.

UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED” a control number, and the product name “Protected Secondary Containment Aboveground Tanks for Flammable Liquids.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Protected Aboveground Tanks for Flammable and Combustible Liquids (EELU)

USE AND INSTALLATION
This category covers protected aboveground tanks for flammable and combustible liquids intended for the aboveground storage of flammable and combustible liquids at atmospheric pressure. The tank constructions are provided with integral secondary containment and are designed to reduce the heat transferred to the primary tank should the construction be exposed to a hydrocarbon pool fire. Protected aboveground tanks for flammable and combustible liquids are intended for stationary installation and use in accordance with the “Uniform Fire Code” (published by the International Fire Code Institute), and the following installation codes: ANSI/NFPA 30, “Flammable and Combustible Liquids Code,” ANSI/NFPA 30A, “Code for Motor Fuel Dispensing Facilities and Repair Garages.”

PRODUCT MARKINGS
Tanks marked “Vehicle-Impact Resistant” or an equivalent statement have been investigated in accordance with the Vehicle Impact-Leakage test sequence. Tanks marked “Projectile Resistant” have been investigated in accordance with the Projectile Impact-Leakage test sequence. The “Vehicle-Impact Resistant” and “Projectile Resistant” markings are authorized for specific tank constructions and, therefore, are not indicated in the individual certifications.

FACTORS NOT INVESTIGATED
These tanks have not been investigated to determine acceptability for use after fire exposure.

PRODUCT IDENTITY
The following product identity appears on the product:
Protected Secondary-containment Aboveground Tank for Flammable Liquids

RELATED PRODUCTS
For fire-resistant tanks, see Fire-resistant Tank for Flammable and Combustible Liquids (EEZI).

ADDITIONAL INFORMATION
For additional information, see Fixed and Stationary Storage Tanks (EDQ), Containment Products for Flammable and Combustible Liquids (ECPF) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

Fire-resistant Tanks for Flammable and Combustible Liquids (EEZI)

USE AND INSTALLATION
This category covers fire-resistant tanks for flammable and combustible liquids intended for the aboveground storage of flammable and combustible liquids at atmospheric pressure. These tank constructions are designed to reduce the heat transferred to the primary tank should the construction be exposed to a hydrocarbon pool fire. These tanks are provided with integral secondary containment when markings include references to annular or interstitial spaces, and are provided with integral supports unless marked “Integral Supports Not Provided.”

PRODUCT MARKINGS
Tanks marked “Vehicle Impact Resistant” or an equivalent statement have been investigated in accordance with the Vehicle Impact-Leakage test sequence. Tanks marked “Projectile Resistant” have been investigated in accordance with the Projectile Impact-Leakage test sequence. The “Vehicle Impact Resistant” and “Projectile Resistant” markings are authorized for specific tank constructions and, therefore, are not indicated in the individual certifications.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Fire-resistant Secondary-containment Tank for Flammable Liquids
Fire-resistant Tank for Flammable Liquids

RELATED PRODUCTS
Protected tanks intended for installation in accordance with the “Uniform Fire Code” (published by the International Code Council) are covered under Protected Aboveground Tanks for Flammable and Combustible Liquids (EELU).

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under the Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire-Resistant Tank for Flammable Liquids" or "Fire Resistant Secondary Containment Tank for Flammable Liquids."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Special-purpose Tanks (EFVT)**

**USE AND INSTALLATION**

This category covers special-purpose, shop-fabricated, steel primary, secondary and diked containment-type tank constructions intended for aboveground storage of noncorrosive, stable, flammable and/or combustible liquids of maximum 1.0 spg at atmospheric pressure as indicated in the individual certifications.

These tanks are intended for fixed or stationary installation and use in accordance with ANSI/NFPA 30, "Flammable and Combustible Liquids Code," ANSI/NFPA 31, "Fire Code," (published by the International Code Council), other codes/standards as noted under **TANK TYPES** below, and/or other requirements of the Authority Having Jurisdiction (AHJ).

This category covers only the basic tank constructions and optional tank accessories specifically identified in the individual certifications that are investigated to additional requirements under the base tank standards.

This category does not cover field-erected tanks or portable/mobile tanks intended for shipping and transport, which are covered under separate requirements or regulations of the American Petroleum Institute, U.S. Department of Transportation, etc., or United Nations publications; or general-purpose tanks.

These products have not been investigated for resistance to or use after hurricanes, tornadoes, earthquakes, floods or other natural disasters; or vehicle and similar impacts; and fire.

**TANK TYPES**

The following types of steel tank basic-containment constructions and special-purpose designs are indicated in the individual certifications:

- **Generator base tank (#)** — Tank used for combined combustible fuel storage and structural support for diesel- or turbine engine power generators and intended to be installed in accordance with ANSI/NFPA 37, "Installation and Use of Stationary Combustion Engines and Gas Turbines," and ANSI/NFPA 110, "Emergency and Standby Power Systems." Combustible fuels are typically Class II Types, such as diesel, kerosene, or turbine oils.

- **Secondary-containment generator base tank (#)** — Generator base tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

- **Fire-resistant generator base tank (#)** — Generator base tank provided with thermal insulation and other features to keep the primary tank shell temperature at no more than 800°F (max avg rise) and 1000°F (max point) during a two-hour 2000°F fire exposure. These tanks may optionally meet vehicle-impact- and/or projectile-impact-resistance requirements (+).

- **Fire-resistant secondary-containment generator base tank (#)** — Fire-resistant generator base tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage) provided with thermal insulation and other features to keep the primary tank shell temperature at no more than 260°F (max avg rise) and 400°F (max point) during a two-hour 2000°F fire exposure. These tanks may optionally meet vehicle-impact- and/or projectile-impact-resistance requirements (+).

- **Work-top (or Workbench) tank (#)** — Tank used for combined combustible-liquid storage and work-top (or workbench) surface intended to be installed in accordance with ANSI/NFPA 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages," or ANSI/NFPA 31, "Installations for Flammable and Combustible Liquids (ECPR)"—Tank used for storage of unused lubricating oils and intended to be installed in accordance with ANSI/NFPA 30A or ANSI/NFPA 31. Lube oils are limited to Class IIIA or IIIB types, such as motor crankcase oils, hydraulic/transmission oils, machine/cutting oils, or similar fluids.

- **Secondary-containment used-oil tank (#)** — Lube-oil tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

- **Day tank (#)** — Tank used for storage of unused lubricating oils and intended to be installed in accordance with ANSI/NFPA 30A or ANSI/NFPA 31. Lube oils are limited to Class IIIA or IIIB types, such as motor crankcase oils, hydraulic/transmission oils, machine/cutting oils, or similar fluids.

- **Diked day tank (#)** — Day tank of a diked containment type (aboveground storage tank within a steel containment dike vessel that is capable of being monitored for leakage, but not capable of being pressurized).

- **Open-top** — Dikes provided without covers that resist rain or debris entering the dike.

- **Closed-top** — Dikes provided with covers that resist rain or debris entering the dike.

- **Fire-resistant or protected tank impact-resistance investigation options are either:**

- **Vehicle-impact-resistant** — Designs compliant with the Vehicle Impact Test in UL 2080, "Fire Resistant Tanks for Flammable and Combustible Liquids," or ANSI/UL 2085, "Protected Aboveground Tanks for Combustible Liquids."

- **Projectile-resistant** — Designs compliant with the Projectile Test in UL 2080 or ANSI/UL 2085.

**TANK ACCESSORIES**

The following optional accessories noted in the individual certifications and investigated to additional requirements in ANSI/UL 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids," may also be attached to the base tank.

- **Access devices** — Ladders, stairs or runways provided for access, working or walking surfaces on the tank.

- **Lifting devices** — Structural lugs, hooks or others means to facilitate lifting of the tank during fabrication, transport or installation.

- **Heating devices** — Heating coils or hot wells provided within the tank for heating liquids in the tank.

**FEATURES COVERED**

The basic features of tanks covered under this category include all containment spaces and their respective openings (manways, emergency vents, normal vents, fill/withdraw, gauging monitoring and other functional openings) with connections (threaded- or flanged-type fittings), and the tank accessories identified above. All primary-tank compartment(s) are provided with normal and emergency ventilation, and all secondary-tank interstitial spaces are provided with openings for leak-detection monitoring.

**ACCESSORIES/FEATURES NOT INVESTIGATED**

This category covers only the accessories and features specifically identified in the individual certifications. Any other accessories or components...
that are shipped with the tanks, attached to the tanks, or added to the tanks are not included in the scope of the tank certification. It is intended that the AHJ approve the use and/or installation of any such accessories independent of the tank certification.

PRODUCT IDENTITIES

One of the following product identities appears on the product:

- Generator Base Tank
- Protected Secondary-containment Generator Base Tank

Other product identities may be shown in the individual certifications.

UL MARK

This Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate tank construction as indicated in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underground Tank Lining Systems (EGAY) — GENERAL

This category covers nonmetallic pre-engineered primary containment lining systems intended to be field installed inside of existing atmospheric-type steel or fiberglass underground horizontal cylindrical fuel-storage tanks. These lining systems form an integral nonstructural containment barrier that is bonded to the existing tank, and may provide additional features, such as minor repairs of the core tank. The combinations of system types, materials, features and liquid ratings are described under TYPES AND RATINGS below.

Underground Tank Lining Systems (EGAY) — CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS (ECPR)

Since lining systems are intended for field installations that require special equipment, training and procedures not covered by UL’s normal Follow-Up Service inspections at a factory, these products are Listed by Report. The factory Follow-Up Service only includes inspection of the component liner material(s), and markings and instructions packaged with each field lining kit.

Under this form of certification, a UL Report is prepared which describes the complete lining system process and detailed instructions for proper installation including but not limited to the minimum core tank design and condition criteria, cleaning and internal surface preparation, liner application and curing, and liner property and leak testing. Copies of the Report are available from the Listee.

TYPES AND RATINGS

The tank lining system types, materials, features and liquid ratings, as indicated in the individual certifications, are defined as follows:

- **Underground Tank Lining System for Type A** — Nonmetallic lining systems consist of thin coatings directly applied (bonded) to the internal wall of an underground tank that provides primary containment. Lining systems additionally provide internal corrosion protection for steel tanks.

- **Underground Storage Tank Type** — Investigated for use in steel, fiberglass, or steel and fiberglass underground tanks.

- **General Fuel Rating** — One of the following ratings for commercially available fuels covered by 40CFR80, "Regulation of Fuels and Fuel Additives," and compliant with ASTM fuel specifications for commercial engines (SI or CI) and heating/burning appliances:
  - **Petroleum Products Only** Includes petroleum hydrocarbon fuels with-out bio-blends ASTM D4814 gasoline (E0), ASTM D975 diesel (B0), ASTM D396 fuel oil and biodiesel blends (max B5).
  - **Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures** Includes all “Petroleum Products Only” liquids; plus petroleum hydrocarbon fuels with bio-blends, such as ASTM D4814 gasoline and ethanol blends (max E10), ASTM D975 diesel and biodiesel blends (max B5), ASTM D396 fuel oil and biofuel blends (max B5).
  - **Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures** Includes all “Petroleum Products and Gasohol” liquids; plus petroleum hydrocarbon fuels with fuel oil blends of mid-high biofuel blends, such as ASTM D4814 gaso-line and ASTM D5798 ethanol blends (E11 – E83), ASTM D7467 mid-range biodiesel blends (B6 – B20), common-fuel-blast stocks and components, such as methanol, ethanol, ASTM D4806 denatured fuel ethanol (nom E97), ASTM D5797 fuel methanol (nom M85), and other fuel blends thereof.

FACTORS NOT INVESTIGATED

This category is not intended to evaluate or cover the manufacturer’s installation instructions pertaining to the safety of the applicator (the person who applies the tank upgrade materials) for compliance with worker safety regulations, such as by the Occupational Safety and Health Administration, or any environmental emissions or disposal regulations, such as by the Environmental Protection Agency.

These tank upgrade materials have not been investigated for their physiological effects, if any, nor the manufacturer’s specifications for the safety of the applicator during the upgrade process and the potential risks associated with the opening, entering, purging, cleaning, inspecting, sandblasting, upgradin, closing and testing of a tank that has been used to store flammable liquids. Questions concerning these and other safety, environmental or other regulatory issues should be referred to the manufacturer.

PRODUCT IDENTITIES

One of the following product identities appears on the product:

- Fiberglass Underground Tank Lining System for Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures
- Fiberglass Underground Tank Lining System for Petroleum Products and Gasohol (Unleaded Gasoline and 10% Maximum Ethyl Alcohol)
- Fiberglass Underground Tank Lining System for Petroleum Products Only
- Steel and Fiberglass Underground Tank Lining System for Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures
- Steel and Fiberglass Underground Tank Lining System for Petroleum Products and Gasohol (Unleaded Gasoline and 10% Maximum Ethyl Alcohol)
- Steel and Fiberglass Underground Tank Lining System for Petroleum Products Only
- Steel Undergound Tank Lining System for Petroleum Products, Alco-hols and Alcohol-Gasoline Mixtures
- Steel Undergound Tank Lining System for Petroleum Products and Gasohol (Unleaded Gasoline and 10% Maximum Ethyl Alcohol)
- Steel Underground Tank Lining System for Petroleum Products Only

Nonmetallic internal upgrade systems for underground tanks are covered under Underground Tank Upgrade Systems (EGSJ).
CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS (ECPR)

Underground Tank Lining Systems (EGAY)—Continued

Steel, fiberglass, and external corrosion-resistant underground tanks are covered under Underground Flammable-liquid Tanks (EGHX). ADDITIONAL INFORMATION

For additional information, see Fixed and Stationary Storage Tanks (EDQX), Containment Products for Flammable and Combustible Liquids (ECPR) and Flammable and Combustible Liquids and Gas Equipment (AAPQ).

REQUIREMENTS

The requirements used to investigate products in this category are based on:

Steel underground tank lining systems — UL 1746, “External Corrosion Protection Systems for Steel Underground Storage Tanks”

Fiberglass underground tank lining systems — UL 1516, “Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is affixed to the exterior surface of the tank lining system (typically around the tank-entry manway or collar).

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR INSTALLATION AND USE IN ACCORDANCE WITH UL REPORT, REFERENCE NO. __, DATED ___

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate liner system type and liquid rating for the individual Listings as indicated under TYPES AND RATINGS above, followed by the statement “When Installed and Used in Accordance with UL Report, Reference No. __, DATED ___.”

The Listing Mark is affixed to the exterior surface of the tank lining system (typically around the tank-entry manway or collar).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underground Tanks (EGHX)

GENERAL

This category covers shop-fabricated horizontal cylindrical tanks intended for the fixed underground storage of noncorrosive, stable, flammable and combustible liquids at atmospheric pressure in capacities of up to 50,000 gal (189,301 L) and diameters up to 12 ft (3.65 m). The combinations of construction materials, containment types, designs, options and liquid ratings are described under TYPES AND RATINGS below.

TYPES AND RATINGS

The tank materials, containment types, designs options and liquid ratings, as indicated in the individual certifications, are defined as follows:

($) Type I or Type II secondary-containment construction, where: Type I is an external shell with direct contact to the primary shell for at least 300° of containment, and Type II is an external shell with indirect contact (separated by standard) to the primary shell for a full 360° of containment.

Steel Tanks

These are all-steel tanks constructed and investigated to UL 58, “Steel Underground Tanks for Flammable and Combustible Liquids,” and are not provided with an external corrosion-protection system investigated by UL. These tank constructions may be primary (single wall) or secondary (double wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the (*) liquid ratings:

Underground tank for (*) — A steel primary containment tank with one or more compartments.

($) secondary-containment underground tank for (*) — A steel primary containment tank wrapped within an external steel shell that provides both secondary containment and interstitial monitoring.

Fiberglass Tanks

These are all-fiberglass tanks constructed and investigated to ANSI/UL 1516, “Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures.” These tank constructions may be primary (single wall), secondary (double wall) or tertiary (triple wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the (#) liquid ratings:

Nonmetallic underground tank for (#) — A primary fiberglass tank with one or more compartments.

($) secondary-containment nonmetallic underground tank for (#) — A primary fiberglass containment tank wrapped within an external fiberglass shell that provides both secondary containment and interstitial monitoring.

Tertiary-containment nonmetallic underground tank for (#) — A Type I or Type II secondary-containment fiberglass tank completely contained within an external fiberglass shell that provides both tertiary containment and interstitial monitoring.

Corrosion-Resistant Tanks

These are base steel tanks (UL 58 primary or secondary types) provided with an external corrosion-protection system constructed and investigated to ANSI/UL 1746, “External Corrosion Protection Systems for Steel Underground Storage Tanks.” These tank constructions may be Cathodic (Part I, Coated Part II) or Cathodically Protected (Part IV) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the (*) liquid ratings:

Cathodically protected underground tank for (*) — A steel primary tank with a pre-engineered, galvanic-type cathodic-protection system (anode pack with connecting wires and dielectric coating and bushings) that provides external corrosion protection.

Cathodically protected type ($) secondary-containment underground tank for (*) — A steel Type I or Type II secondary-containment tank covered directly (bonded) with a thin nonmetallic cladding (min 70 mil PUR) which provides external corrosion protection.

($) secondary-containment coated underground tank for (*) — A steel Type I or Type II secondary-containment tank covered directly (bonded) with a thick nonmetallic cladding (min 100 mil FRP) which provides external corrosion protection.

($) secondary-containment composite underground tank for (*) — A steel Type I or Type II secondary-containment tank covered directly (bonded) with a thick nonmetallic cladding (min 100 mil FRP) which provides external corrosion protection.

Composite underground tank for (*) — A steel primary tank covered directly (bonded) with a thick nonmetallic cladding (min 100 mil FRP) which provides external corrosion protection.

Jacketed underground tank for (*) — A steel primary tank completely contained within a nonmetallic external tank jacket (min 100 mil FRP, PUR, PE or Polyurea) which provides secondary containment, interstitial leak monitoring, and external corrosion protection.

Jacketed tertiary-containment underground tank for (*) — A steel Type I or Type II secondary-containment tank completely contained within a nonmetallic external tank jacket (min 100 mil FRP, PUR, PE or Polyurea) which provides tertiary containment, interstitial leak monitoring, and external corrosion protection.

Liquid Ratings

The above tank types are additionally rated in the individual certifications for either one or more general fuel blend ranges, or flammable liquids as follows:

($) General Fuels — One of the following ratings for commercially available fuels covered by 40CFR80, “Regulation of Fuels and Fuel Additives,” and compliant with ASTM Fuel specifications for general-purpose commercial engines (S or CI) and heating/burning appliances:

Petroleum Products Only — Includes petroleum hydrocarbon fuels without bio-blends ASTM D4814 gasoline (E0), ASTM D975 diesel (B0), ASTM D396 fuel oil (B0), ASTM D3699 kerosene (K1 and K2); and similar
flammable or combustible liquid petroleum derivatives, such as fuel components (cetane, hexane, heptane, iso-octane, etc.), and oils (lube, hydraulic, machine, etc.).

**Petroleum Products and Gasohol (Unleaded Gasoline with Max 10% Ethanol)** — Includes all “Petroleum Products Only” liquids; plus petroleum hydrocarbon fuels with low biofuels blends, such as ASTM D4814 gasoline and ethanol blends (max E10), ASTM D975 diesel and biodiesel blends (max B5), ASTM D396 fuel oil and bio heat blends (max B5).

**Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures** — Includes all “Petroleum Products and Gasohol” liquids; plus petroleum hydrocarbon fuels with mid-high biofuels blends, such as ASTM D4814 gasoline and ASTM D5798 ethanol blends (E11 – E83), ASTM D7467 mid-range biodiesel blends (B6-B20); and similar flammable or combustible liquid petroleum derivatives, such as ethanol, methanol, ASTM D4806 denatured fuel ethanol (nom E97), ASTM D5797 fuel methanol (nom M85), and other fuel-blend combinations thereof.

### Flammable Liquids
Includes all liquids in the three “General Fuels” ratings above; plus other stable flammable or combustible liquids with chemical properties similar to the general fuels and liquids described above having generally accepted chemical compatibility with the materials used in the product, such as other alcohols and solvents (pentane, hexanol, acetone, ketone, etc.), or other petroleum derivatives (xylene, toluene, naphtha, turpentine, etc.).

### RELATED PRODUCTS
See Underground Tank Lining Systems (EGAY) for nonmetallic internal tank lining and coating systems.

See Underground Tank Upgrade Systems (EGSJ) for nonmetallic internal tank containment and rating upgrade systems.

### ADDITIONAL INFORMATION
For additional information see Fixed and Stationary Storage Tanks (EDQX), Containment Products for Flammable and Combustible Liquids (ECPR) and Flammable and Combustible Liquids and Gas Equipment (AAPQ).

### REQUIREMENTS
The basic standard used to investigate products in this category is one or more of the following:

**Steel tanks:** UL 58, “Steel Underground Tanks for Flammable and Combustible Liquids”

**Fiberglass tanks:** ANSI/UL 1316, “Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures”

**Corrosion-resistant tanks:** ANSI/UL 1746, “External Corrosion Protection Systems for Steel Underground Storage Tanks,” with specific requirements for:

- **Cathodic systems per Part I, “Pre-Engineered Cathodic Protection Systems”**
- **Coated tanks per Part IV, “Coated Tanks”**
- **Composite tanks per Part II, “Composite Tanks”**
- **Jacketed tanks per Part III, “Jacketed Tanks”**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**Consult Local Authorities Before Covering This Tank**

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, the appropriate tank construction for the individual Listings as indicated in TYPES AND RATINGS above, and the statement “Consult Local Authorities Before Covering This Tank.”

**FACTORS NOT INVESTIGATED**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Below-grade Vaults for Flammable-liquid Storage Tanks (EOHJ) – Continued

**Structural Considerations**

Vaults are constructed of reinforced concrete, minimum six inches thick, or other structurally-equivalent noncombustible material. The structural integrity of the vaults has been investigated in accordance with the specifications contained in the installation instructions and owner’s manual provided with the vault.

**Water-intrusion Resistance**

The basic vault, when assembled with required gaskets or seals, has been investigated to verify that it forms a liquid-tight enclosure that will not permit external ground water to enter the vault. Access-way construction and other openings have been investigated to verify that they will not allow water intrusion into the vault when the covers and seals are in place.

**Secondary Containment**

Below-grade vaults marked “Secondary Containment” have also been investigated and found to provide secondary containment from a primary-tank leak.

**Access Ways**

A minimum of one access way is provided for entering the vault. The Authority Having Jurisdiction should be consulted to determine the acceptability of the location and number of access openings, location of the tank and components inside the vault, and other features required to provide adequate access to various areas inside the vault.

**Confined-space Entry**

Care should be taken during installation, maintenance, inspection and operation to verify that entry into the vault is performed in accordance with the appropriate OSHA requirements for confined-space access.

**Electrical Installation**

The Authority Having Jurisdiction should determine the acceptability of any electrical components installed in or around the vault, and the extent of any classified electrical installations.

**Installation Instructions**

Installation instructions are provided with each vault. These instructions cover:

- Site preparation, including excavation, soil preparation and backfilling.
- Installation and placement of the vault in the ground and the tank in the vault, including assembly of the vault sections and installation of gasketing and seals.
- Anchoring the vault in the ground, and the tank in the vault.

**PRODUCT IDENTITY**

The following product identity appears on the product:

**Below-grade Vault for Flammable-liquid Storage Tanks**

**ADDITIONAL INFORMATION**

For additional information, see Fixed and Stationary Storage Tanks (EDQX), Containment Products for Flammable and Combustible Liquids (ECPIR) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

**REQUIREMENTS**

Care should be taken during installation, maintenance, inspection and operation to verify that entry into the vault is performed in accordance with the appropriate OSHA requirements for confined-space access.

**Electrical Installation**

The Authority Having Jurisdiction should determine the acceptability of any electrical components installed in or around the vault, and the extent of any classified electrical installations.

**Installation Instructions**

Installation instructions are provided with each vault. These instructions cover:

- Site preparation, including excavation, soil preparation and backfilling.
- Installation and placement of the vault in the ground and the tank in the vault, including assembly of the vault sections and installation of gasketing and seals.
- Anchoring the vault in the ground, and the tank in the vault.

**PRODUCT IDENTITY**

The following product identity appears on the product:

**Below-grade Vault for Flammable-liquid Storage Tanks**

**ADDITIONAL INFORMATION**

For additional information, see Fixed and Stationary Storage Tanks (EDQX), Containment Products for Flammable and Combustible Liquids (ECPIR) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 2245, “Below-Grade Vaults for Flammable Liquid Storage Tanks.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Below-grade Vault for Flammable-liquid Storage Tanks.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
CONTROL DAMPERs (EIMZ)

GENERAL
This category covers control dampers intended for installation in air-handling spaces (plenums). Plenums are defined in ANSI/NFPA 90A, “Installation of Air Conditioning and Ventilating Systems.”

These dampers have been subjected to tests to determine the peak rate of heat release, and the maximum peak and average normalized optical smoke density. The performance of the dampers with regard to operability has not been investigated.

Sizes — The maximum sizes expressed in inches representing the maximum width and maximum height, or maximum diameter, are shown in the individual certifications for each damper model.

Abbreviations — The following abbreviations are used in the individual certifications:

- H — Horizontal
- V — Vertical

 Authorities Having Jurisdiction should be consulted before installation.

PRODUCT IDENTITY
The following product identity appears on the product:

Control Damper

RELATED PRODUCTS

Fire dampers, smoke dampers, combination fire and smoke dampers, and corridor dampers are covered under Dampers for Fire Barrier and Smoke Applications (EMME).

Dampers intended for installation in air-handling openings penetrating fire-resistive-membrane ceilings are covered under Ceiling Dampers (CAB)

ADDITIONAL INFORMATION
For additional information, see Building Materials (AABM) and Heating, Cooling, Ventilating and Cooking Equipment (AHAC).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 2043, “Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.”

Products covered under this category have demonstrated the following rate of heat release and smoke optical density values, through tests conducted in accordance with UL 2043:

1. A peak rate of heat release of 100 kW or less,
2. A peak normalized optical density of 0.50 or less, and
3. An average normalized optical density of 0.15 or less.

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under the Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:

AS TO HEAT-RELEASE RATE AND SMOKE OPTICAL DENSITY
Alternate UL Mark

UL MARK
The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CONTROL DAMPER
AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CORD SETS AND POWER-SUPPLY CORDS (ELBZ)

GENERAL
This category covers (1) cord sets, (2) power-supply cords for use as supply connections for portable appliances, and (3) shore power cable sets for use as supply connections to boats that are moored to a dock.

This category also covers bulk certified power-supply cords that are repackaged from their original packaging.

Cord sets and power-supply cords are not intended to be used as a substitute for the fixed wiring of a structure and, hence, are not intended to be fastened in place. Cord sets and shore power cable sets are rated in volts, amps and watts.

Cord sets, shore power cable sets, and power-supply cords are commonly furnished in hanked or coiled form. If used in this condition, excessive heating may occur. Therefore, when placed into service, all wrappings should be removed, and the flexible cord should be extended for its entire length.

Cord sets and power-supply cords that employ ground-fault circuit interrupter protection are investigated to ANSI/UL 943, “Ground-Fault Circuit-Interrupters,” and covered under Ground-fault Circuit Interrupters (KCCS).

For information regarding the flexible cord types and their ratings, see Flexible Cord (ZICZ).

CORD SETS
A cord set consists of a length of flexible cord assembled (1) to an attachment plug or current tap as a line fitting and a cord connector as a load fitting, and with or without a through-cord switch, or (2) with a series-connected current tap and a pendant switch.

Cord sets are designated as one of the following types and are so identified by the Certification Mark.
Cord Set — This is a cord set intended for general use indoors and assembled with general-use flexible cord and general purpose fittings. These cord sets may be less than six feet long. Cord sets shorter than six feet long are marked to indicate their length. Cord sets may also have integral restraint devices to prevent unintentional disconnection of the cord connector from a mating attachment plug of an appliance. Restraint devices that are separate from cord sets are covered under Cord Restraint Devices (ELDWD).

Outdoor-use Cord Set — This is a cord set assembled with outdoor type flexible cord without a switch, and which is intended for use outdoor to supply portable electric equipment. It is (1) marked “Suitable For Use With Outdoor Appliances — Store Indoors While Not In Use,” (2) suitable for supplying portable outdoor appliances within their marked voltage, amp and wattage rating, (3) intended for use outdoors only while the equipment supplied is in use, and (4) intended to be stored indoors (i.e., where not exposed to sunlight and/or weather) while not in use. Such a cord set has been investigated to determine (1) that the materials in the flexible cord and in the line and load fittings are suitable for periodic use outdoors.

The connection between the attachment plug cap and the load device supplying the cord set, and between the supply cord of any connected appliance and the load end of the cord set should not be subject to moisture or dampness. Outdoor-use cord sets may also have integral restraint devices to prevent unintentional disconnection of the cord connector from a mating attachment plug of an appliance. Restraint devices that are separate from cord sets are covered under Cord Restraint Devices (ELDWD).

Adapter Cord Set — This is an outdoor-use cord set, without a switch, consisting of an attachment plug, a length of extra-hard usage outdoor-type flexible cord, and one or more load fittings providing:

1. a total of not more than three outlets configured together, or configured with one or more flexible cords, or
2. up to six single-outlet load fittings, provided that each load fitting is in line and spaced apart form the others.

Adapter cord sets are intended for use in areas such as construction sites to provide power to two or three outlets from a single outlet, or to convert from one outlet configuration to another. An adapter cord set with more than one single-outlet load fitting may have a joint in the flexible cord with the cord branching to two or three cords, each terminating in a single-outlet load fitting.

Cord Set for Recreational Vehicles — This is an outdoor-use cord set intended for use in supplying power to recreational vehicles.

Shore Power Cable Set — A shore power cable set is an outdoor-use cord set that is used in supplying power to boats moored to a dock. They are intended to be stored aboard the boat where not exposed to sunlight and/or weather while not in use. The line and load fittings are of the locking type, rated not less than 20 A and are to be connected to suitable shore power outlet and hull power inlet devices, respectively. The connection of the attachment plug to a shore-based power outlet and the connection of the cord connector to a shore power inlet, aboard a boat, provides a seal against water. Shore power cable sets are also covered under Shore Power Cable Sets, Marine (UBWWM).

POWER-SUPPLY CORDS

Power-supply cords may be either the nondetachable type or detachable type. Any item attached to the load end of a nondetachable power-supply cord is not covered under this category.

Power-supply cords are designated as one of the following types and are so identified by the Certification Mark:

Nondetachable Types

Power-supply Cord — This is a power-supply cord consisting of a length of flexible cord assembled with an attachment plug or current tap as a line fitting but without a cord connector (appliance coupler) at the opposite end. It is intended for direct wiring connection to an appliance and may include a through-cord switch. Nondetachable power-supply cords may be one of the following:

- **Power-supply Cord for General Use** — This is a power-supply cord consisting of a suitable fitting for line connection assembled to a length of general-purpose flexible cord, and may include a through-cord switch.

- **Power-supply Cord for Ranges and Dryers** — This is a power-supply cord consisting of a general-use nondetachable power-supply cord constructed using Type SRD or SRDT flexible cable. The flexible cable may employ a neutral conductor which is two AWG sizes smaller than the other circuit conductors, but not smaller than 10 AWG.

Outdoor-use Power-supply Cord — This is a power-supply cord assembled with outdoor-type flexible cord. It is for use with portable outdoor appliances.

Power-supply Cord for Recreational Vehicles — This is an outdoor-use power-supply cord with the outer surface of the flexible cord marked “For Recreational Vehicle Use: ___ Amps.”

Detachable Types

Detachable Power-supply Cord — A detachable power-supply cord consists of a length of flexible cord assembled with (1) an attachment plug or current tap as a line fitting at one end and (2) a single outlet load fitting (appliance coupler) at the opposite end. It is intended for use and packaging with appliances. It may be one of the following types:

- **Detachable Power-supply Cord Having an Appliance Plug** — This is a power-supply cord, not less than 2 feet long, with an appliance plug as a load fitting.

- **Detachable Power-supply Cord Having a Flatiron Plug** — This is a power-supply cord, not less than 6 feet long, having a heater cord and a flatiron plug as a load fitting.

- **Detachable Power-supply Cord for Appliances Rated Not Greater Than 50 W** — This is a power-supply cord for use with hand-held appliances rated 50 W or less and having a load fitting (appliance coupler) for use with electric shavers, electric scissors, electric combs, and the like.

Detachable Power-supply Cord — Special Use — A special-use detachable power-supply cord is intended for restricted use and incorporates special design features (such as special cords and fittings) for a specific application. Each is provided with marking pertinent to its proper use, and/or limitations and electrical rating.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Adapter Cord Set
- Cord Set
- Cord Set for Recreational Vehicles
- Detachable Power-supply Cord
- Detachable Power-supply Cord – Special Use
- Outdoor-use Cord Set
- Outdoor-use Power-supply Cord
- Power-supply Cord
- Power-supply Cord – Special Use
- Power-supply Cord for Mobile Home
- Power-supply Cord for Recreational Vehicles
- Replacement Detachable Power-supply Cord
- Replacement Outdoor-use Power-supply Cord
- Replacement Power-supply Cord
- Shore-power Cable Set

RELATED PRODUCTS

Power-supply cords intended for use with waste disposers are investigated to ANSI/UL 430. “Waste Disposers,” and covered under Waste Disposers, Sink Mounted (ZDB). Only those power-supply cords that have been investigated to ANSI/UL 430 are permitted to be marked “Garbage Disposal Cord,” or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 817, “Cord Sets and Power-Supply Cords.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

All Certification Marks are applied to each individual piece except for “Power-supply Cord.” “Outdoor-use-power-supply Cord” and “Detachable-power-supply Cord.” These products are bulk labeled (label applied to smallest container indicating number of pieces) and are not intended for field application.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate:

- “Cord Set”
- “Outdoor Use Cord Set”
CORD-RESTRAINT DEVICES (ELDW)

GENERAL
This category covers devices provided with retention means intended to reduce the likelihood of an attachment plug of an appliance becoming unintentionally detached from a mating cord connector of a cord set or a fixed receptacle. These devices are constructed such that (1) the plug and mating connector or receptacle are not enclosed so as to permit dissipation of any heat generated at the connection, and (2) the plug can be separated from the mating cord connector or receptacle without the use of a tool.

These devices are not an integral or permanently attached component of a cord set or receptacle, but rather are separate add-on devices. Cord-restraint mating cord connectors or receptacles without the use of a tool.

All Listing Marks are applied to each individual piece except for “Power Supply Cord,” “Outdoor Use Power Supply Cord,” and “Detachable Power Supply Cord.” These products are bulk labeled (label applied to smallest container indicating number of pieces) and are not intended for field application.

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT IDENTITY
The following product identity appears on the product:
Cord-restraint Device

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used as a guide to investigate products in this category is ANSI/UL 817, “Cord Sets and Power Supply Cords.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cord-restraint Device,” or other appropriate product name.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

OUTDOOR SEASONAL-USE CORD-CONNECTED WIRING DEVICES (ELEI)

USE AND INSTALLATION
This category covers cord-connected wiring devices intended for temporary outdoor use only, for a period not to exceed 90 days. These devices are intended for use with outdoor equipment, Christmas tree and other seasonal decorative-lighting outfits. They may be provided with integral overcurrent protection, clock operated and/or photoelectric switches.

These devices are not intended for permanent installation. Devices equipped with a grounding pin to provide protection against electric shock are intended to be plugged into a ground-fault circuit-interrupting (GFCI) receptacle.

UTILITY-SERVICE CORD SETS (ELFT)

GENERAL
This category covers utility-service cord sets having an attachment plug of a unique, nonstandard configuration intended for mating with a utility-
CORD SETS WITH LEAKAGE-CURRENT DETECTION AND INTERRUPTION (ELGN)

The basic standard used to investigate products in this category is ANSI/UL 1699, “Arc-Fault Circuit Interrupters.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cord Set with Leakage Current Detection and Interruption.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CORD SETS WITH LEAKAGE-CURRENT DETECTION AND INTERRUPTION (ELGN)

GENERAL

This category covers cord sets provided with leakage-current detection and interruption. These products are intended to sense leakage currents flowing between or from the conductors of the cord set and interrupt the circuit. Under certain conditions, if this leakage current is allowed to continue flowing from the conductors, risk of ignition of combustible materials may result.

When leakage current above a predefined limit is detected, the device removes the supply source from the cord either electronically or via “air break” contacts. The cord remains de-energized until the condition causing the excessive leakage current has cleared or the device has been manually reset.

The “Test” and “Reset” buttons are not intended for on/off control of the connected load unless specifically marked “ON/OFF.”

These devices do not provide ground-fault protection of equipment as required by Article 426 of ANSI/NFPA 70, “National Electrical Code” (NEC), nor are these devices ground-fault circuit interrupters for personnel protection as defined by the NEC.

The ability of the devices to sense and interrupt leakage currents in locations other than the integral cord set has not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:

Cord Set with Leakage-current Detection and Interruption

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

CORD SETS AND POWER-SUPPLY CORDS (ELBZ)

Utility-service Cord Sets (ELFT) – Continued

service receptacle (see Utility-service Receptacles [RNW]), which utilizes the grounded neutral conductor of the supply as the equipment grounding conductor. These cord sets have been investigated with regard to protection from the risk of electrical shock and their ability to function without overheating.

These cord sets are intended for use only by authorized utility company personnel in obtaining power from utility poles and as marked (e.g., 125 V, 15 A).

PRODUCT IDENTITY

The following product identity appears on the product:

Utility-service Cord Set

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 817, “Cord Sets and Power-Supply Cords.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO PROTECTION FROM ELECTRIC SHOCK AND ABILITY TO FUNCTION WITHOUT OVERHEATING

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UTILITY SERVICE CORD SET

AS TO PROTECTION FROM ELECTRIC SHOCK AND ABILITY TO FUNCTION WITHOUT OVERHEATING

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CORD SETS WITH LEAKAGE-CURRENT DETECTION AND INTERRUPTION (ELGN)

GENERAL

This category covers cord sets provided with leakage-current detection and interruption. These products are intended to sense leakage currents flowing between or from the conductors of the cord set and interrupt the circuit. Under certain conditions, if this leakage current is allowed to continue flowing from the conductors, risk of ignition of combustible materials may result.

When leakage current above a predefined limit is detected, the device removes the supply source from the cord either electronically or via “air break” contacts. The cord remains de-energized until the condition causing the excessive leakage current has cleared or the device has been manually reset.

The “Test” and “Reset” buttons are not intended for on/off control of the connected load unless specifically marked “ON/OFF.”

These devices do not provide ground-fault protection of equipment as required by Article 426 of ANSI/NFPA 70, “National Electrical Code” (NEC), nor are these devices ground-fault circuit interrupters for personnel protection as defined by the NEC.

The ability of the devices to sense and interrupt leakage currents in locations other than the integral cord set has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, “Arc-Fault Circuit Interrupters.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cord Set with Leakage Current Detection and Interruption.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
This category covers crane and hoist electrification systems designed to provide electrical power from a fixed source to moving equipment. Rigid electrification systems consist of insulated contact conductors, collectors, and feed-in devices, together with supports by which the system may be mounted on tram rails, crane bridges, or hoist runways. Festoon electrification systems consist of moving carriers and feed-in devices that support separately supplied flexible cable and which may be mounted on tram rails, crane bridges, or hoist runways with sufficient cable slack to allow moving equipment to travel a limited distance.

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AAIZ). The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Corrosion Measuring Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GENERAL

This category covers corrosion-measuring equipment, including control units, indicators, sensors, probes and auxiliary devices, used as part of corrosion-measuring systems. Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Collector
- Conductor
- Crane and Hoist Electrification System
- Insulator

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, “Industrial Control Equipment,” and ANSI/UL 857, “Busways.”

UL MARK

The Certification Mark of UL on each part (for collectors, conductors, insulators, etc.) or on the smallest unit container in which the complete crane and hoist electrification system is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on each part or on the smallest unit container in which the complete system is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name on each part (e.g., “Conductor,” “Collector,” “Insulator”) or the name “Crane and Hoist Electrification System” on the smallest complete system container.

Current Tap

— A device that adapts one blade or slot configuration to another (including a grounded configuration for a non-grounding receptacle). (See Attachment Plugs, Fuselless (AXUT) for certifications of similar products.)

Current Tap — A male and female contact device that, when connected to an outlet receptacle or cord set, provides multiple outlets or outlet configurations. An outlet configuration may consist of a slot configuration, or provisions for the connection of flexible cord.

Current Tap Providing Power to Class 2 Equipment — A current tap with an integral power supply with one or more Class 2 output low-voltage connectors when connected to an outlet receptacle.

PRODUCT IDENTIFY

One of the following product identities appears on the product:

- Adapter
- Cube Tap
- Current Tap
- Tap

ADDITIONAL INFORMATION
CUSTOM-BUILT KIOSKS (EMHH)

GENERAL

This category covers kiosks, rated 240 V or less, normally found in malls, retail stores, offices and business establishments, educational facilities and other similar environments.

These kiosks are intended but not limited for business applications, electronic point-of-sale, information and product exchange, Internet access or ticket dispensing.

Kiosks may also be provided with electronic access control of storage lockers for the exchange of mail, parcels and packages and the like.

Kiosks consist of a cabinet that typically contains a power-supply adapter(s), monitor(s), computer(s), currency-processing equipment, printer(s), fan(s) and speaker(s).

Kiosks are provided with assemblies or subassemblies, consisting of components such as amplifiers, casting, CD-ROM drive, floppy drive, clock, keyboard, CPU, monitor, DVD player or from a database on network-server computer, ethernet card (dial-up connection or network link), input devices (trackball, mouse, light-pen/stylus, point/magnetic strip) card reader, bar code reader, character keyboard (physical or virtual), Internet connectivity, a light sensor that enables automatic adjustment of the monitor intensity, modems, monitor (touch-screen capacity), movement detectors used to call attention of passersby, multimedia machine with ample RAM and fast hard-drive access, power supply; printers: laser, dot matrix, thermal; serial ports (touch-screen), serial and printer ports for any peripheral devices, such as modems or ISDN boards for communications and digital or analog I/O board used to control different types of processes, stereo speakers, telecommunication, telephone accessories, “Watched” timer that can ensure the system resets in unlikely case of hang-ups, UPS or video graphics card.

Assemblies and subassemblies may include but are not limited to central processing units (CPUs), disk drives, fiber optic transceivers, monitors, personal computers, plotters, printers, point-of-sale kiosks, scanners (including portable bar code scanners), tape drives, workstations; multimedia equipment and accessories: digital cameras; teleconferencing systems, network connection equipment; telecommunication equipment: telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems; reproduction equipment: copiers, duplicating machines; interconnecting cable assemblies: cable assemblies intended for use within the kiosk.

INSTALLATION

Kiosks are intended to be installed in an indoor environment unless identified otherwise in the individual certifications. Kiosks have been determined to be suitable for use in an ambient temperature not exceeding the manufacturer’s recommended ambient temperature as specified in the equipment’s installation instructions. Kiosks may be cord-and-plug connected or configured for permanent wiring systems. Some kiosks may not be provided with a complete enclosure and are intended for building into a structure as specified in the equipment’s installation instructions.

FACTORS NOT INVESTIGATED

Kiosks have not been investigated for security (card readers, badge readers, currency-processing equipment, storage of mail, parcels or packages, and similar equipment) unless specifically identified in the individual certifications. Kiosks are not intended to dispense merchandise.

The physiological effects of chemical substances used in or with this equipment have not been investigated. The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Custom-built Kiosk

Other product identities may be used as shown in the individual certifications.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU).

ATMs that have not been investigated for security and burglary protection are covered under Bank Equipment (BALT).

Machines for vending nonrefrigerated food and beverages, general merchandise, etc., are covered under Vending Machines (YWXV).

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated (SQMX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the individual assembly and sub-assembly components in this category is ANSI/UL 60950-1, “Information Technology Equipment Safety – Part 1: General Requirements.” Products intended for outdoor use only are additionally investigated to ANSI/UL 60950-2-22, “Information Technology Equipment Safety – Part 22: Equipment to be Installed Outdoors.”

The basic requirements used to investigate the overall product consisting of various assemblies and subassemblies enclosed in a cabinet in this category are contained in UL Subject 2361, “Outline of Investigation for Custom-Built Kiosks.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and the product name “Current Tap,” “Tap,” “Cube Tap” or “Adapter.”

The Listing Mark for this category requires the use of a holographic label.

DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONS (EMME)

GENERAL

This category covers fire dampers, smoke dampers (leakage-rated dampers), combination fire and smoke dampers (fire and leakage-rated dampers), and corridor dampers.

Installation — All dampers covered under this category are intended to be installed in accordance with the installation instructions provided with the equipment. Authorities Having Jurisdiction should be consulted before installation. Unless otherwise indicated in the installation instructions, the annular space between the sleeves of fire dampers, combination fire and smoke dampers, or corridor dampers and the wall opening should not be filled with firestop materials, such as step-in. Materials for filling, firestop materials, such as step-in.

Air-flow and Pressure Ratings — Fire dampers for use in dynamic systems, smoke dampers, combination fire and smoke dampers, and corridor dampers are marked with the maximum air flow and static pressure HVAC system conditions for which the damper has been investigated. The air-flow (velocity) ratings are established in increments of 100 CFM/ft² of damper area (FPM), with the minimum being 2000 CFM/ft². The air-flow ratings are established based on test conditions with the damper in the full open position. The static pressure ratings are established in increments of 2 in.WG, with the minimum being 4 in.WG. The static pressure ratings are established based on test conditions with the damper in the full closed position.
**DAMPERs FOR FIRE BARRIER AND SMOKE APPLICATIONs (EMME)**

**Sizes** — The maximum sizes expressed in inches representing the maximum width and maximum height are shown in the individual certifications for each fire damper model, for both single sections and multiple section assemblies.

**Abbreviations** — The following abbreviations are used in the individual certifications:

- **Fire-Protection Rating**
  - ○ HR Class — Hourly Classification
  - ○ V — Vertical
  - ○ H — Horizontal
  - ○ V, H — Vertical & Horizontal

**Maximum Damper Size**

- ○ W — Width
- ○ H — Height

**FIRE DAMPERS**

Fire dampers are intended for installation where air ducts penetrate or terminate at openings in walls or partitions, in air transfer openings in partitions, and where air ducts extend through floors as specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems." Fire dampers are prescribed for use by codes such as the ‘International Building Code’ (IBC), ‘International Mechanical Code’ (IMC) and ‘Uniform Mechanical Code’ (UMC).

Fire dampers have been investigated for fire-protection ratings of 1-1/2 or 3 h as indicated in the individual certifications.

**Fire Dampers for Use in Dynamic Systems** — Fire dampers for use in dynamic systems are prescribed for use in dynamic HVAC systems that remain operational during a fire, and may also be employed in static systems.

**Fire Dampers for Use in Static Systems** — Fire dampers for use in static systems are intended for use only in static HVAC systems that are automatically shut down in the event of a fire.

**SMOKE DAMPERS**

Smoke dampers (leakage-rated dampers) are intended for the protection of openings in smoke barriers, or in engineered smoke-control systems as specified in ANSI/NFPA 90A. Smoke dampers are prescribed for use by codes such as the IBC, IMC and UMC.

Leakage ratings for smoke dampers are classified as Class I, II or III as shown in the following table. Leakage ratings of the damper are established at a minimum differential pressure of 4 in. water gauge (WG), across the closed damper. Leakage rates may also be established at higher differential pressures, in increments of 2 in. water gauge.

**Maximum Leakage (CFM/ft²)**

Leakage ratings for smoke dampers are determined at elevated temperatures. The elevated temperatures are in increments of 100°F with the minimum temperature being 250°F. Leakage ratings of smoke dampers are established based on test conditions using heated air.

Certified dampers are marked with respect to the Leakage Class at elevated test temperature.

**Combination Fire and Smoke Dampers**

Combination fire and smoke dampers (fire and leakage-rated dampers) are intended for use in locations that are designated as both fire barriers and smoke barriers. These products can also be described as combination fire/smoke dampers as defined by the IBC. Combination fire and smoke dampers have been investigated for both a fire-protection rating of 1-1/2 or 3 h and a leakage rating as defined under SMOKE DAMPERS. Leakage ratings of combination fire and smoke dampers are determined at an elevated temperature 250°F or 350°F. Leakage ratings of combination fire and smoke dampers are established based on test conditions using heated air.

**Corridor Dampers**

Corridor dampers are intended for use where air ducts penetrate or terminate at horizontal openings in the ceilings of interior corridors, as defined in the City of Los Angeles Building Code, IBC, or where permitted by the Authority Having Jurisdiction.

City corridor dampers have been investigated for, and are intended for, installation only in specific corridor ceiling constructions as defined in the installation instructions provided with each damper.

Corridor dampers have been investigated for both a fire-resistance rating of 1 h, and a Class I or II leakage rating as defined under SMOKE DAMPERS. Leakage ratings of corridor dampers are determined at an elevated temperature 250°F or 350°F. Leakage ratings of corridor dampers are established based on test conditions using air. Corridor dampers have also demonstrated acceptable closure performance when subjected to 150 fpm velocity across the face of the damper during fire exposure.

**MaintenancE**

**DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONs (EMME)**

Fire dampers, smoke dampers, combination fire and smoke dampers, and corridor dampers may require periodic maintenance to ensure continued proper operation. The level of maintenance required is dependent on several factors including the product manufacturer’s and system designer’s recommendations, code requirements, and the complexity of the system in which the damper is installed.

It is recommended that periodic maintenance of dampers include at least the following:

- Removal of debris buildup from the damper and surrounding area
- Manual cycling of dampers released by fusible links
- Cycling of damper and actuator assemblies

**Additional Information on Periodic Inspection, Testing, and Maintenance of Fire Dampers**

Fire dampers, combination fire and smoke dampers, and ceiling dampers can be found in ANSI/NFPA 80, ‘Fire Doors and Other Opening Protectives.’

Additional information on periodic inspection, testing, and maintenance of smoke dampers and combination fire and smoke dampers can be found in ANSI/NFPA 105, ‘Installation of Smoke Door Assemblies and Other Opening Protectives.’

Additional information on periodic testing of smoke-control systems can be found in ANSI/NFPA 92, ‘Smoke Control Systems.’

**Additional Information on Periodic Testing of Smoke-Control Systems**

For dampers intended for installation in air-handling openings penetrating fire-resistant membrane ceilings, see Ceiling Dampers CABS.

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AHAC) and Fire Resistance Ratings (BXRH).

**REQUIREMENTS**

The basic standard used to investigate fire dampers for use in dynamic systems and fire dampers for use in static systems in this category is ANSI/UL 555, ‘Fire Dampers.’

The basic standard used to investigate smoke dampers in this category is ANSI/UL 555S, ‘Smoke Dampers.’

Combination fire and smoke dampers, and corridor dampers are investigated to the applicable requirements of both ANSI/UL 555 and ANSI/UL 555S.

**UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words ‘CERTIFIED’ and ‘SAFETY,’ the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**Fire Damper for Use in Dynamic Systems**

- +HR

**Fire Damper for Use in Static Systems**

- +HR

**Smoke Damper**

**FOR LEAKAGE RESISTANCE CLASS ++++**

**Combination Fire and Smoke Damper**

**FOR LEAKAGE RESISTANCE CLASS ++++**

**Corridor Damper**

**FOR LEAKAGE RESISTANCE CLASS ++++**

**Alternate UL Mark**

**U L M A R K**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word ‘CLASSIFIED’ above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**Fire Damper for Use in Dynamic Systems**

- +HR

**Fire Damper for Use in Static Systems**

- +HR

**Looking for the UL Mark on Product**

---

Note: The table and text content are formatted to maintain readability and coherence. The content includes detailed specifications and recommendations for fire and smoke dampers, emphasizing the importance of periodic maintenance and the use of UL certification marks for product identification. The table provides leakage ratings for damper sizes, while the text elaborates on the categories and conditions for installation, maintenance, and testing of these critical components in building safety systems.
DATA PROCESSING CABLE (EMRB)

**PRODUCT IDENTITY**

The following product identity appears on the product:

Data Processing Cable, Type DP

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1685, “Data Processing Cable.”

**UL MARK**

- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

- The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Data Processing Cable, Type DP.”

- The Listing Mark for this category requires the use of a holographic label.

**DATA PROCESSING CABLE (EMRB)**

**GENERAL**

This category covers Type DP data processing cable for use in computer rooms and under the raised floors of computer rooms in accordance with Article 645 of ANSI/NFPA 70, “National Electrical Code.” The cable consists of one or more insulated conductors that are covered with a nonmetallic jacket. The cable may contain grounding conductors and/or optical fiber members.

**MARKET PRODUCING**

Data processing cable is identified by marking on the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

- **DP-1** — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 to 8 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, “Reference Standard for Electrical Wires, Cables, and Flexible Cords.”

- **DP-1P** — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 to 8 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable meets the requirements of ANSI/NFPA 262, “Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.”

- **DP-2** — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581.

- **DP-2P** — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable meets the requirements of ANSI/NFPA 262.

- **DP-3** — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coxial conductors. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581.

- **DP-3P** — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coaxial conductors. This cable meets the requirements of ANSI/NFPA 262.

- **DP-4** — Indicates cable rated 12 to 8 AWG aluminum or copper-clad aluminum. Type DP-3 and Type DP-3P cable is for use in circuits having maximum available ac voltage of 30 V, dc voltage of 60 V, peak voltage of 42.2 V, VA of 100 and current of 8 A or in circuits designated DP-1 in UL 60950, “Information Technology Equipment.”

- **DP-4P** — Indicates cable rated 12 to 8 AWG aluminum or copper-clad aluminum. Type DP-4 and Type DP-4P cable is for use in circuits having maximum available ac voltage of 30 V, dc voltage of 60 V, peak voltage of 42.2 V, VA of 100 and current of 8 A or in circuits designated DP-1 in UL 60950, “Information Technology Equipment.”

- **DP-5** — Indicates cable with copper-clad aluminum conductors that is surface printed “AL.”

- **DP-5P** — Indicates cable with copper-clad aluminum conductors that is surface printed “AL (CU-CLAD)” or “Cu-Clad.”

**USE AND INSTALLATION**

This category covers individual units and systems primarily electronic in function and design, which are intended to accumulate, process or store data, and are intended for use in computer rooms or other areas set aside for purpose. Various groupings of equipment are included in this category, such as:

- **Data processing equipment:** Computers, disk drives, memories, modems, tape drives, terminals.

- **Desk-top aides:** Typewriters, staplers, tape dispensers, pencil sharpeners, erasers, calculators, adding machines, dictation and transcribing machines, microfilm readers, display units.

- **Mailing, banking and currency-handling equipment:** Cash registers, coin counters, feeders and dispensers, accounting machines, check writers, signers and daters, mailing, inserting, numbering and stamping machines, writing machines.

- **Office aids:** File cabinets, sorters, shredders, deleavers, cutters, stackers, bursters, conveyors, folding, embossing and sealing machines.

- **Reproduction equipment:** Duplicating machines, copiers, reproduction printers, microfilm printers, exposure machines, processors, enlargers, transparency makers, facsimile machines.

- **PHYSIOLOGICAL EFFECTS**

Many of these units and systems require special installation such as separate transformer and branch-circuit power, power supplies, special grounding methods, high-frequency motor generator equipment, air conditioning, etc. Such features are covered in the manufacturer’s installation instructions.

The individual units comprising a system installation are designed to be interconnected by means of one or more of the wiring methods outlined in Article 645 of ANSI/NFPA 70, “National Electrical Code.”

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is separately provided.

**ACCESSORIES**

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic certified equipment specified in the markings or instructions.

**DATA PROCESSING EQUIPMENT, ELECTRONIC (EMRT)**

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Card Punch
- Card Reader
- Computer
- Data Processing Equipment
- Data Set
- E.D.P. Equipment
- Electronic Data Processing Equipment

**LOOK FOR THE UL MARK ON PRODUCT**
Other product identities may be used as shown in the individual certifications.

The product identity for field-installed accessories includes the word "Accessory.

RELATED PRODUCTS

Air conditioning equipment intended for use with computer rooms or other areas in which data processing equipment is installed is covered under Air Conditioners, Special Purpose (ACVS) and Heating and Cooling Equipment (LZEF).

Fire-resistant materials, sprinklers, extinguishers, and associated equipment recommended by ANSI/UL 70, "Fire Protection of Information Technology Equipment," for computer rooms is covered under Carbon Dioxide Extinguishers (FXHV) and Halogenated Agent Extinguishing System Units (GLER).

Smoke detectors are covered under Smoke-automatic Fire Detectors (UROX); alarm equipment is covered under Single- and Multiple-station Smoke Alarms (UTG7).

Equipment associated with data processing but not intended for use in computer rooms is covered under Graphic Arts Equipment (KCQT), Teaching and Instruction Equipment (WVF9), Office Appliances and Business Equipment (QAOT) and Medical Equipment (PIDS).

Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security. Equipment investigated with respect to security or burglary resistance is covered under Access Control System Units (ALVY), Anti-theft Alarms and Devices (ATTJ), and other associated categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AA2).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 478, "Electronic Data-Processing Units and Systems."

As of April 1, 2000, new product submittals for electronic data processing equipment are investigated to ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," and are covered under Information Technology Equipment Including Electrical Business Equipment (NWWQ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words "LISTED," a control number, and one of the following product names as appropriate: "Data Processing Equipment," "Electronic Data Processing Equipment" (or "EDP Equipment"), "Card Punch," "Card Reader," "Computer," "Data Set," or the name of the specific type of product as shown in the individual Listings.

The Listing Mark for field-installed accessories includes the word "Accessory.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC SIGNS CERTIFIED FOR ENERGY EFFICIENCY TO CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 6, SECTION 148 (ENVS)

GENERAL

This category covers new-construction indoor and outdoor electric signs and changing-message signs certified for energy efficiency.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Changing-message Sign
- Changing-message Sign Section
- Electric Sign

For rebuilt products, the word "Rebuilt" precedes the product identity.

RELATED PRODUCTS

See Signs (UXYT) and Signs, Changing Message (UYFS) for information relating to the safety certification of these products.

REQUIREMENTS

These products are certified for energy efficiency in accordance with the California Code of Regulations, Title 24, Part 6, Section 148 (2008), "California Building Standards Code; California Energy Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. These products bear the Certification Mark for Signs (UXYT) or Signs, Changing Message (UYFS), together with the "ENERGY" designation.

The Certification Mark for this category requires the use of a holographic label.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- California Code of Regulations, Title 24, Part 6, Section 148 [identification of the method of compliance with Section 148]
- Alternate UL Mark

Signs covered under UXYT and UYFS are eligible to bear the UL Energy Verification Mark when investigated for UL Listing and energy efficiency.

The UL Listing Mark and the UL Energy Verification Mark will always appear together on signs covered under this program.

The Energy Verification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Energy Verification Mark for these products includes the Listing Mark for Signs (UXYT) or Signs, Changing Message (UYFS) and the following additional information:

1. The UL Leaf symbol with the words "Energy Verified"
2. The text "California Code of Regulations, Title 24, Part 6, Section 148"
3. Identification of the method of compliance with Section 148

The Verification Mark for this category requires the use of a holographic label.

* * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN HAZARDOUS LOCATIONS (ENWS)

GENERAL

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in are classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch circuit power, power supplies, special grounding methods, high-frequency motor generator equipment, etc. Such features are covered in the manufacturer's installation instructions. Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

RECONDITIONED PRODUCTS

This category also covers data processing equipment that is reconditioned by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills (reconditioned data processing equipment may also be referred to as rebuilt). Reconditioned data processing equipment is reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned parts. Reconditioned data processing equipment is subject to the same requirements as new data processing equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Data Processing Equipment for Use in Hazardous Locations
- Data Processing Equipment with Circuits for Use in Hazardous Locations
- Electronic Data Processing Equipment for Use in Hazardous Locations
- Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations
- Electronic Data Processing Equipment (Associated Apparatus)
- Electronic Data Processing Equipment (Associated Apparatus)
The words “Electronic Data Processing” may be abbreviated “E.D.P.” Other product identities may be used as shown in the individual certifications.

For reconditioned products, the word “Reconditioned” or “Rebuilt” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Data Processing Equipment for Use in Hazardous Locations,” “Electronic Data Processing Equipment for Use in Hazardous Locations” (or “E.D.P. Equipment for Use in Hazardous Locations”), “Data Processing Equipment with Circuits for Use in Hazardous Locations,” “Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations” (or “E.D.P. Equipment with Circuits for Use in Hazardous Locations”), “Data Processing Equipment (Associated Apparatus)” (or “E.D.P. Equipment (Associated Apparatus)” or “E.D.P. Equipment (Associated Apparatus)”), or the name of the specific type of product as shown in the individual Listings.

For reconditioned products, the word “Reconditioned” or “Rebuilt” precedes the product name.

**UL**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**DIELECTRIC MEDIUMS (EOUV)**

**USE**

This category covers liquids intended for use as dielectric and cooling mediums. Gasoline is not intended to replace mineral oil unless equipment is also designed for the specific liquid.

These products have been certified as to their fire hazard only, using UL’s method for classification of the fire hazard of liquids. They have been rated on a numerical scale of hazard ranging from 0 to 100 as indicated in the table below:

<table>
<thead>
<tr>
<th>General Classification</th>
<th>Numerical Classification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diethyl ether</td>
<td>100</td>
</tr>
<tr>
<td>Gasoline</td>
<td>90 to 100</td>
</tr>
<tr>
<td>Ethyl alcohol</td>
<td>60 to 70</td>
</tr>
<tr>
<td>Kerosene</td>
<td>30 to 40</td>
</tr>
<tr>
<td>Paraffin oil</td>
<td>10 to 20</td>
</tr>
<tr>
<td>Water or nonflammable</td>
<td>0 or nonflammable</td>
</tr>
</tbody>
</table>

* A standard kerosene of 100°F (37.8°C) flash point (closed cup) is rated 30 to 40.
* A paraffin oil of 440°F (226.7°C) flash point (closed cup) is rated 10 to 20.

**PRODUCT CATEGORIES BY CATEGORY CODE**

**GENERAL**

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in areas classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch-circuit power, power supplies, special grounding methods, high-frequency motor-generator equipment, etc. Such features are covered in the manufacturer’s installation instructions.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Data Processing Equipment for Use in Hazardous Locations
- Data Processing Equipment with Circuits for Use in Hazardous Locations
- Electronic Data Processing Equipment for Use in Hazardous Locations
- Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations
- Electronic Data Processing Equipment (Associated Apparatus)
- E.D.P. Equipment (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.
DIELECTRIC MEDIUMS (EOUV)

Products covered under this category are additionally marked with the following information:

**AS TO FIRE HAZARD ONLY**

These products may also be marked with the following statement:

**MAY EVOLVE FLAMMABLE GASES WHEN DECOMPOSED BY AN ELECTRIC ARC**

Alternative UL Mark

**UL MARK**

The Classification Mark of UL on the product container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY]**

**CLASSED**

**AS TO FIRE HAZARD ONLY**

Control No.

The Classification Mark may also include the following statement as appropriate:

**MAY EVOLVE FLAMMABLE GASES WHEN DECOMPOSED BY AN ELECTRIC ARC**

**Classified**

**ALSO CERTIFIED AS A “LESS-FLAMMABLE LIQUID”**

**ALSO CERTIFIED AS A “NONFLAMMABLE FLUID”**

**CONTINUED**

DIMMERS (EOVZ)

**DIMMERS, COMMERCIAL (EOXT)**

**USE**

This category covers incandescent and fluorescent commercial dimmers intended for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual certifications. They are intended for control of single- or multi-output lighting circuits. They are intended only for the control of permanently installed luminaires.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Commercial Dimmer

**RELATED PRODUCTS**

Dimmers intended for use in residential applications are covered under Dimmers, General Use Switch (EOYX). Additional special-application dimmers are covered under Dimmers, Theater (EPAR) and Dimmers, Theater Controls (EPCF).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Commercial Dimmer.”

**Transformer Fluids (EOVK) – Continued**

**AS TO FIRE HAZARD ONLY**

These products may also be marked with one or more of the following statements:

**MAY EVOLVE FLAMMABLE GASES WHEN DECOMPOSED BY AN ELECTRIC ARC**

**ALSO CERTIFIED AS A “LESS-FLAMMABLE LIQUID”**

**ALSO CERTIFIED AS A “NONFLAMMABLE FLUID”**

**CONTINUED**

**USE**

This category covers liquids intended for use as dielectric and cooling mediums in electrical transformers.

These products have been certified as to their fire hazard using UL’s method for classification of the fire hazard of liquids. They have been rated on a numerical scale of hazard ranging from 0 to 100 as indicated in the table below:

**General Classification**

<table>
<thead>
<tr>
<th>Fluid</th>
<th>Numerical Classification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diethyl ether</td>
<td>100</td>
</tr>
<tr>
<td>Gasoline</td>
<td>90 to 100</td>
</tr>
<tr>

<tr>
<td>b A paraffin oil of 440°F (226.7°C) flash point (closed cup) is rated 10 to 20.</td>
<td></td>
</tr>
</tbody>
</table>

**USE RESTRICTIONS**

Products certified as “less-flammable liquid” may have use restrictions on the product container. Certain fluids have use restrictions which require that the fuse be either a type which does not vent under normal operation, or it must be installed external to the transformer tank.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Transformer Fluid, Classed 100
- Transformer Fluid, Classed 90 to 100
- Transformer Fluid, Classed 60 to 70
- Transformer Fluid, Classed 30 to 40
- Transformer Fluid, Classed 10 to 20
- Transformer Fluid, Classed 0 or Nonflammable

**RELATED PRODUCTS**

Liquids intended for use as dielectric and cooling mediums are covered under Dielectric Mediums (EOUV).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPC).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 340, “Tests for Comparative Flammability of Liquids.” These products are also certified as a “less-flammable liquid” or “nonflammable fluid” in accordance with Sections 450.23 or 450.24 of ANSI/NFPA 70, “National Electrical Code.”

**UL MARK**

The Certification Mark of UL on the product container is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Commercial Dimmer.”
DIMMERS, GENERAL-USE SWITCH (EOYX)

GENERAL

This category covers dimmers for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual certifications. They are intended only for the control of permanently installed luminaires.

RATINGS

Dimmers are rated maximum 600 V ac (120 V ac for touch dimmers) and are intended for installation on a 20 A or less branch circuit. Dimmers are rated for lamp or lamp control loads from 300 W or 300 VA to a maximum of 2000 W or 2000 VA. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual certifications.

PRODUCT MARKINGS

Dimmers may include one or more of the following installation-related markings:

On the dimmer:
- “For Dimmer Use Only” or “Control of Permanently Installed Fixtures Only,” or the equivalent. The blank identifies the type of lighting (luminaire) load, such as “Incandescent,” “Fluorescent” or “Low Voltage.”
- A class or grade mark, where the blank indicates “copper” or “Cu,” “aluminum” or “AL,” or both. If symbols are used, they shall be as follows:
  - For a terminal rated for copper wire only:
    - Cu
  - For a terminal rated for use with both copper and aluminum wire:
    - Cu Al

On the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer, the word “CAUTION” followed by one of the statements or equivalent as indicated below based upon the intended load:

For dimmers controlling a ballast — “To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, or a Transformer-supplied Appliance,”

For dimmers controlling a tungsten-filament load — “To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, a Fluorescent Lighting Fixture, or a Transformer-supplied Appliance,”

For dimmers controlling a low-voltage transformer — “To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, or a Motor-operated Appliance”

Additionally, one or more of the following markings may appear on the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer:
- “For multiple ganged installations apply derating factor”
- “For use with ___,” where the blank identifies specific manufacturers and models of electronic ballast, electronic power supply or low-voltage supply.
- “For use with magnetic ballast ___,” where the blank identifies specific manufacturers and models. If no specific manufacturer or model is specified, the dimmer is rated for control of any magnetic ballast.
- “For use with Class 2 supply only”

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Dimmer
- Outlet Box Lighting Control
- Wall Box Dimmer

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Dimmers used for special applications are covered under Dimmers for Commercial Use (EOXZ), Dimmers for Theater Use (EPAR) and Controls for Dimmering Equipment (EPCY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1472, “Solid-State Dimming Controls.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dimmer,” “Outlet Box Lighting Control” or “Wall Box Dimmer,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIMMERS, THEATER (EPAR)

USE

This category covers luminaire dimmers intended for use in motion picture and television studios, as well as theaters and similar locations. The dimmers may be intended for portable use, rack mounting, or be suitable for permanent installation. This category also covers theater dimming modules intended for mounting in theater switchboards.

PRODUCT IDENTITY

The following product identity appears on the product:

- Theater Dimmer

RELATED PRODUCTS

Dimmers not intended for motion picture and television studio or theater stage use are covered under Dimmers, Commercial (EOXZ).

Theater switchboards incorporating removable dimming modules are covered under Switchboards, Special Purpose (WFXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 334, “Outline of Investigation for Theater Lighting Distribution and Control Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Theater Dimmer.”
Dimmers, Theater (EPAR)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Dimmers, Theater, Controls (EPCT)

GENERAL

This category covers control units intended to interface with stage, studio, and theater lighting dimming equipment. These units may be provided with various user controls. The units are provided with a number of control outputs to operate different types of dimming equipment and associated equipment, such as moving luminaires and special effects equipment. They may be provided with integral computer systems.

OUTPUT CONNECTORS/CIRCUITS

Output circuits intended for local task lighting and the like are Class 2 circuits and are marked “Class 2.” All other output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus, PS/2 connectors, MIDI and DMX512 are limited power circuits supplied by ANSI/UL 60950-1 limited power sources, unless:

- the circuits are clearly telecommunication circuits (e.g., RJ series modular jack, 5-pin commercial connectors with insulation piercing terminals). These circuits are limited to telecommunication network voltages (TNV) and are suitable for connection to the telecommunication network and distribution wiring in accordance with Article 800 of ANSI/NFPA 70, “National Electrical Code.”
- the circuits are marked, or otherwise identified in the installation and user instructions with the type of circuit (e.g., Class 1), intended cable type (e.g., DP-2) or specific equipment intended to be interconnected (e.g., mg/ll model printer).

Limited power circuits of certified ITE supplied by limited power sources are recognized by Section 725.41A(4) of the NEC as being equivalent to Class 2 circuits for purposes of applying Article 725 Class 2 wiring requirements.

PRODUCT IDENTITY

The following product identity appears on the product:

Theater Lighting Control Console

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Dimmers, Theater (EPAR) and Electrical Equipment for Use in Ordinary Locations (AA2).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, “Information Technology Equipment – Safety – Part 1: General Requirements.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Theater Lighting Control Console,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIRECT-PLUG-IN AND CORD-CONNECTED CLASS 2 POWER UNITS (EPBU)

USE

This category covers indoor and outdoor use Class 2 power supplies and battery chargers intended for use on alternating-current branch circuits with a maximum potential of 150 V to ground. Products covered are (1) portable and semipermanent-mounted direct-plug-in units provided with 15 A blade configurations for use on nominal 120 or 240 V branch circuits, and (2) cord- and-plug-connected units provided with a 15 or 20 A attachment plug configuration. Units may also be provided with a direct-current input jack for being powered from a vehicle battery adapter or from a data port associated with information technology equipment.

These units utilize an isolating transformer and may incorporate components to provide an alternating- or direct-current output. These products have been investigated only for general use (unless otherwise marked) in unclassified locations. Each output complies with Class 2 voltage, current and volt-ampere limits as specified in ANSI/NFPA 70, “National Electrical Code.” Maximum output voltage does not exceed 42.4 V peak for alternating current, 60 V for continuous direct current.

Power supplies identified with an enclosure type designation or as “Rain tight” or “Rainproof” are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AA2). Class 2 power units intended for use with specific end-use product types that may involve mechanical hazards (such as gardening appliances or tools) are covered as part of the certified appliance or tool.

PRODUCT MARKINGS

If indicated for a specific end use in the individual certifications (such as for use with audio, radio, and television-type equipment), the products are so marked and have also been investigated to additional requirements found in the appropriate end-use product standard.

Class 2 power units marked “Backfeed Protected” (or “BFP”) or equivalent incorporate integral protection to inhibit backfeed of current from the load during a fault in the output circuit or wiring of the power unit.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Class 2 Battery Charger
- Class 2 Power Supply
- Class 2 Power Unit
- Class 2 Transformer
- Class 2 Battery Charger

Other product identities may be used as shown in the individual certifications.

The word “Transformer” may be abbreviated “XFMR,” “XFMR” or “XFORMER.”

RELATED PRODUCTS

Class 2 power units intended for permanent electrical connection to the supply source are covered under Power Supplies, Specialty (QQB) or Transformers, Class 2, Class 3 (XOKV). Class 2 transformers with a cord and plug for connection to the electrical supply are also covered under Transformers, Class 2, Class 3 (XOKV).

Class 2 power units intended for use with medical and dental equipment are covered under Power Supplies for Use in Health Care Facilities (KFCG). Class 2 power units intended as components of fire-protective signaling systems and burglary-protective signaling systems are covered under their respective categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AA2).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Class 2 Power Supplied.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
DISPENSING DEVICES (EPWR)

This category covers dispensing devices intended for flammable and combustible liquids and LP-gas in the liquid stage. Flammable and combustible liquids include the common gasoline and diesel engine fuels and the lighter heating oils.

These devices are intended for use in accordance with the applicable Standards of the National Fire Protection Association, including ANSI/NFPA 30, “Flammable and Combustible Liquids Code,” and ANSI/NFPA 58, “Liquefied Petroleum Gas Code.”

DISPENSING-DEVICE ACCESSORIES (EQJZ)

Control, Monitoring and Auxiliary Equipment (EQXX)

USE AND INSTALLATION

This category covers equipment intended for use in service station environments for the control and monitoring of flammable liquid and LP-gas dispensing devices and related delivery systems, and is intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

Control and monitoring equipment includes products such as transmitters, receivers, pressure actuators, power reset units and money acceptance consoles used in the assembly of or in conjunction with dispensing devices to initiate, record, program, actuate or monitor the operation of the dispensing device or remotely located accessories.

Monitoring equipment also includes products intended to monitor aboveground and underground fuel storage tanks, monitoring the equipment in use, and to monitor aboveground and underground fuel storage tanks, related piping and the surrounding environment for leaks.

This category also covers auxiliary equipment not intended to control or monitor dispensing devices, used in unclassified (ordinary) locations over or adjacent to Class I, Group D, Division 2 hazardous (classified) locations.

These devices are intended for use in unclassified locations that may or may not be over a hazardous (classified) location, as indicated in the individual certifications.

This category does not cover safety or emergency controls that automatically or manually interrupt the operation of a dispensing device.

When the product is intended for use with specifically identified equipment, this is shown in the installation instructions or marking, and in the individual certifications.

REBUILT PRODUCTS

This category also covers control, monitoring and auxiliary equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt control, monitoring and auxiliary equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts.

Rebuilt control, monitoring and auxiliary equipment is subject to the same requirements as new control, monitoring and auxiliary equipment.

FACTORS NOT INVESTIGATED

The leak-detection capability of these products has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Control Console
Interconnection Box

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices (EPWR) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1238, “Control Equipment for Use With Flammable Liquid Dispensing Devices.”

UL MARK

The Certification Mark of UL on the major component of the assembly is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Control Console” or “Interconnection Box,” or other appropriate product name as shown in the individual Listings.

DISPENSING DEVICES (EPWR)

Control, Monitoring and Auxiliary Equipment (EQXX)—Continued

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

When the product is intended for use with specifically identified equipment, this is shown in the installation instructions or marking, and in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Assemblies (ERKQ)

USE

This category covers retrofit assemblies, which are field-installed systems intended to convert equipment or conventional power-operated dispensing devices for operations, such as, but not limited to, automatic preset operation, self-service operation or operation for use with vapor recovery or processing systems. Such assemblies converted for self-service operation may also include the control and monitoring devices and their accessories normally associated with self-service dispensing systems. The type of system is indicated in the individual certifications.

These assemblies require special installation precautions and are listed by Report. Under this form of certification, a Report is prepared that identifies and describes the complete assembly and includes instructions for proper installation. Copies of the Report are available from the Lists.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

Automatic Preset Retrofit Assembly
Self-service Retrofit Assembly
Vapor Recovery Retrofit Assembly

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is one of the following:

UL 87, “Power-Operated Dispensing Devices for Petroleum Products”—For products intended for use with gasoline or gasoline/ethanol blends with nominal ethanol concentrations up to 10 percent (gaso- li E10), diesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 5 percent (B5), kerosene, or fuel oil.

UL 87A, “Outline of Investigation for Power-Operated Dispensing Devices for Gasoline and Gasoline/Ethanol Blends with Nominal Ethanol Concentrations Up to 85 Percent (E0 – E85)”—For products intended for use with gasoline or gasoline/ethanol blends with nominal ethanol concentrations up to 85 percent (E85).

UL 87B, “Outline of Investigation for Power-Operated Dispensing Devices for Diesel Fuel, Biodiesel Fuel, Diesel/Biodiesel Blends with Nominal Biodiesel Concentrations Up to 20 Percent (B20), Kerosene, and Fuel Oil”—For products intended for use with diesel fuel, biodiesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene or fuel oil.

UL MARK

The Certification Mark of UL on the major component of the assembly is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following:

WHEN INSTALLED AND USED IN ACCORDANCE WITH UL REPORT, REFERENCE NO. DATED ______

Alternate UL Mark

The Listing Mark on the major component of the assembly includes the following:

UNDERWRITERS LABORATORIES INC. LISTED [PRODUCT NAME]

WHEN INSTALLED AND USED IN ACCORDANCE WITH UL REPORT, REFERENCE NO. DATED ______

Control No.
POWER-OPERATED DISPENSING DEVICES (EWFX)

This category covers power-operated dispensing devices intended primarily for dispensing motor fuels or other flammable or combustible liquids at service stations.

They consist of power-operated pumping units (s) contained in the device or remote from it, strainer(s), metering device(s), valve(s), single or multiple dispensing outlets, etc., with apparatus designed to monitor and control the discharge of liquid. They may comprise complete self-contained units mounted in a suitable pedestal and housing or separate assemblies with controls and other apparatus mounted on a panel or in a pedestal installed remote from pumping unit.

These devices are designed to comply with requirements for installation either inside or outside of buildings.UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flammable Liquid Dispensing Devices, Power Operated (EWTV)

This category covers power-operated dispensing devices. A power-operated dispensing device establishes hazardous locations in and around the product as a result of its design and construction and is not intended to be used in hazardous locations resulting from external factors, such as installation near aboveground tanks, LP gas or CNG dispensers. The dispensing device has Class I, Group D, Division 1 and 2 locations within it such as installation near aboveground tanks, LP gas or CNG dispensers. Dispensers with nonhazardous areas within them are not suitable for use in a Division 2 location that is based on external factors. Dispensers suitable for use in Division 2 locations that are based on external factors are marked to identify this use.

These products are intended for use with gasoline or diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene, or fuel oil. Diesel/biodiesel blends with nominal biodiesel concentrations up to 85 percent (E85) — For products intended for use with gasoline or diesel/biodiesel blends with nominal ethanol concentrations up to 85 percent (E85).

UL 87, “Power-Operated Dispensing Devices for Petroleum Products” — For products intended for use with gasoline or diesel/biodiesel blends with nominal ethanol concentrations up to 10 percent (gasohol, E10), diesel fuel, diesel/biodiesel blends with nominal ethanol concentrations up to 5 percent (B5), kerosene, or fuel oil.

UL 87A, “Outline of Investigation for Power-Operated Dispensing Devices for Gasoline and Gasoline/Ethanol Blends with Nominal Ethanol Concentrations (E0 – E85)” — For products intended for use with gasoline or diesel/biodiesel blends with nominal ethanol concentrations up to 85 percent (E85).

UL 87B, “Outline of Investigation for Power-Operated Dispensing Devices for Diesel Fuel, Diesel/Biodiesel Blends with Nominal Biodiesel Concentrations Up to 20 Percent (B20), Kerosene, and Fuel Oil” — For products intended for use with diesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene or fuel oil.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power-operated Dispensing Device for Flammable Liquids” or “Power-operated Dispensing Device for Flammable Liquids for Use in Class I, Group D, Division 2 Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lp-gas Dispensing Devices, Power Operated (EXHT)

This category covers power-operated dispensing devices intended to be installed outside of buildings and used at service stations for dispensing liquefied petroleum gas as an engine fuel. These products are intended for installation and use in accordance with ANSI/NFPA 58, “Liquefied Petroleum Gas Code,” and ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY

The following product identity appears on the product: Power-operated Dispensing Device for LP-Gas

ADDITIONAL INFORMATION

For additional information, see Power-operated Dispensing Devices (EWFX) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is one of the following:

UL 87, “Power-Operated Dispensing Devices for Petroleum Products” — For products intended for use with gasoline or diesel/biodiesel blends with nominal ethanol concentrations up to 10 percent (gasohol, E10), diesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 5 percent (B5), kerosene, or fuel oil.

UL 87A, “Outline of Investigation for Power-Operated Dispensing Devices for Gasoline and Gasoline/Ethanol Blends with Nominal Ethanol Concentrations (E0 – E85)” — For products intended for use with gasoline or diesel/biodiesel blends with nominal ethanol concentrations up to 85 percent (E85).

UL 87B, “Outline of Investigation for Power-Operated Dispensing Devices for Diesel Fuel, Diesel/Biodiesel Blends with Nominal Biodiesel Concentrations Up to 20 Percent (B20), Kerosene, and Fuel Oil” — For products intended for use with diesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene or fuel oil.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power-operated Dispensing Device for Flammable Liquids” or “Power-operated Dispensing Device for Flammable Liquids for Use in Class I, Group D, Division 2 Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL LAMP DISPOSAL SYSTEMS (EUYQ)

USE AND INSTALLATION

This category covers commercial-use lamp disposal systems for reducing the volume of debris from expired light bulbs by mechanical breaking and/or crushing prior to disposal. Systems may also utilize heat, vacuum, and/or air-filtering systems to assist in the disposal process. They are provided with means to collect and empty the lamp debris on a periodic basis. They are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.” These systems are motor operated and are provided with overcurrent- or overheating-protective devices.

Commercial-use lamp disposal systems are intended to be installed and maintained by competent personnel who are fully instructed concerning the hazards involved.

FACTORS NOT INVESTIGATED

Some lamps contain particulates of mercury or other materials necessary for operation of the lamp. Commercial lamp disposal systems covered under this category may include features to contain, treat, monitor, filter, or reduce certain emission of these particulates during the disposal process. The effectiveness of these features has not been investigated. Installation, operation and compliance with federal and local environmental, air quality, and waste-disposal codes for the types of products being handled by the devices must be considered by the equipment owner, installer, user and Authority Having Jurisdiction.

RELATED PRODUCTS

See: Household Trash Compactors (XUUM), Commercial Trash Compactors (XUUC), Waste Disposers (ZDHX), Incinerators, Special Type (NEG), Paper shredders for home or office use are covered under Information Technology Equipment, Including Electrical Business Equipment (NWGQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 73, “Motor-Operated Appliances,” in addition to the requirements contained in UL Certification Requirement Decision for Commercial Lamp Disposal Systems (dated April 23, 2013).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Commercial Lamp Disposal System.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FCHD)

PHOTOVOLTAIC CHARGE CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (FCJC)

USE AND INSTALLATION

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

Photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” including Article 690.

These products include photovoltaic charge controller subassemblies for field installation in a specific terminal compartment in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed or the electrical rating parameters (e.g., Vmp and Isc) of the modules with which they are to be used. The terminal compartments, modules and subassemblies are products of the same manufacturer.

PRODUCT INFORMATION

One of the following product identities appears on the product:

Photovoltaic Charge Controller for Use in Hazardous Locations
Photovoltaic Charge Controller Subassembly for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 1741, “Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate Ul Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Charge Controller for Use in Hazardous Locations” or “Photovoltaic Charge Controller Subassembly for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS FOR USE IN HAZARDOUS LOCATIONS (FCJU)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames.

Roof-mounted modules and panels are investigated for one of the three mounting methods: (1) integral to the roof of a building, (2) directly on a building’s roof, or (3) on a rack with a space above the roof surface. When mounted integral to a building’s roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building’s waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building’s roof member. Rack-mounted styles may also be installed separately from buildings.

Installation of modules on or integral to a building’s roof system may adversely affect the roof-covering materials’ resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material. Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules and panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection...
Photovoltaic Modules and Panels for Use in Hazardous Locations (FCU) – Continued

between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code.” Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES
When applicable, modules and panels are marked “Class A,” “Class B” or “Class C,” to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TCFU).

PRODUCT IDENTIFICATION
One of the following product identities appears on the product:

Photovoltaic Module for Use in Hazardous Locations
Photovoltaic Panel for Use in Hazardous Locations

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Some products covered under this category have also been investigated to one or more of the following IEEE and/or IEC design qualification standards:

1. IEEE 1262, “IEEE Recommended Practice for Qualification of Photovoltaic (PV) Modules”
2. IEC 61215, “Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval”
3. IEC 61646, “Thin-Film Terrestrial Photovoltaic Modules – Design Qualification and Approval”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products that have also been investigated to IEEE and/or IEC design qualification standards are marked with one or more of the following statements:

ALSO CERTIFIED TO IEEE 1262-[issue date]
ALSO CERTIFIED TO IEC 61215-[issue date]
ALSO CERTIFIED TO IEC 61646-[issue date]

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Module for Use in Hazardous Locations” or “Photovoltaic Panel for Use in Hazardous Locations.”

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC or IEEE design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH * *, where “* *” is one or more of the following:

1. IEEE 1262-[issue date]
2. IEC 61215-[issue date]
3. IEC 61646-[issue date]

* * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTION EQUIPMENT, RACK MOUNTED (FCKA)

This category covers distribution equipment intended to be mounted in an audio/video, information and communication technology equipment cabinet, enclosure and rack system. These units may include distribution equipment typically located in enclosed panelboards, but provided in an enclosure that is intended for mounting in a rack system. These units are intended to be permanently installed and connected by wiring methods other than flexible cords and cables.

Distribution equipment to which devices (circuit breakers, switches, etc.) not specifically added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field.

Where the load will continue for three hours or more in normal operation, mold-case circuit breakers and fused switches, other than fused power-circuit devices, are not intended to be loaded to exceed 80% of their current rating unless the device is otherwise marked.

Some distribution equipment may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

Some distribution equipment, constructed with interlocked main switching and overcurrent-protective devices, have been investigated for use in optional standby systems in accordance with Article 702 of ANSI/NFPA 70, “National Electrical Code” (NEC), and are marked, “Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70,” or, if provided within kit form, “Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70 when provided with interlock kit Cat No. .”

Conductor Terminations
These units are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors as well as copper conductors, the unit is marked “Use Copper or Aluminum Wire.” Distribution equipment employing terminals or main or branch-circuit units, individually marked “Cu-Al,” is marked as noted above or “Use Copper Wire Only.” The latter statement indicates that wiring space or other factors make the distribution equipment unsuitable for aluminum conductors.

Unless the unit is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.15(B)(16) of the NEC: Termination provisions are determined based on values provided in Table 310.15(B)(16), with no adjustment made for correction factors.

Short-circuit Rating
Distribution equipment is marked with a short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the unit may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the unit. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the distribution equipment according to the marked instructions.

Service Equipment Marking
Some distribution equipment is suitable for use as service equipment and may be marked. If the acceptability of use as service equipment depends upon the condition of installation or use, the unit is marked to indicate those conditions. Units constructed with the grounded conductor factory bonded to the frame or enclosure are marked “Suitable Only for Use as Service Equipment.”

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Rack-mounted Distribution Equipment

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, “Panelboards,” in addition to the requirements contained in UL 2416, “Outline of Investigation for Audio/Video, Information and Communication Technology Equipment Cabinet, Enclosure and Rack Systems.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

* * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
DOOR OPERATORS FOR USE IN HAZARDOUS LOCATIONS (FCQU)

GENERAL
This category covers door operators for fire doors intended for installation with ANSI/NFPA 80, “Fire Doors and Other Opening Protectives.”

They are intended for single-slide and center-parting and inclined-track fire doors. These devices consist of an electric-powered operator that opens and closes the door during normal usage and a mechanical release which, under fire conditions, disconnects the door from the powered operator and permits it to close by either a certified sliding-door closer or a system of suspended weights.

PRODUCT IDENTITY
The following product identity appears on the product:
Door Operator for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic unclassified locations standard used to investigate products in this category is ANSI/UL 325, “Door, Drapery, Gate, Louver, and Window Operators and Systems.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Door Operator for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOOR, DRAPERY, GATE, LOUVER AND WINDOW OPERATORS AND SYSTEMS (FDDR)

GENERAL
This category covers electrical and pneumatic door and gate systems, and door, drapery, gate, louver, window and turnstile operators, together with controls and accessories for use with such operators, and similar devices.

This category covers door operators that have been investigated from an electrical and casualty viewpoint only. For door operators that have been additionally investigated for use on fire doors, see Fire Door Closers, Holders and Operators (GTBT).

This category does not cover the glass portions of the partitions, panels, or sections, associated with the operators and/or controls, unless indicated in the individual certifications.

Door and gate systems include doors or gates, operators and controls, tested as complete units. Components of a system are specifically designated in the installation instructions provided with the system.

Residential door operators are intended for intermittent use on counterbalanced doors, usually of the overhead type, in residential buildings of one to four single-family occupancies. When provided, external entrapment-protection devices, such as photoelectric sensors or door-edge sensors, should be installed in accordance with the installation instructions provided. In addition, all installation instructions, including the installation of warning labels adjacent to the wall-mounted actuating switch, should be followed.

Accessories for residential garage door operators, such as external entrapment-protection devices, should be installed and used only on door operators for which they are intended as marked on the installation instructions and/or packaging.

Commercial and industrial door operators are not intended to be installed in applications where the load exceeds the maximum power in foot-pounds per second or the maximum pull in pounds marked on the appliance. Light-duty, commercial vehicular door or door operators are not intended to be installed in locations where the number of operations per hour exceed that marked on the appliance.

 Operators intended for use with other than counter-balanced types of doors, gates or windows are tested in conjunction with the doors, gates or windows for which they are designed.

Residential drapery operators are intended for intermittent use, controlling a maximum drapery weight of one pound per foot, unless otherwise marked.

Commercial drapery operators are intended for intermittent use, controlling drapery of the maximum weight marked on the assembly.

Vehicular gate and vehicular barrier operators have been investigated for use in one or more of the following usage applications. The classes for which they have been investigated are permanently marked on each operator.

CLASS I — A vehicular gate operator (or system) intended for use in a one of home to four single-family dwellings, or an associated garage or parking area.

CLASS II — A vehicular gate operator (or system) intended for use in a commercial location or building, such as a multifamily housing unit, hotel, garage, retail store, or other building servicing the general public.

CLASS III — A vehicular gate operator (or system) intended for use in an industrial location or building, such as a factory or loading dock area, or other location not intended to service the general public.

CLASS IV — A vehicular gate operator (or system) intended for use in a guarded industrial location or building, such as an airport security area or other restricted access location not servicing the general public, in which unauthorized access is prevented via supervision by security personnel.

It has been determined that the casualty hazards inherent in the products covered under this category have been reduced to an acceptable degree; however, the ultimate safety is dependent upon proper installation. Authorities Having Jurisdiction should be consulted prior to installation. Installation should be performed by a qualified installer using the manufacturer’s instructions. Special care should be exercised during installation of all operators to ensure that recommended safety devices, such as photoelectric sensors or reversing-edge switches, are properly installed.

When so marked, industrial door operators should be mounted a minimum of 8 ft (2.44 m) above the floor.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Door Operator
Drapery Operator
Gate Operator
Louver Operator
Window Operator

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
This category does not cover door operators incorporated as integral parts of walk-in panel units for use with refrigerator cooler installations; see Door Panel Assemblies (FDT).

This category does not cover door or gate systems or other assemblies including break-out or hinged sections intended to facilitate safe egress of persons in case of emergency; see Exit Doors (FUXV), Panic Hardware (FVSS), Fire Door Closers, Holders and Operators (GTBT) and Fire Door Operators with Automatic Closers (GUJY).

This category does not cover the burglary- and theft-protection features of vault doors or burglary-resistant, electrically operated door mechanisms intended to control the opening and closing of cell doors in a prison or institution; see Burglary-resistant, Electrically Operated Door-locking Mechanisms (CVXJ) and Vault Doors, Burglary Resistant (YUSR).

This category does not cover industrial control panels used for motor-control functions; see Motor Controllers, Magnetic (NLDX).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS
The basic standard used to investigate products in this category, except turnstile operators, is ANSI/UL 325, “Door, Drapery, Gate, Louver, and Window Operators and Systems.”

The basic standard used to investigate products in this category, except turnstile operators, is ANSI/UL 325, “Door, Drapery, Gate, Louver, and Window Operators and Systems.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and
DOOR, DRAPERY, GATE, LOUVER AND WINDOW OPERATORS AND SYSTEMS (FDDR)

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Door Operator,” “Gate Operator,” “Drapery Operator,” “Window Operator,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOOR HOLDERS FOR USE IN HAZARDOUS LOCATIONS (FDGF)

GENERAL

This category covers door holders for fire doors intended for installation in accordance with ANSI/NFPA 80, “Fire Doors and Other Opening Protectives.” They are intended for use with swinging, sliding or rolling fire doors, as indicated in the individual certifications, and are designed to hold doors in the open position under normal usage and release the doors under fire conditions. They are intended to be used with a suitable door closer and automatic operating devices or systems.

Authorities Having Jurisdiction should be consulted to determine the acceptability of the door, door holders, door closer and automatic operating device or other combination of system units for any given location.

PRODUCT IDENTIFY

The following product identity appears on the product:

**Door Holder for Use in Hazardous Locations**

**RELATED PRODUCTS**

Automatic operating devices or systems consist of releasing devices of heat detectors for releasing device service and are covered under Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR).

**ADDITIONAL INFORMATION**

For information on door closers, see Fire Door Accessories (GVUW) and Fire Door Closers, Holders and Operators (GTBT).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Door Panel Assembly” or “Auxiliary Insulated Panel.”

**PRODUCT IDENTIFY**

This category covers walk-in” and “reach-in” door panel assemblies and related auxiliary devices intended for use with environmental, freezer or cooler rooms and cabinets.

DOOR PANEL ASSEMBLIES (FDIT)

The equipment is intended for permanent connection to alternating-current circuits rated at not more than 600 V.

Panel assemblies and auxiliary devices are provided with an electrical system which serves to provide one or more of the following functions: illumination, prevention of ice formation, prevention of condensation, motor drives for opening and closing doors, etc.

Auxiliary devices consist of the door and/or the door frame. Auxiliary devices consist of door frames and associated with the foregoing apparatus or functions, including insulated panels with electrical components.

Door panel assemblies identified with an enclosure type designation or as “Rain tight” or “Rainproof” are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

**PRODUCT IDENTIFY**

One of the following product identities appears on the product:

- Auxiliary Insulated Panel
- Door Panel Assembly

**RELATED PRODUCTS**

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW). Nonelectrical insulated wall panels are covered under Building Units (BLBT). Refrigeration units are covered under Units, Refrigerating (SPYZ). Factory-assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 471, “Commercial Refrigerators and Freezers.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Door Panel Assembly” or “Auxiliary Insulated Panel.”

**PRODUCT IDENTIFY**

This category covers products specifically intended for installation on oil rigs and drilling platforms.

**DRILLING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FDJJ)**

**USE AND INSTALLATION**

This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

This category also covers equipment intended for use on drilling equipment, or for use with equipment associated with the drilling process, including solenoids and valves.

**PRODUCT IDENTIFY**

One of the following product identities appears on the product:

- Drilling Instrumentation for Use in Hazardous Locations
- Drilling Instrumentation (Associated Apparatus)
Marine Shipboard Cable Fittings for Use in Zone Classified Hazardous Locations (FDJZ)

This category covers products specifically intended for installation on oil rigs and drilling platforms.

DRILLING INSTRUMENTATION AND CONTROL FOR USE IN HAZARDOUS LOCATIONS (FDXX)

This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

USE AND INSTALLATION
This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

REQUIREMENTS
The basic hazardous (classified) locations standard used to investigate products in this category is UL 61010-1, “Process Control Equipment,” UL 429, “Electrically Operated Valves,” or Part I of ANSI/UL 508, “Industrial Control Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The UL Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Marine Shipboard Cable Fitting for Use in Hazardous Locations,” or “Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
MARINE SHIPBOARD CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS (FDLW)

This category covers combination termination and sealing fittings for threaded connection of marine shipboard cable to equipment in hazardous locations. They are intended for use only with the sealing compound specified by the manufacturer in instructions furnished with the fittings. No splices of conductors are permitted to be made in the fitting, and restrictions on application, position, and/or location of the sealing fitting are indicated in the manufacturer's instructions.

PRODUCT IDENTITY

The following product identity appears on the product:

Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAHZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 2225, “Cables and Cable Fittings for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

Ansi Z21.70

EARTHQUAKE-ACTUATED AUTOMATIC GAS SHUTOFF SYSTEMS

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "LISTED," a control number, and the product name "Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EARTHQUAKE-ACTUATED EQUIPMENT (FFPC)

USE AND INSTALLATION

This category covers products with earthquake-sensing means that shut off gas flow or disconnect an electrical load from its source in the event of a seismic disturbance.

Earthquake-actuated gas-shutoff valves are intended for stationary installation and marked with the specific fluids, fluid temperature, ambient temperature and operating pressure.

Earthquake-actuated electrical switches are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

Earthquake-actuated Electrical Switch

Earthquake-actuated Gas-shutoff Valve

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

See Earthquake-actuated Shutoff Systems (FFPH).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ), Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate earthquake-actuated gas-shutoff valves in this category is ANSI Z21.70 (1981), "Earthquake Actuated Automatic Gas Shutoff Systems."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

See Earthquake-actuated Equipment (FFPC).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ), Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate earthquake-actuated gas-shutoff valves in this category is ANSI Z21.70 (1981), "Earthquake Actuated Automatic Gas Shutoff Devices."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:
EARTHQUAKE-ACTUATED SHUTOFF SYSTEMS (FFPH)

EARTHQUAKE-ACTUATED AUTOMATIC GAS SHUTOFF DEVICES
Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, one of the following product names, as appropriate: “Earthquake Actuated Gas Shutoff System,” “Earthquake Actuated Gas Shutoff Valve,” “Earthquake Actuated Electrical Switch” or other appropriate product name as shown in the individual Listings, and “IN ACCORDANCE WITH ASCE 25, Earthquake-Actuated Automatic Gas Shutoff Devices.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC VEHICLE SYSTEMS (FFQM)

ELECTRIC VEHICLE CABLE (FFSO)

GENERAL

This category covers electric vehicle cable constructed as described in, and certified for use in accordance with Article 400 of ANSI/NFPA 70, “National Electrical Code,” Electric vehicle cable consists of two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermostom on Types EVJ and EV, thermoplastic elastomer (TPE) on Types EVJE and EVT, and thermoplastic (PVC) on Types EVJT and EVT.

The cable is used to supply power, signal, and control to electric vehicles during the charging process. It is rated 60°C (140°F) wet; 60°C (140°F) where exposed to oil, and for use where the recharging of storage batteries have not been investigated.

FACTORS NOT INVESTIGATED

The physiological effects of chemical substances or gases associated with the recharging of storage batteries have not been investigated.

ELECTRIC VEHICLE CABLE (FFSO) — Continued

This category covers electric vehicle cable constructed as described in, and certified for use in accordance with Article 400 of ANSI/NFPA 70, “National Electrical Code,” Electric vehicle cable consists of two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermostom on Types EVJ and EV, thermoplastic elastomer (TPE) on Types EVJE and EVT, and thermoplastic (PVC) on Types EVJT and EVT.

The cable is used to supply power, signal, and control to electric vehicles during the charging process. It is rated 60°C (140°F) wet; 60°C (140°F) where exposed to oil, and for use where the recharging of storage batteries have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Electric Vehicle Battery Charger
- Electric Vehicle Charge Port
- Electric Vehicle Charging System Equipment
- EV Battery Charger
- EV Charge Controller
- EV Charge Port
- EV Charging System Equipment

Other product identities may be used as shown in the individual certifications, preceded by the words “Electric Vehicle” (or “EV”).

RELATED PRODUCTS

See Battery Chargers, Automotive Type (BBGQ).

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The standard basic used to investigate products in this category is ANSI/UL 2202, “Electric Vehicle (EV) Charging System Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Charging System Equipment,” “Battery Charger,” “Charge Port,” “Charge Controller,” or other appropriate product name as shown in the individual Listings, preceded by “Electric Vehicle” (or “EV”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
This category covers conductive service and production charging system equipment intended for use with electric vehicle (EV) batteries. The equipment is located off board the vehicle and is intended to connect to the battery in order to provide charging current for production line testing, production line initial charging, or diagnostics and testing during servicing. All equipment is intended for indoor use.

Products covered under this category are not intended to be used for the public access charging of electric vehicles. Although the devices could provide a full charge to an EV battery, that is not their primary function or intended use. The devices are used by trained individuals associated with a given function such as production line or service functions.

This equipment is rated 600 V or less. The equipment is intended to be connected to the vehicle by means of a flexible cord and a suitable and appropriate connector, and intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Vehicle Production Charger
- Electric Vehicle Service Charger
- Electric Vehicle Service/Production Charger
- EV Production Charger
- EV Service Charger
- EV Service/Production Charger

**RELATED PRODUCTS**

See Battery Chargers, Automotive Type (BBGQ), Electric Vehicle Charging System Equipment (FFTG) and Electric Vehicle Supply Equipment (FFWA).

**ADDITIONAL INFORMATION**

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL 2871, “Outline of Investigation for Electric Vehicle (EV) Service and Production Changers.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**ON-BOARD ELECTRIC VEHICLE EQUIPMENT (FFRA)**

**USE AND INSTALLATION**

This category covers battery packs investigated in accordance with Article 625 of ANSI/NFPA 70, “National Electrical Code” (NEC), to determine whether or not a forced-air ventilation system is required when a particular electric vehicle battery pack is charged using the specified charging system of the electric vehicle.

**REBUILD PRODUCTS**

This category also covers electric vehicle battery packs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt electric vehicle battery packs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt electric vehicle battery packs are subject to the same requirements as new electric vehicle battery packs.

The following product identity appears on the product:

- Electric Vehicle Battery Pack

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

Electric vehicle battery packs employing non-vented batteries or batteries whose chemical energy cannot produce hydrogen are investigated by inspection of the manufacturer’s product.

Electric vehicle battery packs employing batteries that can emit hydrogen, such as valve-regulated or vented lead-acid or nickel-metal hydride batteries, are subjected to investigation in accordance with SAE Recommended Practice J1718 (1994), “Measurement of Hydrogen Gas Emission From Battery-Powered Cars and Light Trucks During Battery Charging.” Battery systems which do not produce hydrogen concentrations in excess of 1% (25% of the lower flammability limit) are considered in compliance with the requirements of Article 625 of the NEC.
ON-BOARD ELECTRIC VEHICLE EQUIPMENT (FFZA)

Electric Vehicle Battery Packs (FFRW)–Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR CHARGING INDOORS WITHOUT MECHANICAL BUILDING VENTILATION IN [Company name] ELECTRIC VEHICLE [model, name]

Alternate UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRIC VEHICLE BATTERY PACK FOR CHARGING INDOORS WITHOUT MECHANICAL BUILDING VENTILATION IN [COMPANY NAME] ELECTRIC VEHICLE [MODEL NAME]

Control No.

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name. ****************************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRACTION MOTORS (FFWT)

USE AND INSTALLATION

This category covers motors intended as the prime mover and installed in or on vehicles for highway use, such as passenger automobiles, buses, trucks, vans, bicycles, motorcycles and the like.

These motors have been investigated for construction and operation at rated output. They have additionally been investigated for the severity and profile of shock and vibration likely to be encountered by motors mounted in road vehicles.

This information, together with other conditions of use, such as mounting position, are marked on the product and/or detailed in the manufacturer’s installation instructions furnished with the product.

PRODUCT IDENTITY

The following product identity appears on the product:

Traction Motor

RELATED PRODUCTS

See:

Electric Vehicle Battery Packs (FFRW)
Electric Vehicle Cable (FFSO)
Electric Vehicle Charging System Equipment (FFTG)
Electric Vehicle Supply Equipment (FFWA)
Power Converters/Inverters for Use in Electric Land Vehicles (FFZS)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1004-1, “Rotating Electrical Machines – General Requirements.”

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, “Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO CONSTRUCTION AND OPERATION AT RATED OUTPUT

Traction Motors (FFWT)–Continued

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRACTION MOTOR

AS TO CONSTRUCTION AND OPERATION AT RATED OUTPUT

Control No.

********************************************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CONVERTERS/INVERTERS FOR USE IN ELECTRIC LAND VEHICLES (FFZS)

USE AND INSTALLATION

This category covers power converters and power inverters intended for use in electric vehicles.

An electric vehicle is defined as an automotive-type vehicle for over-the-road use, such as passenger automobiles, buses, trucks, vans, neighborhood electric vehicles, and the like, primarily powered by a combustion engine, an electric motor, or both, and draws current from a rechargeable storage battery, fuel cell, photovoltaic array, or other source of electric current.

This category covers fixed and stationary power converters having a nominal rating of 1000 V or less, direct or alternating current. This category also covers fixed, stationary and portable power inverters having a dc input and a 120 or 240 V ac output. These converters/inverters are intended for use within electric land vehicles where not directly exposed to outdoor conditions.

This category also covers converters/inverters that are additionally intended to charge batteries.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Electric Vehicle Power Converter
Electric Vehicle Power Inverter
EV Power Converter
EV Power Inverter

RELATED PRODUCTS

See Electric Vehicle Battery Packs (FFRW) and Traction Motors (FFWT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 458A, “Outline of Investigation for Power Converters/Inverters for Electric Land Vehicles.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Vehicle Power Converter” or “Electric Vehicle Power Inverter.” The term “Electric Vehicle” may be abbreviated “EV.”

********************************************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. ELECTRICAL CIRCUIT INTEGRITY SYSTEMS (FHIT)

GENERAL

LOOK FOR THE UL MARK ON PRODUCT
This category covers electrical circuit integrity systems consisting of components and materials intended for installation as protective or fire-resistive systems, with respect to the disruption of electrical circuit integrity upon exterior fire exposure.

Ratings apply only to the entire system assembly, constructed using the combination of components and materials specified in the individual system. Components and materials are designated for use in a specific individual system for which corresponding ratings have been developed, and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials.

Electrical circuit integrity systems are intended to be fastened to a concrete or masonry wall or a concrete floor-ceiling assembly. The fire rating of the wall or floor-ceiling assembly is intended to be equal to or greater than the rating of the electrical circuit integrity system. This is to ensure that the complete electrical circuit integrity system will survive during fire and hose stream exposure.

**SYSTEMS INCORPORATING CABLE PROTECTED WITH ELECTRICAL CIRCUIT PROTECTIVE MATERIALS**

These electrical circuit integrity systems are investigated with respect to fire exposure and water hose stream performance. Performance criteria are based on temperatures within the enclosure and visual examination after the water hose stream.

These systems are intended to be installed in interior environments with representative heating and air conditioning, unless stated otherwise in the individual system.

Where indicated in the system, the ampacity reduction due to the electrical protection system has been determined for normal temperature rise exposure in accordance with IEEE 848 (1996), "IEEE Standard Procedure for the Determination of the Ampacity Derating of Fire-Protected Cables." If not specified in the system, the effect of the electrical circuit protection system on the ampacity of the electrical conductors has not been investigated. The specifications for the system and its assembly are important details in the development of the ratings. Information concerning these details is described in each system.

The products used in these systems are intended to be installed in accordance with all the provisions of ANSI/NFPA 70, "National Electrical Code," and as amended by the details of each individual system (such as type of supports) and the accompanying instructions.

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these systems.

**SYSTEMS CONSTRUCTED WITH FIRE-RESISTIVE CABLE**

These electrical circuit integrity systems are investigated with respect to fire exposure and water hose stream performance. Performance criteria are based on functionality of the cable during the fire and after the water hose stream.

These systems are intended to be installed in accordance with all provisions of the NEC and as amended by the details of each individual system (such as type of supports) and the accompanying instructions.

 Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these systems.

**RELATED PRODUCTS**

See Electrical Circuit Protective Materials (FHIY).

See Fire-resistive Cable (FHJR).

**ADDITIONAL INFORMATION**

For additional information, see Fire-resistance Ratings (BXRH).

**REQUIREMENTS**

The basic requirements used to investigate systems incorporating cable protected with electrical circuit protective materials in this category are contained in UL Subject 1724, "Outline of Investigation for Fire Tests for Electrical Circuit Protective Systems."

The basic standard used to investigate systems constructed with fire-resistant cable in this category is ANSI/UL 2196, "Tests for Fire Resistive Cables."

**UL MARK**

System components identified by an (*) in the description text are Classified under the Classification and Follow-Up Service of UL. Such components and names of manufacturers who are authorized to apply the Classification Mark are identified under the specific product category.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTRICAL CIRCUIT PROTECTIVE MATERIALS (FHIY)**

This category covers electrical circuit protective materials of proprietary composition, intended for installation in accordance with the application instructions provided with the product and as specified on the design card for an individual electrical circuit protective system. Properties of these materials, other than the degree of fire resistance provided to specific electrical wiring systems, have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTIFIER**

The following product identity appears on the product: Electrical Circuit Protective Material

**ADDITIONAL INFORMATION**

For additional information, see Fire-resistance Ratings (BXRH).

**SYSTEM NO.**

SEE UL ONLINE CERTIFICATIONS DIRECTORY

**FOR USE IN ELECTRICAL CIRCUIT PROTECTIVE SYSTEMS**

**SYSTEM NO.**

SEE UL BUILDING MATERIALS DIRECTORY

**CONTROL NO.**

**FOR USE IN ELECTRICAL CIRCUIT PROTECTIVE SYSTEMS**

**USE AND INSTALLATION**

This category covers fire-resistant cable, which is insulated electrical cable intended for installation as specified in the individual electrical circuit integrity systems. This cable has been investigated for its ability to remain electrically functional during a fire exposure and after the impact, erosion and cooling effect of a water hose stream test.

There are two fire exposure conditions: normal temperature rise (same as ANSI/UL 2196, "Tests for Fire Resistive Cables") and rapid temperature rise (to ANSI/UL 1709, "Rapid Rise Fire Tests of Protection Materials for Structural Steel"). If not stated otherwise in the individual certifications, the normal temperature rise exposure was used. This cable is required to comply with national requirements for electrical safety in addition to requirements related to its continued operation under fire exposure.

The cable as used in the specified systems has been investigated and found to comply with applicable electrical requirements.

The cable is intended to be installed in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code," where indicated in the system, and the manufacturer's installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTIFIER**

The following product identity appears on the product: Fire-resistive Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Circuit Integrity Systems (FHIY) and Fire-resistance Ratings (BXRH).

**SYSTEM NO.**

SEE UL ONLINE CERTIFICATIONS DIRECTORY

**FOR USE IN ELECTRICAL CIRCUIT PROTECTIVE SYSTEMS**
Electrical Metallic Tubing (FJMX)

General

This category covers electrical metallic tubing (EMT), including lengths of straight tubing and elbows, with or without integral couplings or other integral fittings, manufactured in trade sizes 1/2 to 4 (metric designators 16 to 103) inclusive. EMT is for installation of conductors in accordance with Article 358 of ANSI/NFPA 70, “National Electrical Code” (NEC).

This tubing is intended for installation and use in accordance with the following:

- Galvanized or stainless steel EMT installed in concrete on grade or above generally requires no supplementary corrosion protection. Galvanized steel EMT in concrete slab below grade level may require supplementary corrosion protection.
- In general, galvanized steel EMT in contact with soil requires supplementary corrosion protection. Where galvanized steel EMT without supplementary corrosion protection extends directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.
- Galvanized or stainless steel EMT that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.
- Nonmetallic outer coatings of greater than 0.010-in. thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings, and electrical continuity of the connection of tubing to fittings.
- Galvanized steel EMT with nonmetallic coatings has not been investigated for severely corrosive conditions.
- Aluminum EMT used in concrete or in contact with soil requires supplementary corrosion protection.

Product Identity

One of the following product identities appears on the product:

- Electrical Metallic Tubing
- EMT

Related Products

Fittings certified for use with EMT are covered under Electrical Metallic Tubing Fittings (FKAV) and Conduit Fittings (DWIT).

Additional Information

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Requirements

The basic standards used to investigate products in this category are ANSI/UL 797, “Electrical Metallic Tubing – Steel,” and ANSI/UL 797A, “Electrical Metallic Tubing – Aluminum and Stainless Steel.”

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electrical Metallic Tubing” (or “EMT”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Electrical Drives and Controls for Folding and Telescopic Seating (FHJU)

Use and Installation

This category covers systems used to electrically extend and retract spectator seating and similar applications where motorized movement is needed. These systems consist of one or more drive units, controls, and a system for distributing power to the drive units. The components of the control system include a user interface, a main control panel, overcurrent protective devices for motors, and may include limit switches. Power is needed. These systems are intended for indoor use only.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

For Use in Electrical Circuit Integrity Systems

System No.

See UL Online Certifications Directory

Alternate UL Mark

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Electrical Metallic Tubing (FJMX)

Fire-resistant Cable (FHJR) – Continued

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

For Use in Electrical Circuit Integrity Systems

System No.

See UL Online Certifications Directory

Alternate UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Electrical Metallic Tubing Fittings (FKAV)

General

This category covers electrical metallic tubing fittings such as connectors, couplings and expansion fittings, from 1/2 to 4 (metric designators 16 to 103) inclusive trade sizes, intended for installation and use in accordance with the following information and the limitations specified in Electrical Metallic Tubing (FJMX).

All male threaded fittings have only been investigated for use with locknuts.
Electrical Metallic Tubing Fittings (FKAV)—Continued

**Indenter Fittings** — Indenter-type fittings are for use with metallic-coated electrical metallic tubing only and require a special tool supplied by the manufacturer for proper installation. Diametrically opposed indenter-type tools require two sets of indentations nominally 90° apart. Triple-indent tools require one set of indentations.

**Grounding** — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

**Reusability** — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

**PRODUCT MARKINGS**

Fittings suitable for use in poured concrete or where exposed to rain are so indicated on the device or carton. The term "rain tight," "wet location" or the equivalent on the carton indicates suitability for use where directly exposed to rain. The term "concrete tight" or equivalent on the carton indicates suitability for use in poured concrete.

Fittings have been tested for use only with steel tubing unless marked on the device or carton to indicate suitability for use with aluminum or other material.

**CARTRON MARKINGS**

A fitting that is taped completely (from the raceway to the box, or raceway to raceway) is concrete-tight when the product carton is marked "CONCRETE-TIGHT WHEN TAPED."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Connector
- Coupling
- Electrical-metallic-tubing Fitting
- EMT Fitting
- Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Metallic Tubing (FJMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings." Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certifications.

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the product on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Nonmetallic Tubing." *

**LOOK FOR THE UL MARK ON PRODUCT**

Electrical Nonmetallic Tubing Fittings (FKKY)

**GENERAL**

This category covers electrical-nonmetallic-tubing (ENT) fittings made in trade sizes 1/2 to 2 (metric designators 16 to 53). These fittings are intended for installation and use in accordance with the following information and the limitations specified in Electrical Nonmetallic Tubing (FKHU).

**CARTON MARKINGS**

Unless otherwise marked on the carton, fittings are suitable for use with any certified ENT of the appropriate trade size. If a fitting is suitable for use with only specific manufacturer’s ENT, the smallest unit carton of the fitting identifies the ENT manufacturer(s). This compatibility marking appends any compatibility marking on the fitting carton.

Fittings suitable for use in concrete are identified by a marking on the carton. A fitting that is taped completely (from the raceway to the box, or raceway-to-raceway) is concrete-tight when the product carton is marked "CONCRETE-TIGHT WHEN TAPED."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electrical-nonmetallic-tubing Fitting
- ENT Fitting

**ADDITIONAL INFORMATION**

For additional information, see Electrical Nonmetallic Tubing (FKHU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1653, "Electrical Nonmetallic Tubing."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the product on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.
ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT (FKOT)—Continued

Drivers for Light-emitting-diode Arrays, Modules and Controllers (FKSZ)—Continued

**PRODUCT MARKINGS**

LED drivers are marked with:

- Input voltage, either the supply (line) voltage or a low voltage (ac or dc)
- Input current
- Input wattage, power factor or both (optional)
- Output maximum voltage
- Output current (the maximum current that could be supplied by the driver)
- Output volt-amperes or wattage
- Environmental location (dry, damp or wet)
- Output type (isolated, direct or Class 2)
- Output type (isolated, direct or Class 2)
- Location (dry, damp or wet)

The output type is used in determining the type of compatible LED array, a function of LED array construction. Output type "Isolated" refers to the output being electrically isolated from the supply circuit by insulation. Output types "Direct" or "Non-isolated" refer to the output being electrically derived from the supply circuit without a separation by insulation.

LED drivers marked "Class 2" indicate that the output meets the voltage, current, and insulation criteria specified in ANSI/UL 1310, "Class 2 Power Units," or Article 725 of the NEC, and that Class 2 wiring methods may be used. A driver may have one or more outputs marked "Class 2."

LED drivers are marked for environmental locations as defined in the NEC and Electrical Equipment for Use in Ordinary Locations (AALZ). The marking indicates the following uses:

- **Damp location** — An exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to, electrical equipment, and includes partially protected locations.
- **Wet location** — A location in which water can drip, splash, or flow on or against electrical equipment.

LED drivers rated "wet" are also acceptable for use in luminaires intended for damp and dry locations. LED drivers rated "damp" are also acceptable for use in luminaires intended for dry locations.

Drivers for Light-emitting-diode Arrays, Modules and Controllers (FKSZ)—Continued

**PRODUCT IDENTITY**

The following product identity appears on the product:

- **LED Driver**

**RELATED PRODUCTS**

Power supplies that can be employed as LED drivers may also be covered under:

- Direct-plug-in and Cord-connected Class 2 Power Units (EPBL)
- Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)
- Power Supplies, General Purpose (QQPL) or Power Supplies, Specialty (QQJ)
- Sign Accessories (UYMR2)

LED arrays, modules and controllers are covered under:

- Light-emitting-diode Arrays, Modules and Controllers (OOQA2)
- Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name—"LED Driver."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL NONMETALLIC TUBING (FKHU)
Fluorescent Lamp Ballasts (FKTS)—Continued

minimize incompatibility. (Refer to the particular lighting control category for more information on how the controls are marked regarding tungsten inrush.)

PRODUCT MARKINGS

Ballasts marked “Class P” are intended for use in luminaries or signs and provided with integral protection that prevents ballast overheating. This protection has been investigated to the Class P test program in ANSI/UL 935, “Fluorescent-Lamp Ballasts.”

Ballasts marked “High Power Factor” operate at 90% or higher power factor under the intended operating conditions or otherwise indicate those conditions that result in less than 90% power factor. Ballasts marked “Power Factor Corrected” indicate the value of the power factor.

Ballasts are marked with an output voltage when the output is over 300 V. The output voltage will be the maximum voltage existing between any two lead wires. Ballasts may additionally be marked with the maximum voltage to ground when it would aid in selecting lampholders. The voltage to ground will be the maximum voltage existing in any one lampholder and should be less than the rating of the lampholder.

Ballasts marked “For Use in Portable Lamps” have an output voltage of 150 V or less and are intended for use in portable luminaires without grounding.

Ballasts marked “For Use in Permanently Connected (or Fixed) Equipment Only” are not intended for cord-connected equipment.

Ballasts marked “Type CC” are intended for use in commercial cabinets, either refrigerated or nonrefrigerated, and where the ballast circuit is designed to minimize arcing within the lampholder in the event lamps become loose in their lampholders.

Ballasts marked “Type HL” are intended for use in luminaires in Class I, Division 2 hazardous (classified) locations as defined in Article 500 of the NEC. Ballasts with a nonmetallic enclosure and marked “Suitable for Air Handling Spaces” have enclosures that may be used in environmental air spaces as defined in Section 300.22(C)(3) of the NEC. These products have been investigated in accordance with UL 2043, “Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air Handling Spaces.”

Ballasts suitable for dimming fluorescent lamps are marked to indicate such use and, unless the dimming control leads are marked for connection to a Class 2 limited-energy circuit, the ballast is additionally marked with the catalog number of the dimming control for which the ballast is certified. Fluorescent lamp ballasts are restricted in use as indicated below:

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts:

Type 1 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) outdoor signs if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked “Type 1 Outdoor” or “Type 1.” These ballasts are also suitable for indoor use.

Type 2 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) outdoor signs if the ballasts, in addition to their own enclosure, are within an overall enclosure. Ballasts of this type are marked “Type 2 Outdoor” or “Type 2.” These ballasts are also suitable for indoor use.

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked “Weatherproof” or “WP.” These ballasts are suitable for indoor and outdoor use.

PRODUCT IDENTITY

The following product identity appears on the product:

Fluorescent Lamp Ballast

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts (FLCR). Suitable controls intended for use with ballasts for dimming fluorescent lamps are covered under Dimmers, General Use Switch (EOYX) and Dimmers, Commercial (EOXT).

Ballasts within an integral enclosure with a compact fluorescent lampholder and a bi-pin or screw base are covered under Lamps, Self-Ballasted and Lamp Adapters (OOOL). Devices for controlling electric sign gas tubes are covered under Neon Transformers and Power Supplies (PWIK).

Products Verified for energy efficiency are covered under Fluorescent Lamp Ballasts Verified for Energy Efficiency (ZWMR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Fluorescent Lamp Ballasts (FKTS)—Continued

The basic standard used to investigate products in this category is ANSI/UL 935, “Fluorescent-Lamp Ballasts.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fluorescent Lamp Ballast,” or other appropriate product name as shown in the individual Listings.

HIGH-INTENSITY-DISCHARGE LAMP BALLASTS (FLCR)

GENERAL

This category covers high-intensity-discharge (HID) lamp ballasts. The ballasts are high-frequency electronic, choke (reactor) coil, or transformer of the isolating or auto type, and are for controlling the starting and operating voltages and currents of one or more of the following lamp types: mercury vapor, metal halide, high-pressure sodium and low-pressure sodium. These ballasts are intended for connection in accordance with ANSI/NFPA 70, “National Electrical Code,” to branch circuits rated 600 V or less. The output voltages are 1000 V or less.

PRODUCT MARKINGS

Ballasts intended for remote mounting in recessed installations are: (1) thermally protected, (2) marked “Thermally Protected” or the equivalent, and (3) marked “Suitable for Recessed Use.” These ballasts are intended to be installed in uninsulated or insulated ceilings with all insulation kept a minimum distance of 3 in. from the sides of the ballasts and not placed over the ballasts such that it would entrap the heat produced by the ballasts. The ballasts are provided with thermal protection to deactivate the ballasts should insulation be placed over or in contact with the ballasts.

Ballasts not intended for recessed installations may be provided with thermal protection. If the ballasts are provided with thermal protection, they are marked “Thermally Protected” or the equivalent. The effectiveness of such protection must be investigated in combination with the specific luminaire with which the ballast is used.

HID lamp ballasts are restricted in use as indicated below:

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts:

Type 1 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) an outdoor sign if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked “Type 1 Outdoor” or “Type 1.” These ballasts are also suitable for indoor use.

Type 2 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) an outdoor sign if the ballasts, in addition to their own enclosure, are within an overall enclosure. Ballasts of this type are marked “Type 2 Outdoor” or “Type 2.” These ballasts are also suitable for indoor use.

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked “Weatherproof” or “WP.” These ballasts are suitable for indoor and outdoor use.

PRODUCT IDENTITY

The following product identity appears on the product:

Ballast

Mercury Lamp Ballast
HOLDERS FOR AUTOMATIC STARTERS (FLPZ)

USE
This category covers separate holders for automatic starters that are intended for use with electric discharge (fluorescent) lamps. Unless otherwise noted, they are rated 250 V. All individual listings are included in the Directory, either as manufacturers’ listings or as individual listings.

PRODUCT IDENTITY
The following product identity appears on the product:
Automatic Starter Holder

RELATED PRODUCTS
Holders in combination with or designed to be assembled with lamp holders are covered under Lampholders, Electric Discharge, 1000 V or Less (OKCT).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK
The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK
The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. Alternate UL Mark

UL MARK
The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automatic Starter Holder.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damage, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
This category covers ballasts for special industrial lamps, controls for auxiliary tungsten lamps, electromagnetic interference filters, fluorescent ballast and lamp power reducers, fluorescent lamp life extenders, high-intensity-discharge (HID) lamp high-low dimmers, HID lamp igniters, time-out circuits for HID lamp ballasts, and related devices. These devices are for factory or field installation, in accordance with their installation instructions, into certified luminaires employing discharge lamps.

Fluorescent power-reducer devices are limited to installation only in luminaires employing thermally-protected ballasts, and are marked as such. The devices are designed for high-power-factor rapid-start ballasts, or high-power-factor instant-start ballasts, and marked as appropriate, unless marked for additional ballast types. These devices have not been investigated for use on emergency lighting equipment or with dimming ballasts, unless marked otherwise.

HID lamp high-low dimmers are limited to installation only in or with luminaires employing the lamp wattage and type, together with the ballast type and capacitor rating agreeing with the installation instructions provided with the dimmer.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:
- Ballast EMI Filter
- Bi-level Capacitor Switch
- Bi-level Motion-sensor Power Supply
- Electronic Fluorescent Remote Controller
- HID Lamp-dimming Control
- Partition Switch Control
- Power Converter
- Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts (FKOT).

Devices for controlling fluorescent lamps are covered under Fluorescent Lamp Ballasts (FKVS).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1029, “High-Intensity-Discharge Lamp Ballasts,” or ANSI/UL 935, “Fluorescent-Lamp Ballasts,” or the requirements contained in UL Subject 1029A, “Outline of Investigation for Igniters and Related Auxiliaries for HID Lamp Ballasts.”

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

This category covers light-emitting-diode (LED) drivers providing a regulated output for an LED array or LED module, with or without an LED controller (control module). The output has LEDs connected in parallel or connected in series. LED drivers are intended to be powered from alternating-current-supply branch circuits rated 600 V or less in accordance with ANSI/NFPA 70, “National Electrical Code,” from low-voltage supplies; or from alternative sources, such as batteries, photovoltaic modules or fuel cells. A direct-plug-in, cord-and-plug, or field-wiring compartment is provided for connection to the branch circuit or other supplies.

LED drivers are not intended for recessed installation where direct contact with thermal insulation may occur.

**PRODUCT IDENTITY**

The following product identity appears on the product:
- LED Driver for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 944, “Luminaires for Use in Hazardous (Classified) Locations.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
**Electrical Conductively Corrosion-Resistant Compounds (FOIZ)**

**USE**

This category covers electrically conductive corrosion-resistant compounds for use on the threads of rigid metal conduit (RMC) and intermediate metal conduit (IMC). The compounds resist corrosion and provide electrical conductivity in accordance with Section 300.6(A) of ANSI/NFPA 70, "National Electrical Code", when used in accordance with the manufacturer's installation instructions.

These compounds have not been investigated for use in hazardous (classified) locations.

Reference should be made to the product label located on the smallest unit container for specific instructions as to the proper use of the compound.

**PRODUCT IDENTIFICATION**

- The following product identity applies on the product:
  - Electrically Conductive Corrosion-Resistant Compound

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 2419, "Outline of Investigation for Electrically Conductive Corrosion Resistant Compounds."

**UL MARK**

- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, and the product name “Electrically Conductive Corrosion Resistant Compound.”

**ADDITIONAL INFORMATION**

- UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Electromagnetic Interference Filters (FOKY)**

**GENERAL**

This category covers electromagnetic interference (EMI) filters installed in equipment connected to 1000 V, 50 – 60 Hz or 1500 V, dc or lower potential circuits, and installed in accordance with ANSI/NFPA 70, "National Electrical Code.

Such filters are used to attenuate unwanted radio-frequency signals (such as noise or interference) generated from electromagnetic sources. These filters consist of capacitors and inductors used alone or in combination with each other and may be provided with resistors.

Included in this category are cord-connected filters, direct-plug-in filters and facility filters.

This category does not cover surge-protective devices for repeated limiting of voltage surges on power circuits investigated to ANSI/UL 1449, “Surge Protective Devices.”

**Filter Types**

Filters are designated one of the following types:

- **Cord-connected filter** — A filter provided with a supply cord having an attachment plug for connecting the filter to a branch circuit receptacle. It is also provided with a receptacle for distribution of the filtered voltage to an external (appliance or other equipment) load.
- **Direct-plug-in filter** — A filter provided with blades at the filter body that plug directly into a 15 A, 120 V branch circuit receptacle. It is also provided with a receptacle for the distribution of the filtered voltage to an external (appliance or other equipment) load.
- **Facility filter** — A filter installed as part of the service, feeders, or branch circuitry of a building wiring system.

**PRODUCT IDENTIFICATION**

- One of the following product identities appears on the product:
  - Cord-connected EMI Filter
  - Direct-plug-in EMI Filter
  - Facility EMI Filter

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1283, "Electromagnetic Interference Filters."

**UL MARK**

- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Cord-connected EMI Filter,” “Direct Plug-in EMI Filter” or “Facility EMI Filter.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Electromagnets for Use in Hazardous Locations (FOOM)**

**USE AND INSTALLATION**

This category covers electromagnets, including electromagnetic separators, used to generate magnetic fields.

Special care should be taken to ensure suspended electromagnets are installed in accordance with the manufacturer’s instructions, and that they are supported from overhead by cables with adequate strength.

Some types of electromagnetic separators use moving belts to move items out of the magnetic field. Special care should be taken to ensure that these products are installed in accordance with the manufacturer’s instructions and that guarding is provided on moving parts in accordance with local codes.

**PRODUCT IDENTIFICATION**

- The following product identity appears on the product:
  - Electromagnet for Use in Hazardous Locations

**RELATED PRODUCTS**

Electromagnetic interference filters used to attenuate unwanted radio frequency signals are covered under Electromagnetic Interference Filters (FOKY).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and Hazardous Locations (AALZ).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

**UL MARK**

- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
ELEVATOR EQUIPMENT (FQKR)

This category covers elevator controls and accessories, elevator control panels, elevator relays, elevator switches, elevator door-locking devices and contacts, passenger elevator car enclosures, and elevator oil buffers.

DUMBWAITERS (FQMA)

**USE AND INSTALLATION**

This category covers manually and power-operated dumbwaiters intended to lift and lower materials only.

This category only covers dumbwaiters as defined in ANSI/ASME A17.1/CSA B44, "Safety Code for Elevators and Escalators," as follows: "A hoisting and lowering mechanism equipped with a car of limited size that moves in a hoistway and serves two or more landings that is used exclusively for carrying materials."

This category covers the dumbwaiter controller, car and car door. It also covers driving machines that are attached to the car. It does not cover the dumbwaiter hoistway, hoistway enclosure, suspension means, counterweights, buffers or other equipment not attached to the car. The installation of the dumbwaiter in a hoistway, including the interaction of the car with hoistway doors, interlocks, terminal-stopping devices, and the like, has not been investigated.

Where safeties are attached to the car, the construction of these safeties is investigated to the construction requirements for safeties in ANSI/ASME A17.1/CSA B44. The proper operation of these safeties is dependent upon the complete installation. The suitability of the safeties, including performance, is dependent upon approval by the Authority Having Jurisdiction (AHJ).

The suitability of the complete installation, including proper operation and sequencing, is dependent upon approval by the AHJ.

Dumbwaiters are intended for installation in accordance with ANSI/ASME A17.1/CSA B44 and Article 620 of ANSI/NFPA 70, "National Electrical Code."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electrically Operated Dumbwaiter
- Manually Operated Dumbwaiter
- Power-operated Dumbwaiter

**RELATED PRODUCTS**

Elevator controls and accessories are covered under Elevator Controls and Accessories (FQMW).

Elevator control panels are covered under Elevator Control Panels (FQPB).

Elevator door locks are covered under Elevator-door-locking Devices and Contacts (FQXZ).

Elevator switches are covered under Elevator Switches (FRAH).

Material lift that are not permanently installed are covered under Material Lifts (PGZH).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Seismic switches are additionally investigated to Clause 8.4.10.1.2 of ANSI/ASME A17.1/CSA B44 (2010), "Safety Code for Elevators and Escalators."

Where indicated in the individual certifications, elevator controls and accessories have also been investigated to ANSI/ASME A17.1, "Safety Code for Elevators and Escalators," and ANSI/ASME A17.5, "Elevator and Escalator Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**ADDITIONAL CERTIFICATION MARKINGS**

Products additionally investigated to ANSI/ASME A17.1 and ANSI/ASME A17.5 may also be marked:

- ALSO CERTIFIED TO ANSI/ASME A17.1-[issue date] AND ANSI/ASME A17.5-[issue date]

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol as illustrated in the Introduction of this Directory together with the word "LISTED," a control number, and the product name "Electrically-operated Dumbwaiter," "Power-operated Dumbwaiter" or "Manually-operated Dumbwaiter."

**Dumbwaiters (FQMA)—Continued**

- Electrically-operated Dumbwaiter
- Manually-operated Dumbwaiter

- Power-operated Dumbwaiter

**ELEVATOR CONTROLS AND ACCESSORIES (FQMW)**

**GENERAL**

This category covers elevator accessories such as push buttons, indicator lights and lighting fixtures, and elevator controls such as power supplies (motor and door operators) intended for use in elevator applications.

Some devices are open type (without enclosures), which means that such devices are for use as parts of certified equipment where the acceptability of the combination has been determined by UL or where open-type devices are acceptable.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Elevator Accessory
- Elevator Control

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Seismic switches are additionally investigated to Clause 8.4.10.1.2 of ANSI/ASME A17.1/CSA B44 (2010), "Safety Code for Elevators and Escalators."

Where indicated in the individual certifications, elevator controls and accessories have also been investigated to ANSI/ASME A17.1, "Safety Code for Elevators and Escalators," and ANSI/ASME A17.5, "Elevator and Escalator Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**ADDITIONAL CERTIFICATION MARKINGS**

Products additionally investigated to ANSI/ASME A17.1 and ANSI/ASME A17.5 may also be marked:

- ALSO CERTIFIED TO ANSI/ASME A17.1-[issue date] AND ANSI/ASME A17.5-[issue date]

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol as illustrated in the Introduction of this Directory together with the word "LISTED," a control number, and the product name "Electrically-operated Dumbwaiter," "Power-operated Dumbwaiter" or "Manually-operated Dumbwaiter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELEVATOR CONTROL PANELS (FQPB)**

**USE**

This category covers elevator control panels consisting of assemblies of equipment intended to control elevator, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment.

**PRODUCT IDENTITY**

- Dumbwaiter
- Escalator
- Elevator

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).
ELEVATOR EQUIPMENT (FQKR)

Elevator Control Panels (FQPB)−Continued

One of the following product identities appears on the product:
Enclosed Elevator Control Panel
Open Elevator Control Panel

ADDITIONAL INFORMATION
For additional information, see Elevator Equipment (FQKR), Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 508A, “Industrial Control Panels.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
For equipment that has been investigated with respect to electrical shock and fire hazards only:
AS TO ELECTRICAL SHOCK AND FIRE HAZARDS ONLY. CERTIFICATION DOES NOT INCLUDE EVALUATION WITH RESPECT TO ANSI/ASME A17.1 OR A17.5.

Alternate UL Mark
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:
- ELEVATOR CONTROL PANEL
+ No.

OPEN or ENCLOSED
+ One of the following statements, as applicable:
Statement No. 1: AS TO ELECTRICAL SHOCK AND FIRE HAZARD ONLY. CLASSIFICATION DOES NOT INCLUDE EVALUATION WITH RESPECT TO ANSI/ASME A17.1 OR A17.5
Statement No. 2: AS TO ELECTRICAL SHOCK AND FIRE HAZARD, AND IN ACCORDANCE WITH ANSI/ASME A17.1 [date] AND A17.5 [date]

Equipment that has been investigated with respect to electrical shock and fire hazard only is marked with Statement No. 1.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR DOOR-LOCKING DEVICES AND CONTACTS (FQXZ)

This category covers devices designed for installation under elevator cars having a rated speed in excess of 50 ft/min in order to stop a descending car beyond its normal limit of travel. They have been certified to ANSI/ASME A17.1, “Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks.”

PRODUCT IDENTITY
One of the following product identities appears on the product:
Elevator Combination Mechanical Lock and Electric Contact
Elevator Electric Contact
Elevator Interlock
Elevator Interlock – Retiring Cam Required

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Elevator Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 104, “Elevator Door Locking Devices and Contacts.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Elevator Interlock,” “Elevator Interlock Retiring Cam Required,” “Elevator Combination Mechanical Lock and Electric Contact,” “Elevator Electric Contact,” or other appropriate product name as shown in the individual Listings.

ELEVATOR OIL BUFFERS (FQZD)

GENERAL
This category covers devices intended for installation under elevator cars having a rated speed in excess of 50 ft/min in order to stop a descending car beyond its normal limit of travel. They have been certified to paragraph 201.4g of ANSI/ASME A17.1, “Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks.”

PRODUCT IDENTITY
The following product identity appears on the product:
Elevator Oil Buffer

ADDITIONAL INFORMATION
For additional information, see Elevator Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 104, “Elevator Door Locking Devices and Contacts.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:
ANSI/ASME A17.1-[issue date], PARAGRAPH 201.4g
SAFETY CODE FOR ELEVATORS, DUMBWAITERS, ESCALATORS AND MOVING WALKS
**ELEVATOR SWITCHES (FRAH)**

**USE AND INSTALLATION**

This category covers switches intended for use with elevator system cars or shafts. The switches are designed for installation and operation in accordance with ANSI/ASME A17.1, “Safety Code for Elevators and Escalators.”

These switches have been investigated for proper operation when installed as recommended by the manufacturer. Their acceptability is determined at the point of installation by the Authority Having Jurisdiction.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Elevator Limit Switch
- Elevator Slack Cable Switch
- Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Elevator-door-locking devices and contacts are covered under Elevator-door-locking Devices and Contacts (FOXZ).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 104, “Elevator Door Locking Devices and Contacts.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**PASSENGER ELEVATOR CAR ENCLOSURES (FRBK)**

**GENERAL**

This category covers passenger elevator car enclosures, which are factory-built assemblies of wall and ceiling panels intended to be secured to a car platform.

These factory-built enclosures incorporate materials and equipment such as decorative panels, suspended ceilings and luminaires which, after installation, may not be accessible for inspection at the installation site.

These factory-built enclosures may be shipped disassembled.

This category does not cover freight car enclosures, enclosures having glass panels in excess of 1 sq ft in area, enclosures having gates, weights, vertically sliding car doors, or padded linings for temporary use in passenger cars during the handling of freight.
### Elevator Control Panels for Use in Hazardous Locations (FSNA)—Continued

**General**

This category covers devices designed for use in elevators and intended for installation and operation in accordance with the requirements of ANSI/ASME A17.1, "Safety Code for Elevators and Escalators." Elevator hoistway door interlocks are intended to prevent the operation of the driving machine by the normal operating device unless the hoistway door is in the closed position, and to lock the hoistway door in the closed position and prevent it from being opened from the landing side unless the car is within the landing zone. These locks and contacts bear the product name (C) under PRODUCT IDENTITY.

Elevator hoistway door, car door or gate electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the door or gate is in the closed position. These contacts bear the product name (D) under PRODUCT IDENTITY.

### Elevator Door-locking Devices and Contacts for Use in Hazardous Locations (FSNT)—Continued

**Functional Safety Certificates Only (FSCO)**

This category covers energy and industrial systems, such as photovoltaic systems, wind turbines, power conversion equipment, utility interactive devices, motor controllers, battery management systems, battery chargers, proximity switches, elevator control panels, etc., that have been certified for functional safety.

Functional safety relates to all functions, such as control, protection and monitoring, that are intended to reduce the risk of fire, electric shock or injury to persons.

Functional-safety investigations cover a product’s programmable electronics (i.e., hardware and embedded software), but also products with hardware-implemented functions only.

Software may be the embedded instructions that reside in a programmable component and that perform some of the functions of the product under investigation. Software may be application-specific, i.e., the software is limited to a specific, dedicated, designated use. The software to be investigated may include operating systems, support tools, firmware and application systems.

In addition to electronic hardware and software, functional-safety investigations may include other technologies such as mechanical, hydraulic, pneumatic, and combinations thereof.

Functional-safety investigations may also be conducted for systems and/or subsystems of multiple products. These investigations often include the following elements:

- Review of the engineering documentation produced during the development, operation and maintenance of the product or system of interest
- Risk analysis, including Hazard-based Safety Engineering (HBSE) Analysis
### ABBREVIATIONS AND TERMS

**Abbreviation/Term** | **Definition**
--- | ---
**SIL** | Safety integrity level — One of four levels (A through D) to specify an item’s or element’s necessary requirements of ISO/Draft International Standard 26262-1 through 26262-10, and safety measures for avoiding an unreasonable residual risk, with “D” representing the most stringent level and “A” the least stringent level.

**Beta Factor** | The measure for susceptibility of Common Cause Failure (see CCF below).

**Category** | Classification of the safety-related parts of a control system with respect to their resistance to faults and their subsequent behavior in the fault condition, and which is achieved by the structural arrangement of the parts and/or their reliability. There are five categories (b, 1, 2, 3, 4) with “b” representing the lowest level of resistance and “4” representing the highest level of resistance.

**CCF** | Common-cause failure — Failure as the result of one or more events, causing concurrent failures of two or more separate channels in a multiple-channel system, leading to system failure.

**Class** | ANSI/UL 1998 defines software classes:
- **Software Class 1**: Sections of software intended to control functions to reduce the likelihood of a risk associated with the equipment. Examples of sections that may be considered Software Class 1 functions are thermal cutouts and door locks for laundry equipment.
- **Software Class 2**: Sections of software intended to control functions to reduce the likelihood of special risks (e.g., explosion) associated with the equipment. Examples of sections that may be considered Software Class 2 functions are automatic burner controls and thermal cutouts for closed water-heater systems (unvented).

**Diagnostic Coverage** | The measure of the effectiveness of diagnostics, which may be determined as the ratio of the failure rate of detected dangerous failures and the failure rate of total dangerous failures. Instead of a precise percentage value, EN ISO/ISO 13849-1 defines four percentage ranges for diagnostic coverage: None, Low, Medium and High.

**HFT** | Hardware fault tolerance — The ability of a system to continue nonstop when a hardware failure occurs.
- 0 = susceptible at a single fault
- 1 = susceptible at two faults
- 2 = susceptible at three faults

**MTTFd** | Mean time to failure (dangerous) — A measure of reliability of a piece of equipment, given the average time before the first failure.

**PFD\textsubscript{avg}** | Average probability of a dangerous failure on demand of the safety function — Safety unavailability of an electrical/electronic/programmable electronic (E/E/PE) safety-related system that performs the specified safety function when a demand occurs from the equipment under control (EUC) or EUC control system.

**PFH\textsubscript{avg}** | Average frequency of a dangerous failure of the safety function per hour — The average frequency of a dangerous failure of an E/E/PE safety-related system to perform the specified safety function over a given period of time.

**PL** | Performance level — A discrete level used to specify the ability of safety-related parts of a control system to perform a safety function under foreseeable conditions. There are five levels (a through e), with “a” representing the lowest ability level and “e” the highest ability level.

**SFF** | SFF Safe failure fraction — The property of a safety-related element defined by the ratio of the average failure rates of safe plus dangerous detected failures and safe plus dangerous failures.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ), Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ), Marine Products (AAMP) and Mechanical Equipment and Associated Products (AAME).

### REQUIREMENTS

The following standards are used to investigate products in this category for functional safety, as noted in the individual Listings:
- ANSI/UL 1998 (1998), “Software in Programmable Components” (used in conjunction with UL 991 for products that include software)
- CSA-C22.2 No. 0.8 (2009), “Safety Functions Incorporating Electronic Technology”
FUNCTIONAL SAFETY CERTIFICATES ONLY (FSCO)

UL CERTIFICATE

UL’s Functional Safety Certificate Program covers products investigated for functional safety only, without UL Listing or Recognition. The Functional Safety Certificate means that UL has investigated a sample of the product and determined that it complies with the safety requirements of a published functional-safety standard. The Certificate is valid for a period of three years from the date of issue.

At a minimum, the Certificate contains the following information:
- Certificate number
- Issue date of certificate
- Type of certified product
- Model
- SIL/PL/Class
- Conditions of use, if applicable
- Tested according to
- Test Report number
- Certificate expiration date

UL’s Functional Safety Certificate Program covers products investigated for functional safety only, without UL Listing or Recognition. The Functional Safety Certificate means that UL has investigated a sample of the product and determined that it complies with the safety requirements of a published functional-safety standard. The Certificate is valid for a period of three years from the date of issue.

ENERGY AND INDUSTRIAL SYSTEMS CERTIFIED FOR FUNCTIONAL SAFETY (FSPC)

General
This category covers energy and industrial systems, such as photovoltaic systems, wind turbines, power conversion equipment, utility interactive devices, motor controllers, battery management systems, battery chargers, proximity switches, elevator control panels, etc., that have been certified for functional safety.

Proximity switches, elevator control panels, etc., that have been certified of three years from the date of issue.

Published functional-safety standard. The Certificate is valid for a period.

Functional Safety – Part 1: General Principles for Design

Functional Safety – Part 2: Management of Functional Safety

Functional Safety – Part 3: Concept Phase

Functional Safety – Part 4: Product Development: System Level

Functional Safety – Part 5: Product Development: Hardware Level

Functional Safety – Part 6: Product Development: Software Level

Functional Safety – Part 7: Production and Operation

Functional Safety – Part 8: Supporting Processes

Functional Safety – Part 9: ASIL-Oriented and Safety-Oriented Analyses

Functional Safety – Part 10: Guideline

The category covers energy and industrial systems, such as photovoltaic systems, wind turbines, power conversion equipment, utility interactive devices, motor controllers, battery management systems, battery chargers, proximity switches, elevator control panels, etc., that have been certified for functional safety.

ENERGY AND INDUSTRIAL SYSTEMS CERTIFIED FOR FUNCTIONAL SAFETY (FSPC)

General
This category covers energy and industrial systems, such as photovoltaic systems, wind turbines, power conversion equipment, utility interactive devices, motor controllers, battery management systems, battery chargers, proximity switches, elevator control panels, etc., that have been certified for functional safety.

Functional safety relates to all functions, such as control, protection and monitoring, that are intended to reduce the risk of fire, electric shock or injury to persons.

Functional-safety investigations cover a product’s programmable electronics (i.e., hardware and embedded software), but also products with hardware-implemented functions only.

Software may be the embedded instructions that reside in a programmable component and that perform some of the functions of the product under investigation. Software may be application-specific, i.e., the software is limited to a specific, dedicated, designated use. The software to be investigated may include operating systems, support tools, firmware and application systems.

In addition to electronic hardware and software, functional-safety investigations may include other technologies such as mechanical, hydraulic, pneumatic, and combinations thereof.

Functional-safety investigations may also be conducted for systems and/or subsystems of multiple products. These investigations often include the following elements:
- Review of the engineering documentation produced during the development, operation and maintenance of the product or system
- Risk analysis, including Hazard-based Safety Engineering (HBSE) Analysis
- Safety life-cycle management

The functional-safety investigation may result in attributing functional-safety ratings such as a safety integrity level (SIL) or performance level (PL) to the different safety-related functions. It is the responsibility of the customer to determine and specify these safety functions, the functional-safety standards to which the products are intended to be certified, and the desired functional-safety ratings.

The product manual and individual certification should be consulted for detailed information and instructions about a particular product.

ABBREVIATIONS AND TERMS

The following abbreviations and terms are used in the individual certifications:

Abbreviation/Term | Definition
---|---
ASIL | Automotive safety integrity level — One of four levels (A through D) to specify an item’s or element’s necessary requirements of ISO/Draft International Standard 26262-1 through 26262-10, and safety measures for avoiding an unreasonable residual risk, with “D” representing the most stringent level and “A” the least stringent level.

Beta Factor | The measure for susceptibility of Common Cause Failure (see CCF below).

Category | Classification of the safety-related parts of a control system with respect to their resistance to faults and their subsequent behavior in the fault condition, and which is achieved by the structural arrangement of the parts and/or their reliability. There are five categories (a, b, c, d, e) with “a” representing the lowest level of resistance and “e” representing the highest level of resistance.

CCF | Common cause failure — Failure as the result of one or more events, causing concurrent failures of two or more separate channels in a multiple-channel system, leading to system failure.

Class | ANSI/UL 1998 defines software classes:

Software Class 1: Sections of software intended to control function to reduce the likelihood of a risk associated with the equipment. Examples of sections that may be considered Software Class 1 functions are thermal cutouts and door locks for laundry equipment.

Software Class 2: Sections of software intended to control functions to reduce the likelihood of special risks (e.g., explosion) associated with the equipment. Examples of sections of that may be considered Software Class 2 functions are automatic burner controls and thermal cutouts for closed water-heater systems (unvented).

Diagnostic Coverage | The measure of the effectiveness of diagnostics, which may be determined as the ratio between the failure rate of detected dangerous failures and the failure rate of total dangerous failures. Instead of a precise percentage value, EN ISO/ISO 13849-1 defines four percentage ranges for diagnostic coverage: None, Low, Medium, and High.

HFT | Hardware fault tolerance — The ability of a system to continue nonstop when a hardware failure occurs.

0 = susceptible at a single fault
1 = susceptible at two faults
2 = susceptible at three faults

LOOK FOR THE UL MARK ON PRODUCT
Division 1 and 2 Hazardous Locations (AAIZ), Marine Products (AAMP), Locations (AALZ), Equipment for Use in and Relating to Class I, II and III,

SIL Safety integrity level — A discrete level (one out of a possible four) corresponding to a range of safety integrity values, where safety integrity level 4 has the highest level of safety integrity and safety integrity level 1 has the lowest. Certification of a safety function to a certain SIL capability will, in addition to systematic safety integrity and architectural constraints, also include the PFDavg of the safety function.

SIL Claim Limit — Defined by EN/IEC 62061: The maximum SIL that can be claimed for a safety-related subsystem in relation to architectural constraints and systematic safety integrity. There are three levels, where SIL capability 3 has the highest level of safety integrity and SIL capability 1 has the lowest. Certification of a safety function to a certain SIL claim limit will, in addition to systematic safety integrity and architectural constraints, also include the PFDavg of the safety function.

Type

Defined by ANSI/UL 61496-1: "A measure of the ability of safety-related parts of a control system to perform a safety function under foreseeable conditions. There are five levels (a through e), with "a" representing the lowest ability level and "e" the highest ability level.

SFF Safe failure fraction — The property of a safety-related element defined by the ratio of the average failure rates of safe plus dangerous detected failures and safe plus dangerous failures.

SIL Safety integrity level — A discrete level (one out of a possible four) corresponding to a range of safety integrity values, where safety integrity level 4 has the highest level of safety integrity and safety integrity level 1 has the lowest. Certification of a safety function to a certain SIL capability will, in addition to systematic safety integrity and architectural constraints, also include the PFDavg of the safety function.

SIL Capability

Defined by EN/IEC 61508-2: The maximum SIL that can be claimed for a safety-related subsystem in relation to architectural constraints and systematic safety integrity. There are three levels, where SIL claim limit 3 has the highest level of safety integrity and SIL claim limit 1 has the lowest. Certification of a safety function to a certain SIL claim limit will, in addition to systematic safety integrity and architectural constraints, also include the PFDavg of the safety function.

Certification of a safety function to a certain SIL claim limit will, in addition to systematic safety integrity and architectural constraints, also include the PFDavg of the safety function.
ELEVATOR CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS (FSSA)

GENERAL
This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts, and their associated equipment.

Elevator control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe or low energy circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of elevator control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

PRODUCT IDENTITY
The following product identity appears on the product:
Elevator Control Panel Relating to Hazardous Locations with Intrinsically Safe Circuit Extensions

RELATED PRODUCTS
Elevator control panels for use in hazardous (classified) locations are covered under Elevator Control Panels for Use in Hazardous Locations (FSNA).

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAILZ).

REQUIREMENTS
The basic unclassified locations standard used to investigate products in this category is UL 508A, “Industrial Control Panels.”

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, “Industrial Control Panels Relating to Hazardous (Classified) Locations.”

Where indicated in the individual Classifications, elevator control panels have also been investigated to ANSI/ASME A17.1, “Safety Code for Elevators and Escalators,” and ANSI/ASME A17.5, “Elevator and Escalator Electrical Equipment.”
EMERGENCY CALL SYSTEMS FOR ASSISTED LIVING AND INDEPENDENT LIVING FACILITIES (FSZO)

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALLING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Emergency Call System Equipment” or “Emergency Call System Subassembly.”

Some of these products are also Listed under Hospital Signaling and Nurse Call Equipment (NBRZ). When applicable, the product name may include “Hospital Signaling and Nurse Call and Emergency Call System Equipment” or “Hospital Signaling and Nurse Call and Emergency Call System Subassembly.”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Emergency Call System and Security Equipment” or “Emergency Call System and Security Subassembly.”

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “Fire Alarm,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “Emergency Call System and Telephone Equipment”).

The product name may be abbreviated as follows: The word “Type” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**
- **S** – Security Equipment
- **F** – Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**EMERGENCY LIGHTING AND POWER EQUIPMENT (FTBR)**

**USE**

Emergency power equipment is intended to supply sufficient electrical energy for emergency luminaire operation, or to distribute and manage the electrical energy for emergency luminaires from a remote emergency supply source. Emergency power equipment with batteries has a test switch and visible or audible indicators to report the readiness of the emergency supply.

Emergency lighting equipment is intended to illuminate the means of egress, or means of egress signage, under both normal and emergency conditions.

Equipment may contain both emergency power and lighting capability, or may provide only one of the two functions.

**PRODUCT TYPES**

This category covers emergency luminaires, exit signs, unit equipment, inverters, central station battery systems, load control relays, and related accessories that directly facilitate or supplement the function of these devices.

This category also includes inverter/charger packs intended for factory or field installation in UL-certified luminaires. These inverter/charger packs have been investigated by UL to determine that when installed in accordance with the manufacturer’s instructions they do not adversely affect the operation of the installed luminaire. Electrical ratings, lamp compatibility, and wiring diagrams are marked on the packs and/or identified in the instructions provided. Inverter/charger packs are not suitable for installation in sealed or gasketed compartments unless investigated and marked for such applications.

**LOOK FOR THE UL MARK ON PRODUCT**
EMERGENCY LIGHTING AND POWER EQUIPMENT (FTBR)

All products have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of 20–30°C (68–86°F) unless otherwise marked with an extended-use temperature range.

Emergency power equipment with batteries provides 90 minutes (or more, if so marked) of rated operating power for emergency lighting equipment (integral or remote) sufficient to meet the illumination performance requirements of ANSI/NFPA 101 and the IBC, when installed as part of a facility’s emergency lighting system.

Exit signs have been investigated for visibility from 100 ft unless marked with a maximum viewing distance of 50 or 75 ft. Exit signs investigated for installation near floor level have been subjected to an impact test and are marked “Suitable for Floor Proximity Installation.”

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Emer. Light Eq.
- Emer. Light & Power Eq.
- Emer. Power Eq.
- Emergency Lighting and Power Equipment
- Emergency Lighting Equipment
- Emergency Power Equipment

RELATED PRODUCTS

Exit signs intended for connection to a single source of power only are covered under Exit Fixtures (FWBR). Exit signs with no connection to a source of electrical power are covered under Exit Signs, Self-luminous and Photoluminescent (FWB). Equipment intended to provide light or power when normal (utility) power is not available, but that has not been investigated for compliance with the applicable power or illumination performance requirements of ANSI/NFPA 101 or the IBC, is covered under Lighting and Power Equipment, Auxiliary (OUST). Kits intended to convert exit signs from one type of internal light source to another are covered under Exit Sign Conversion Kits (FWCP) or Exit Sign Retrofit Kits (GGET). Emergency lighting and power equipment intended for use on marine vessels is covered under Luminaires, Emergency Lighting, Marine (IGTC). Equipment intended to transfer utilization equipment from the normal (utility) supply to an emergency supply, and back again, is covered under Automatic Transfer Switches for use in Emergency Systems (WPWR).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark is for these products the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the word “LISTED,” a control number, and the product name “Emergency Lighting Equipment” (or “Emer. Light Eq.”), “Emergency Power Equipment” (or “Emer. Power Eq.”), or “Emergency Lighting and Power Equipment” (or “Emer. Light & Power Eq.”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Emergency Light-emitting-diode Drivers (FTBV)

For additional information, see Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Emergency Lighting and Power Equipment (FTBR), Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol and the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

EMERGENCY LED DRIVER

FOR USE WITH LED LUMINAIRE IDENTIFIED IN THE MANUFACTURER’S INSTALLATION INSTRUCTIONS

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH [manufacturer/model number] LED LUMINAIRE

ENERGY STORAGE SYSTEMS AND EQUIPMENT (FTBW)

This category covers light-emitting-diode (LED) drivers with rechargeable battery packs, intended for field or factory installation in or with specifically identified luminaires. When installed in or with the identified luminaires in accordance with the manufacturer’s instructions, the luminaire complies with the lumen output requirements of ANSI/UL 924, “Emergency Lighting and Power Equipment,” and is eligible to serve as part of a facility’s emergency lighting system in accordance with ANSI/
These systems use various energy storage technologies including electrochemical, chemical mechanical and thermal, and incorporate equipment including but not limited to fuel cells with hydrogen production and storage equipment; synchronous generators; induction generators; battery systems; inverters; converters; fly wheels; charge controllers; utility interconnection systems equipment; enclosures with or without environmental control systems, lighting and controls; and protection relays.

Energy storage systems may be stand-alone, utility interactive, or multimode. Stand-alone systems are intended to operate independent of the utility grid. Utility interactive systems operate in parallel with the utility grid. Multimode systems can operate as both or either stand-alone (utility independent) or utility interactive modes. For additional information on grid connectivity considerations, see Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Energy storage systems are factory- or field-wired assemblies in which the combination has been investigated for operation as a system assembly when installed in accordance with the manufacturer's installation instructions. These systems are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," when installed in non-utility areas and in accordance with ANSI/IEEE C2, "National Electrical Safety Code," when installed under the exclusive control of an electric utility on utility property.

PRODUCT IDENTITIES
One of the following product identities appears on the product:
- Energy Storage System
- Energy Storage System Enclosure Assembly

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic requirements used to investigate products in this category are contained in UL 9540, "Outline of Investigation for Energy Storage Systems and Equipment."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

* * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENGINE GENERATORS (FTCA)

GENERAL
Engine generators intended for use in recreational vehicles are covered by Engine Generators for Recreational Vehicles (FTCZ).

RELATED PRODUCTS
Engine generators intended for recreational vehicles are covered by Engine Generators for Recreational Vehicles (FTCZ).

Engine generators intended for stationary use are covered under Engine Generators (FTSR).

Wind-driven generators are covered under Wind Turbine Generating System Subassemblies (ZGZJ).

Motor-generator sets and flywheel energy-storage systems are covered under Motor-Generator Sets (PQYW).

Generators, also referred to as generator heads or alternators, intended for use in an engine generator are covered under Generators (JZGZ).

ADDITIONAL INFORMATION
For additional information, see Engine Generators (FTCA), Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 2201, "Portable Engine-Generator Assemblies,"

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Emergency Lighting Equipment, Fittings, for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY LIGHTING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FTHR)

GENERAL

This category covers automatic transfer switches designed for control of emergency lighting and power circuits as required by Articles 500, 505 and 700 of ANSI/NFPA 70, “National Electrical Code.” The lighting circuit ratings do not exceed 250 V for tungsten lamps. The investigation of automatic transfer switches includes the determination of their suitability for transferring the load from a normal supply circuit to an immediately available emergency supply circuit.

This category also covers unit equipment, but not separate lamp heads or lighting fixtures (luminaires).

PRODUCT IDENTITY

The following product identity appears on the product:

Emergency Lighting Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations.”

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Emergency Lighting Equipment, Fittings, for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY LIGHTING EQUIPMENT FITTINGS FOR USE IN HAZARDOUS LOCATIONS (FTHF)

GENERAL

This category covers subassemblies of emergency lighting equipment fittings intended for final assembly into a unit in the field in accordance with the manufacturer’s installation instructions.

Information restricting the use of these fittings is marked on the fitting or provided with the fitting.

The lighting circuit ratings do not exceed 250 V for tungsten lamps.

PRODUCT IDENTITY

The following product identity appears on the product:

Emergency Lighting Equipment Fitting for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAI).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations,” in addition to Articles 500 – 503 and 700 of ANSI/NFPA 70, “National Electrical Code.”
ENCLOSURES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FTQH)

GENERAL
This category covers electrical enclosures employing the flameproof “d” protection technique in accordance with ANSI/NFPA 70, “National Electrical Code.” These enclosures are intended for use in one or more of the following hazardous locations, as indicated on the individual product: Class I, Zone 0, 1 and 2.

Unless otherwise noted in the individual certifications, enclosures are investigated for enclosing electrical equipment intended for connection to circuits having a maximum available fault current of 10,000 rms symmetrical amperes.

This category covers only the enclosures. Devices that may be contained within these enclosures are not covered under this category.

PRODUCT IDENTITY
The following product identity appears on the product:
Enclosure for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS AS TO EXPLOSION AND FIRE HAZARD ONLY

Alternate UL Mark

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:
AS TO EXPLOSION AND FIRE HAZARDS ONLY

ENCLOSURES FOR METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FTRQ)

GENERAL
This category covers enclosures intended to house low-temperature metering equipment with no normally arcing or sparking parts in the hazardous location classes and groups indicated on the product, and as defined in ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY
The following product identity appears on the product:
Enclosure for Metering Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

ENCLOSURES FOR METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FTRQ)

GENERAL
This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, “National Electrical Code”: Class I, Groups A, B, C and D; Class II, Groups E, F and G; and Class II, Groups F and G, Division 2 only.

This category covers only the enclosures. Electrical devices that may be mounted within these enclosures are not covered under this category. Limitations on the maximum interrupting rating of arcing contacts and temperatures are provided on a label secured to the inside of the enclosure.

Unless otherwise noted in the individual certifications, enclosures are investigated for enclosing electrical equipment intended for connection to circuits having a maximum available fault current of 10,000 rms symmetrical amperes.

PRODUCT IDENTITY
The following product identity appears on the product:
Enclosure for Use in Hazardous Locations

RELATED PRODUCTS
Certain enclosures in this category have also been investigated for use aboard marine vessels in accordance with United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, “General Provisions,” 46CFR111, “Electrical Systems – General Requirements,” 46CFR112, “Emergency Lighting and Power Systems,” and 46CFR113, “Communication and Alarm Systems and Equipment.” Such enclosures are identified by a Marine Certification Mark. Enclosures marked “For Use On Vessels Over 65 Feet” have not been subjected to shock and vibration tests. Enclosures that have been subjected to shock and vibration tests are not marked with a vessel length limitation and may be used on any size vessel.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS
The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL Subject 2062, “Outline of Investigation for Enclosures for Use in Hazardous (Classified) Locations,” is also used to investigate explosion-proof, dust-ignition-proof and dust-tight enclosures.

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:
AS TO EXPLOSION AND FIRE HAZARD ONLY

Look for the UL Mark on Product
ENCLOSURE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (FTRX)

GENERAL
This category covers enclosure bodies, flat, domed or window covers, window assemblies, threaded extensions, actuation mechanisms and similar subassemblies of enclosures. They are intended to be assembled at the factory or in the field to form a complete explosion-proof or dust-ignition-proof enclosure. Restrictions on the use and assembly of these devices are marked on each part.

PRODUCT IDENTITY
The following product identity appears on the product:
Enclosure Accessory for Use in Hazardous Locations

RELATED PRODUCTS
For additional information, see Enclosures for Use in Hazardous Locations (FTRV).

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS
The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 1203, “Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

ENCLOSURE ACCESSORY FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENERGY USAGE MONITORING SYSTEMS (FTRZ)

USE
This category covers products intended for use in metering of utility and nonutility electric power. The primary function of these devices is to monitor power consumption on a building main supply or separate branch circuits. These devices may communicate with other devices by means of power line carrier, satellite/radio frequency, telephone, cable or other means. Devices suitable for outdoor use are so marked.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Energy-usage Monitor
Sub-metering Equipment
Watt-hour Meter

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is UL 916, “Energy Management Equipment.”

Some products covered under this category have also been investigated to one of the following:
1. ANSI/NEMA C12.1, “Code for Electricity Metering”
2. ANSI/NEMA C12.10, “Physical Aspects of Watthour Meters”
3. ANSI/NEMA C12.11, “Instrument Transformers for Revenue Metering, 10 kV BIL through 350 kV BIL (0.6 kV NSV through 69 kV NSV)”
4. ANSI/NEMA C12.20, “Electricity Meters – 0.2 and 0.5 Accuracy Classes”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
For those products which are also certified by UL to ANSI/NEMA C12.10, ANSI/NEMA C12.1, ANSI/NEMA C12.20, ANSI/NEMA C12.11 or ANSI/NEMA C12.9, one of the following statements is included on the product:

ALSO CERTIFIED TO ANSI/NEMA C12.i-916 [issue date of standard or latest addendum], Code for Electricity Metering
ALSO CERTIFIED TO ANSI/NEMA C12.10-916 [issue date of standard or latest addendum], Physical Aspects of Watthour Meters
ALSO CERTIFIED TO ANSI/NEMA C12.11-916 [issue date of standard or latest addendum], Instrument Transformers for Revenue Metering, 10 kV BIL through 350 kV BIL (0.6 kV NSV through 69 kV NSV)
ALSO CERTIFIED TO ANSI/NEMA C12.20-916 [issue date of standard or latest addendum], Electricity Meters – 0.2 and 0.5 Accuracy Classes
ENGINE GENERATORS (FTSR)

GENERAL

This category covers stationary electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines.

This category does not cover engine generator assemblies mounted on trailers intended for temporary installation.

This category does not cover engine generator assemblies intended for marine use.

Certified stationary engine generator assemblies may be used in emergency and standby power systems, provided the installed system complies with applicable codes.

PRODUCT IDENTITY

The following product identity appears on the product:

Stationary Engine Generator Assembly

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AAI).  

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2200, "Stationary Engine Generator Assemblies."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Stationary Engine Generator Assembly," or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLS FOR STATIONARY ENGINE-DRIVEN ASSEMBLIES (FTPM)

GENERAL

This category covers engine and engine generator control panels and assemblies that operate, control and supervise an engine or engine generator’s operational functions.

Unless otherwise indicated in the individual certifications, engine controllers are intended for use with spark-ignition (gasoline or natural gas) or diesel engines.

The electrical equipment covered under this category is intended for use in systems installed in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), including Article 702, and ANSI/NFPA 37, Article 37.1, Installation and Use of Stationary Combustion Engines and Gas Turbines, including Chapter 4.

These units perform primary functions, such as engine control including but not limited to: engine starting, overspeed limiting, fuel-flow control, ignition control, throttle control, engine-temperature control, low-oil cutoff, etc., generator control or stator or rotor control, and/or engine and/or generator monitoring.

These controllers may additionally perform other secondary functions, such as battery charging, generator voltage regulation, power-factor adjustment, transfer switch control, overcurrent (overload) protection, stand-alone utility interactive protective relay functions (such as over, under, voltage and frequency, phase loss, phase reversal, and loss of synchronization), ground-fault protection, generator rotor and stator field control, thermal protection.

These devices are intended for use in control circuits rated 600 V maximum or measurement circuits rated 1500 V maximum.

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically noted in the individual certifications. The accuracy of measured quantities has been investigated only when the product has been investigated for protective functions.

A controller that is marked as suitable for use in emergency standby systems in accordance with Article 700 of the NEC is also suitable for use in legally required standby systems in accordance with Article 701 of the NEC, optional standby systems in accordance with Article 702 of the NEC, or standby generators for fire pump applications in accordance with Article 695 of the NEC.

A controller that is marked as suitable for use in legally required standby systems in accordance with Article 701 of the NEC is also suitable for use in optional standby systems in accordance with Article 702 of the NEC.

Instrument transformers are not evaluated as part of the investigation, unless the manufacturer provides the instrument transformer as part of the generator controller.

**Note:** The numbers and acronyms from IEEE C37.2, “Electric Power System Device Function Numbers, Acronyms, and Contact Designations,” are provided to supplement the associated code with industry standard device function numbers and acronyms for reference purposes only. Multiple secondary codes may be associated with a single product.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Engine and Generator Status Annunciator
- Engine Controller
- Engine Generator Controller
- Engine Status Annunciator
- Generator Controller
- Generator Status Annunciator

### RELATED PRODUCTS

Utility interactive, stand-alone, and multimode inverters and converters intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Programmable devices whose primary function is the control of industrial equipment are covered under Programmable Controllers (NRAQ).

Programmable controllers intended for the control of industrial equipment and which include safety-related functions (i.e., functional safety applications) are covered under Programmable Safety Controllers (NRGF).

Primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances are covered under Controls, Limit (MBPR).

Equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations in an industrial process application are covered under Process Control Equipment, Electrical (QUX).

### ENGINE GENERATOR ENCLOSURES, CONSTRUCTION ONLY (FTPP)

This category covers engine generator enclosures (also known as weather housings) investigated for electrical and mechanical construction only. These enclosures are intended to be installed on certified stationary engine generators in the field or in a factory. The enclosure assemblies may include components such as mufflers, lights, heaters, fans, battery chargers, alarms, and other accessories certified to component standards. As these component investigations vary in the type and level of testing to which they are subjected by the component standard, additional testing may be needed as part of the overall engine generator investigation to address their performance in the entire system.

In most cases the combination of a certified engine generator enclosure and an engine generator will require additional investigation and testing to establish the compliance of the overall combined product. Complete overall product assemblies that have been so investigated are identified by the Certification Mark for Engine Generators (FTSR) on the outside of the engine generator enclosure or weather housing.

This category also covers enclosures that have been investigated with particular generators. In this case, the combination of the specific generator and specific enclosure is identified as part of the enclosure certification.
### ENGINE GENERATORS FUELED BY BIOGAS OR RAW NATURAL GAS (FTPU)

**GENERAL**

This category covers electrical generating equipment driven by internal-combustion engines including gas turbines, fueled by biogas, nonsweet or raw sources of natural gas. These gases may contain unknown chemicals, contaminants and energy content. Biogas is produced by the anaerobic decomposition of organic matter. Raw and nonsweet natural gas is often a by-product of oil wells. This equipment has been certified as to risk of electric shock and fire hazards only.

Certified stationary engine generators are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code;" ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines," and other standards as applicable. Due to the potential variable nature of these fuel sources, the equipment manufacturer, system designer, installer, Authority Having Jurisdiction, and service personnel need to ensure the equipment is sited, installed, operated and maintained in a manner appropriate for the equipment, installation location and fuel source. Special attention should be placed on the appropriateness of the gas train/fuel system components for the fuel type and the detection of potential gas leakage. Authorities Having Jurisdiction should be consulted as to conformance with applicable codes.

### FACTORS NOT INVESTIGATED

The effects of undefined gases on this equipment have not been investigated. Additionally, the ability or inability of any interposed filtering or scrubbing equipment to mitigate the effects of the undefined gases has not been investigated. This includes, but is not limited to the operation of the equipment, degradation of the equipment, leakage of gases, etc.

### RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKI). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, and interconnection system equipment.

### ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

For engine and engine generator control panels and assemblies that operate, control and supervise an engine or engine generator’s operational functions, see Engine Generator Controls (FTP2M).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY, the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- **AS TO CONSTRUCTION ONLY** or
- **AS TO CONSTRUCTION ONLY FOR USE WITH UL-CERTIFIED [manufacturer’s name and model no(s).]**

### Alternate UL Mark

**ENGINE GENERATOR**

Alternate UL Mark

**ENGINE GENERATOR WEATHER HOUSING**

**Manufacturer’s name and model no(s).**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### ENGINE GENERATORS FUELED BY BIOGAS OR RAW NATURAL GAS (FTPU)−Continued

**GENERAL**

“National Electrical Code;” ANSI/NFPA 37, “Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines,” and other standards as applicable. Due to the potential variable nature of these fuel sources, the equipment manufacturer, system designer, installer, Authority Having Jurisdiction, and service personnel need to ensure the equipment is sited, installed, operated and maintained in a manner appropriate for the equipment, installation location and fuel source. Special attention should be placed on the appropriateness of the gas train/fuel system components for the fuel type and the detection of potential gas leakage. Authorities Having Jurisdiction should be consulted as to conformance with applicable codes.

### FACTORS NOT INVESTIGATED

The effects of undefined gases on this equipment have not been investigated. Additionally, the ability or inability of any interposed filtering or scrubbing equipment to mitigate the effects of the undefined gases has not been investigated. This includes, but is not limited to the operation of the equipment, degradation of the equipment, leakage of gases, etc.

### RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKI). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, and interconnection system equipment.

### ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

For engine and engine generator control panels and assemblies that operate, control and supervise an engine or engine generator’s operational functions, see Engine Generator Controls (FTP2M).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY, the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- **AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY**

### Alternate UL Mark

**ENGINE GENERATOR**

Alternate UL Mark

**ENGINE GENERATOR WEATHER HOUSING**

**Manufacturer’s name and model no(s).**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
This category covers equipment ground-fault protective devices (EGFPDs) that operate to disconnect the electric circuit from the source of supply when ground-fault current exceeds the ground-fault pick-up level marked on the device.

To aid the user in making proper selection of this equipment, the EGFPDs are marked with a ground-fault pick-up level in milliamperes and with a voltage and current rating. The ground-fault pick-up level is limited to the range above 6 mA to 100 mA. These devices are intended to operate upon a condition of excessive ground-fault leakage current from equipment, rather than minimize damage due to arcing faults in services.

EGFPDs are intended to be installed only on grounded alternating-current systems in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). EGFPDs are intended for use in applications where ground-fault protection of equipment is required by the NEC, specifically Sections 426.28 and 427.22, or where such protection is deemed appropriate.

A two-wire device is not suitable for use in a multivolt branch circuit as defined in the NEC.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- EGFPD: Equipment Ground-fault Protective Device

**RELATED PRODUCTS**

These devices have not been investigated as to providing electric shock protection for personnel, and they are not intended to be used in place of a ground-fault circuit interrupter (GFCI) where a GFCI is required by the NEC. See Ground-fault Circuit Interrupters (GFCIs) for further information.

These devices are not intended to be used in electrical service-entrance equipment where ground-fault sensing and relaying equipment, required by Section 230.95 of the NEC, is used. See Ground-fault Sensing and Relaying Equipment (KDXA) for further information.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

**PRODUCT CATEGORIES BY CATEGORY CODE**

- FTTE: Equipment Ground-fault Protective Devices
- FTWG: Engine Control Equipment and Generator Assemblies for Use in Hazardous Locations

**ENGINE CONTROL EQUIPMENT AND ENGINE GENERATORS FOR USE IN HAZARDOUS LOCATIONS (FTWG)**

This category covers engine control equipment, which is electrical equipment for the control and operation of stationary internal combustion engines and gas turbines in Class I, Division 2 hazardous locations. This equipment is intended to be installed in accordance with ANSI/NFPA 37, “Standard for the Installation and Use of Stationary Internal Combustion Engines and Gas Turbines.”

This category also covers engine generators, which are electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines or gas turbines for use in Class I, Division 2 hazardous locations.

Listed stationary engine generator assemblies are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI/NFPA 37, “Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines.” The protection method employed for installations in hazardous locations is Purging and Pressurization in accordance with ANSI/NFPA 496, “Standard for Purged and Pressurized Enclosures for Electrical Equipment.”
**EXIT SIGNS AND EXIT APPLIANCES (FUDQ)**

This category covers exit signs and exit appliances as identified by the following specific product categories.

The installation and use of these devices are specified in NFPA 101, “Code for Safety to Life from Fire in Buildings and Structures.”

These products have not been investigated with reference to fire resistance. Related devices that have been evaluated for fire resistance are covered in the Fire Resistance Directory.

**EXIT DOORS (FUXV)**

**USE AND INSTALLATION**

The category covers sliding, swinging and bifold doors incorporating a panel that can be manually opened to permit exit travel. Rules covering installation and use are contained in ANSI/NFPA 101, “Life Safety Code.” The assembly consists of a frame, doors and necessary hardware.

This category does not cover the electrical and pneumatic door operators or the glass portions of the doors, partitions, panels or sections. Electrical and pneumatic door operators are covered under Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDW).

**PRODUCT IDENTIFIER**

One of the following product identities appears on the product:

- Bifold Exit Door
- Exit Door
- Sliding Exit Door
- Swinging Exit Door

**RELATED PRODUCTS**

See Fire Doors (GSNV).

**ADDITIONAL INFORMATION**

For additional information, see Building Materials (AABM).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 1356, “Outline of Investigation for Exit Doors.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ignition Control for Use in Hazardous Locations.”

---

**IGNITION CONTROLS FOR USE IN HAZARDOUS LOCATIONS (FTWL)**

**USE AND INSTALLATION**

This category covers ignition controls intended for use with stationary internal-combustion engines and gas turbines in Class I, Division 2 hazardous locations. These devices are power supplies that provide a controlled high-voltage output for igniters or other similar spark-producing devices. The igniters or other spark-producing devices are installed in the combustion chamber(s) of the engine or turbine.

This equipment is intended to be installed in accordance with ANSI/NFPA 37, “Installation and Use of Stationary Combustion Engines and Gas Turbines.” The input of line-powered equipment is provided with means for connection of one of the wiring methods permitted for Class I, Division 2 hazardous locations in ANSI/NFPA 70, “National Electrical Code.” The ignition output (engine or turbine wiring) of all equipment is provided with means for connection of one of the wiring methods permitted in ANSI/NFPA 37.

The high-output-voltage levels of this equipment can produce electrical shock. Care should be taken to follow the installation instructions provided with the equipment, including grounding of the equipment and proper output connections. Operating personnel should be carefully instructed regarding its correct operation and maintenance.

**FACTORS NOT INVESTIGATED**

This equipment has not been investigated for use with engines or turbines that provide critical functions, such as emergency power or fire protection.

**PRODUCT IDENTIFIER**

The following product identity appears on the product:

- Ignition Control for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Engine Control Equipment for Use in Hazardous Locations (FTVW) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 2200, “Stationary Engine Generator Assemblies.” The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ignition Control for Use in Hazardous Locations.”

---

**ENGINE CONTROL EQUIPMENT AND ENGINE GENERATORS FOR USE IN HAZARDOUS LOCATIONS (FTWV)**

**Engine Generators for Use in Hazardous Locations (FTWG) – Continued**

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 2200, “Stationary Engine Generator Assemblies.” The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ignition Control for Use in Hazardous Locations.”
EXIT FIXTURES (FWBO)

Panic Hardware (FVSR)−Continued

PRODUCT IDENTITY
The following product identity appears on the product:

Panic Hardware

RELATED PRODUCTS
Assemblies investigated for fire resistance are covered under Fire-exit Hardware (GXHX).

Assemblies investigated with reference to access control system units are covered under Special Locking Arrangements (FWAX) or Controlled Exit Panic Devices (FULA).

ADDITIONAL INFORMATION
For additional information, see Exit Signs and Exit Appliances (FUDQ) and Building Materials (AABM).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “CERTIFIED,” a control number, and the product name “Exit Fixture.”

ADDITIONAL INFORMATION
Use and Installation
This category covers exit signs that utilize a nonelectrical illumination power source, including exit signs containing self-luminous gases or with a photoluminescent surface activated by external illumination. These signs are intended for installation in accordance with ANSI/NFPA 101, “Life Safety Code,” the “International Building Code,” and other codes governing the marking of the means of egress.

These exit signs have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. These marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All exit signs have been investigated for use in ambient temperatures of 20 – 30°C (68 – 86°F) unless otherwise marked with an extended use temperature range.

Exit signs that have been investigated for mounting near the floor are marked, where visible after installation, “Suitable for Floor Proximity Installation” or equivalent wording.

These exit signs have been investigated for visibility from 100 feet unless marked, where visible after installation, with a maximum viewing distance of 50 or 75 feet.

EXTERNAL ILLUMINATION
Exit signs whose visibility is dependent on external illumination (such as photoluminescent signs) are intended for installation only where such external illumination is deemed reliable and sufficient by the Authority Having Jurisdiction and where the lighting controls are accessible only to authorized personnel. Where compliance with the visibility requirements requires external illumination greater than 1 ft-c, these signs are marked, where visible after installation, for a minimum 5 ft-c illumination, measured on the face of the sign. If specific type(s) of lighting are needed to achieve the required visibility, the lighting type is also marked on the sign where visible after installation.

REPLACEMENT DATE
Exit signs whose visibility is expected to decline over time (such as those containing self-luminous gases) are marked, where visible after installation, with a replacement date.

PRODUCT IDENTITY
One of the following product identities appears on the product:

Photoluminescent Exit Sign
Self-luminous Exit Sign

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Building Materials (AABM).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

LOOK FOR THE UL MARK ON PRODUCT
**EXIT SIGN CONVERSION KITS (FWCF)**

**GENERAL**

This category covers exit sign conversion kits, which are parts and/or subassemblies intended for field installation in specific certified exit fixtures (see Exit Fixtures (FWBO)) or exit lights (see Emergency Lighting and Power Equipment (FTBR)). They convert the light source from one type to another (e.g., incandescent to LED), primarily for energy-saving purposes. They have been investigated to determine that when used in accordance with the manufacturer’s instructions, they do not adversely affect the operation of the complete exit sign. Their use is subject to the conditions indicated on the installation instructions provided with the kit.

Conversion kits are of one of the following type designations:

- **Type EFS (Exit Fixtures Specific)** — A conversion kit intended for use with one or more specific exit fixture(s) identified by manufacturer and catalog number on the kit and in the installation instructions.

- **Type ELS (Exit Light Specific)** — A conversion kit intended for use with one or more specific exit fixture(s) identified by manufacturer and catalog number on the kit and in the installation instructions.

Exit sign conversion kits are intended for use in indoor, dry locations unless marked “Suitable for Wet Locations,” “Suitable for Indoor Wet Locations,” or “Suitable for Damp Locations.” Exit sign conversion kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

**REQUIREMENTS**

The basic standard used to investigate the exit fixtures to exit light conversions in ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**EXIT SIGN CONVERSION KIT, TYPE EFS**

FOR USE ONLY WITH EXIT FIXTURE MODEL [model number(s)] MANUFACTURED BY [manufacturer’s name] *

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**EXIT SIGN TO EXIT LIGHT CONVERSIONS, RETROFIT (FWCN)**

**GENERAL**

This category covers exit fixture to exit light conversions, which are parts and/or subassemblies intended for field installation in specific certified exit fixtures identified by catalog numbers and company name. They are retrofit devices to convert specific exit fixtures to exit lights with integral battery providing emergency power, and may also convert the light source from one type to another (e.g., incandescent to light-emitting diodes) when installed in accordance with the manufacturer’s instructions. These conversions have been investigated to determine that when used in accordance with the manufacturer’s instructions, the converted exit fixture complies with the applicable requirements for exit lights.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

**REQUIREMENTS**

The basic standard used to investigate the exit fixture to exit light conversions is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**EXIT FIXTURE TO EXIT LIGHT CONVERSIONS, RETROFIT FOR USE ONLY WITH EXIT FIXTURE MODEL [model number(s)] MANUFACTURED BY [manufacturer’s name] **

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:
Exit Signs and Markers for Use in Zone Classified Hazardous Locations (FWJD)—Continued

intended only for installation in corridors or rooms where the distance to the exit sign cannot exceed the marked maximum distance.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Exit Marker for Use in Hazardous Locations
- Exit Sign for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Exit Sign for Use in Hazardous Locations” or “Exit Marker for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EXIT SIGN RETROFIT KITS (GGET)**

**USE AND INSTALLATION**

This category covers exit sign retrofit kits, which are parts and/or subassemblies intended for field installation in certified Exit Fixtures (FWBC) or certified Exit Lights (FTBR), employing not more than two light sources. They convert the light source from one type to another (e.g., incandescent to LED), primarily for energy-saving purposes. They have been investigated by UL to verify that the converted exit sign retains visibility comparable to and does not otherwise adversely affect the operation of the original sign. Their use is subject to the conditions indicated on the installation instruction provided with the kit.

**Retrofit kits are one of the following type designations:**

- **Type EFG (Exit Fixture General)** — A retrofit kit intended for use only in single or double-faced exit fixtures having a legend not exceeding 6 in. (152 mm) in height. Replacement diffusers are included. Type EFG kits are suitable for use with UL-certified exit fixtures of the following interior dimensions: 6-1/4 to 8-7/8 in. high, 9-1/2 to 13-7/16 in. wide, and 7/8 to 3-1/4 in. deep.

- **Type EFI (Exit Fixture Independent)** — A retrofit kit that includes a light source, light reflecting media enclosure, diffuser, legend, and two directional indicators, intended to retrofit any UL-certified exit fixture having a legend not exceeding 6 in. (152 mm) in height. Type EFI kits are self-contained assemblies that are independent of the exit fixture except for mechanical support and electrical supply.

- **Type ELG (Exit Light General)** — Same as Type EFG except intended for use only in UL-certified exit lights, which are energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

- **Type ELI (Exit Light Independent)** — Same as Type EFI except intended for use certified exit lights energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

Exit sign retrofit kits are intended for use in indoor, dry locations unless marked “Suitable for Wet Locations,” “Suitable for Indoor Wet Locations” “Suitable for Damp Locations” (see FTBR).

Exit sign retrofit kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

These kits are intended for installation into UL-certified products that bear the product identity of “Exit Fixture” (for Types EFG and EFI) or “Emergency Lighting Equipment” (for Types ELG and ELI) as part of the Certification Mark.

**FACTORY AUTOMATION EQUIPMENT (GPNY)**

**USE AND INSTALLATION**

This category covers production equipment for attended and unattended assembly of products and subassemblies. This equipment is designed to be programmed for a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, or hole punching or cutting. The equipment may also incorporate manufacturing processes involving heating or cooling, drying, or gluing of parts.

This equipment is intended to be installed in accordance with ANSI/ NFPA 79, “Electrical Standard for Industrial Machinery,” and Article 670 of ANSI/NFPA 70, “National Electrical Code.”

**SPECIAL CONSIDERATIONS**

This equipment is not intended for the handling of hazardous materials in unattended applications, or intended for fire protection service.

**PRODUCT IDENTIFICATION**

The following product identity appears on the product:

- **Factory Automation Equipment**

**RELATED PRODUCTS**

Robots and associated control equipment are covered under Robots and Robotic Equipment (TETZ).

Industrial control panels are covered under Industrial Control Panels (NITW).
Equipment intended primarily for measurement of physical or chemical properties of materials, measurement of the functional performance of a piece of equipment, qualitative or quantitative constituent analysis of substances, or preparation of materials for further analysis or measurements is covered under Laboratory Use Electrical Equipment (OGTK). ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 2011, “Outline of Investigation for Factory Automation Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Factory Automation Equipment.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ADDITIONAL INFORMATION**

This category covers attended or unattended production equipment provided fully assembled or provided as subassemblies, including skid-mounted versions. This equipment is designed for a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, or hole punching or cutting. The equipment may also incorporate manufacturing processes, such as heating or cooling, drying, or gluing of parts.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.” The basic standard used to investigate products in this category is ANSI/UL 506 and 670 of ANSI/NFPA 70, “National Electrical Code.”

**SPECIFIC CONSIDERATIONS**

This product is not intended for the handling of hazardous materials in unattended applications, or intended for fire-protection service.

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**PRODUCT MARKINGS**

For additional information, see Equipment for Use and Installation in Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations requirements used to investigate products in this category are contained in UL Subject 2011, “Outline of Investigation for Factory Automation Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
FANS, CEILING SUSPENDED (GPRT)

GENERAL

This category covers:

Ceiling-suspended fans intended to be mounted to a ceiling outlet box or ceiling building structure, and whose blades rotate below the ceiling to move air for the purpose of air circulation.

Ceiling-suspended fans intended for mounting beneath a ceiling structure and whose blades rotate below the ceiling to move air for the purpose of air circulation.

Ceiling-suspended fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

This category does not cover ceiling-suspended fans intended to be used in hazardous (classified) locations as defined by ANSI/NFPA 70, “National Electrical Code,” or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment.

PRODUCT MARKINGS

Ceiling-suspended fans intended for mounting beneath a ceiling structure, such as provided on porches or patios, have been subjected to a water-spray test and are marked as being acceptable for such use.

Ceiling-suspended fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

PRODUCT IDENTITIES

One of the following product identities appears on the product:

- Ceiling Fan
- Ceiling-suspended Fan
- Fan Accessory

Other product identities may be used as shown in the individual listings.

RELATED PRODUCTS

Fan-speed controllers for use with fans are covered under Fan-speed Controllers (GQHQ).

FANS, ELECTRIC (GPWV)

GENERAL

This category covers:

Fans and blowers intended to move air for the purpose of air circulation and ventilation.

Dryer-type fans used for drying carpets or floors.

This category does not cover:

- Permanently installed fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation.
- Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilators.

PRODUCT MARKINGS

Fans intended for use in barns, poultry houses, dairy barns or the like, as covered by Article 547 of the NEC, are marked “For Use in Agricultural Buildings” or with an equivalent statement.

Fans intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components and are marked “Outdoor Use.”

When an appliance consists of two or more subassemblies shipped separately, each subassembly or packaging is marked to indicate those other subassemblies that may be used to complete an assembly, if the installation is not obvious.

PRODUCT IDENTITIES

One of the following product identities appears on the product:

- Electric Fan
- Fan
- Fan Accessory

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Permanently installed fans are covered under Fans, Electric, Permanently Installed Type (GPWX).

Fans and blowers intended to move heated or conditioned air are covered under Ventilators, Power (ZACT). Fans that include filters or means to control humidity or cool air are covered under Air Filtering Appliances (AEDX), Humidifiers (AIHV) or Evaporative Coolers (AGNY).

Hand dryers incorporating heaters are covered under Heaters, Specialty (KSOQ).

Compressor-type fans are covered under Compressors, Vacuum Pumps and Paint Sprayers (QDGS).

Fan-type deodorizers and fan-type air fresheners are covered under Deodorizers and Air Fresheners (EOQX).

Ionizers and fans employing ionizers are covered under Ion Generators (OETX).

Fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Fans intended to be mounted to a ceiling outlet box or ceiling building structure and whose blades rotate below the ceiling to move air are covered under Fans, Ceiling Suspended (GPRT).

Light kits for ceiling-suspended fans are covered under Fans, Ceiling Suspended (GPRT).

FANS, CEILING SUSPENDED (GPRT)

GENERAL

This category covers:

Fans and blowers intended to move air for the purpose of air circulation and ventilation.

Dryer-type fans used for drying carpets or floors.

This category does not cover:

- Permanently installed fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation.
- Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilators.

PRODUCT MARKINGS

Fans intended for use in barns, poultry houses, dairy barns or the like, as covered by Article 547 of the NEC, are marked “For Use in Agricultural Buildings” or with an equivalent statement.

Fans intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components and are marked “Outdoor Use.”

Fans intended to be mounted to a ceiling outlet box or ceiling building structure and whose blades rotate below the ceiling to move air are covered under Fans, Ceiling Suspended (GPRT).

Light kits for ceiling-suspended fans are covered under Fans, Ceiling Suspended (GPRT).
FANS, ELECTRIC, PERMANENTLY INSTALLED TYPE (GPWX)

GENERAL

This category covers:

Permanent installation fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation. Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilating hoods.

This category does not cover:

Fans intended to be used in hazardous (classified) locations as defined by ANSI/NFPA 70, National Electrical Code (NEC), or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment.

Air heaters incorporating fans, heating-ventilating units, or blowers comprised of such equipment as furnaces, mechanical-refrigeration equipment or air conditioners.

Portables, cord-connected fans

Fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

Although ceiling-insert fans and wall-insert fans, and ceiling-insert fan/light combinations employ an internal plug-and-receptacle connection for the motor and light, they are not considered cord-and-plug-connected to the source of supply. These internal connections are provided to facilitate rough-in installation of the permanently wired housing while protecting electrical components (motor and light) until the finishing stage.

These fans have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with Authorities Having Jurisdiction.

Fans have not been investigated for installation in the plenum space or "other spaces used for environmental air," as defined by the NEC.

Fans and accessories intended for use over cooking equipment are investigated to determine the effect of grease on electrical parts. These units are for use over residential gas or electric ranges or ovens only and include hood fans. These fans are intended for use over (but not mounted directly on) ranges, separate hoods provided with lights or other wiring and intended for use over ranges in conjunction with wall or ceiling install fans, and oven ventilators for use over wall oven vents.

Fans intended for use over eye-level ranges have been investigated for use when mounted separately above a representative eye-level range.

Some wall-insert and ceiling-insert fans have been investigated for use in conjunction with separate hoods over cooking equipment (above and are so marked.

Fans intended for mounting directly on cooking equipment are investigated in conjunction with the cooking appliance and certified as a part of the accessory to the cooking appliance.

Filtered fans provided on fans intended for use over cooking equipment are investigated with respect to flammability and smoke propagation.

Fans installed in an area in close proximity to a stove, range or oven where fumes, grease-laden air or the like may be present and intended to discharge air away from the cooking area are intended to be installed in such a manner as to discharge the air to the exterior of the building and not into concealed walls or ceiling spaces or into the attic. Dustless fans intended for use in cooking areas are not required to discharge air to the building exterior.

Ventilating hood fans or hoods have been intended for use over ranges and incorporating a shelf or a compartment to accommodate a microwave oven are marked for such use.

Except for fans over gas ranges and ovens, none of the fans covered in this category have been investigated for use over cooking appliances that use fuel.

PRODUCT MARKINGS

FANS, ELECTRIC, PERMANENTLY INSTALLED TYPE (GPWX)

Fans intended for use in barns, poultry houses, dairy barns or like use, as covered by Article 547 of the NEC, are marked "For Use in Agricultural Buildings" or with an equivalent statement.

Ceiling-insert fans, wall-insert fans, and ceiling-insert fan/light combinations marked "Acceptable for use over a bathtub or shower when installed in a GFCI protected branch circuit" are intended for use anywhere within a bathroom ceiling surface, including over bathtubs, showers, or within the zone above the bathtub and shower area as defined by Article 410 of the NEC. These products are investigated to determine the effects of moisture (dampness or wetting), such as shower spray. Products without this marking are intended for use anywhere within a bathroom ceiling surface, excluding the area directly above the footprint of the bathtub or shower, intended for mounting beneath a ceiling structure, such as provided on porches or patios, have been subjected to a rain test and are marked as being acceptable for such use.

Fans intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components and are marked "Outdoor Use." Roof-mounted fans are investigated to determine the effect of rain on electrical components, but are not required to be marked for outdoor use. Gable-mounted attic fans are normally installed with shutters and are not subjected to a rain test; similarly, wall insert fans are not subject to a rain test, if marked to indicate that shutters are to be provided. Fans intended for mounting in interior walls or ceilings are marked to indicate the intended use, unless the design is such as to make the intended method of installation obvious.

Fans intended for use in damp-location cooking areas have been subjected to a water spray test and are marked "Suitable for use in damp locations when installed in a GFCI protected branch circuit."

Ceiling-insert fan/light combinations are not intended for use in an insulated ceiling unless marked "Type IC – Inherently Protected" or "Type IC – Thermally Protected."

When an appliance consists of two or more subassemblies shipped separately, each subassembly or packaging is marked to indicate these other subassemblies that may be used to complete an assembly, if the installation is not obvious.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Electric Fan
- Fan Accessory
- Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

PORTABLES

Portable, cord-connected fans are covered under Fans, Electric (GPWV). Fans and blowers intended to move heated or conditioned air are covered under Ventilators, Power (ZACT).

Fans that include filters or means to control humidity or cool air are covered under Air Filtering Appliances (AEDX), Humidifiers (AHIV) or Evaporative Coolers (AGNY).

Hand dryers incorporating heaters are covered under Heaters, Specialty (KSOY).

Accessory kits to adapt a rangehood intended for permanent connection to the power supply to a cord-connected rangehood are covered under Rangehood Cord-connection Kits (GQFM).

Rangeproducts and power ventilators intended for commercial applications are covered under Power Ventilators for Commercial Kitchen Exhaust (YZZH), Exhaust Hoods Without Exhaust Dampers (YWCW), Exhaust Hoods with Exhaust Dampers (YZZQ) and Hoods/Recirculating Systems for Use with Specified Commercial Cooking Appliances (YZCT).

Microwaves employing cooking-area ventilation are covered under Microwave Cooking Appliances (KQSO).

Compressor-type inflators are covered under Compressors, Vacuum Pumps and Paint Sprayers (QDQS).

Fan-type deodorizers and fan-type air fresheners are covered under Deodorizers and Air Fresheners (EOGX).

Ionizers and fans employing ionizers are covered under Ion Generators (OETX).

Fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AAGZ).

Fans intended to be mounted to a ceiling outlet box or ceiling building structure and whose black plate below the ceiling to move air are covered under Fans, Ceiling Suspended (GPRT).

Light kits for ceiling-suspended fans are covered under Fans, Ceiling Suspended (GPRT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, Electric Fans."
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fan,” “Electric Fan” or “Fan Accessory,” or other appropriate product name as shown in the individual Listings. The Listing Mark for this category requires the use of a holographic label.

RANGEHOOD CORD-CONNECTION KITS (GQFM)

USE AND INSTALLATION

This category covers rangehood cord-connection kits intended to adapt specific rangehoods for cord connection to the power supply. These rangehood cord-connection kits are limited to installation with specific makes and models of rangehoods as indicated on the rangehood cord-connection kit packaging and in the installation instructions.

PRODUCT IDENTITY

The following product identity appears on the product:

RANGEHOOD CORD-CONNECTION KIT

ADDITIONAL INFORMATION

See Fans, Electric, Permanently Installed Type (GPWX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, “Electric Fans.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

FAN-SPEED CONTROLS (GQGH)

GENERAL

This category covers semiconductor, capacitive type, and inductive-type fan-speed controls for regulating the speed of the motor of a fan. In some cases the devices also control the starting and stopping of the fan motor. Fan-speed controls are intended for use only with single or multiple fans in parallel where the total controlled load is not in excess of the rating of the controller.

These products may be outlet box-mounted, cord-and-plug connected, or intended for mounting in the fan canopy. Cord-and-plug-connected controls are intended for control of cord-and-plug-connected fans only.

PRODUCT MARKINGS

Controls marked “Ceiling Fan” or “Paddle Fan” are intended only for use with one or more fans of this type.

Controls marked “General Use” are intended to be used with any motor-driven fan, including ceiling-suspended fans, as permitted by instructions provided with the fan.

Fan-speed controls using semiconductors for regulation are marked “Solid-State Fan Speed Control.”

Fan-speed controls using capacitors or inductors for speed control may be marked to indicate the method of speed control.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Fan-speed Control

Solid-state Fan-speed Control

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1917, “Solid-State Fan Speed Controls.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

FANS, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (GQJA)

GENERAL

This category covers stationary and portable electric fans. Fans are provided with motors certified for the location in which the fan will be used. Portable fans are sealed from terminal compartments which have provision for connection of three-conductor, flexible, extra-hard-usage cord having a grounding conductor. Connection of portable fans to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which portable equipment is permitted for use. It is recognized that portable equipment should be used only where necessary.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Electric Fan for Use in Hazardous Locations

Portable Electric Fan for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, “Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
**GENERAL**

This category covers stationary and portable electric fans. Fans are provided with motors certified for the location in which the fan will be used.

Connection of portable fans to supply lines requires the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The cord is connected to the unit with a fitting certified for the type of explosion protection for the wiring compartment to which it is connected. The cord connected to the unit should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which portable equipment is permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Fan for Use in Hazardous Locations
- Portable Electric Fan for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**FC CABLE (GQKT)**

**USE AND INSTALLATION**

This category covers Type FC cable which is an assembly of three or four parallel 10 AWG special stranded copper wires formed integrally with an insulating material web. Type FC cable is intended for installation in accordance with Article 322 of ANSI/NFPA 70, “National Electrical Code.”

The cable is marked with the size of the maximum branch circuit to which it may be connected, the cable type designation, manufacturer’s identification, and trade name, working voltage, conductor size, voltage rating, and temperature rating.

Type FC cable is not intended to be installed outdoors or in wet or damp locations unless identified for use in wet locations.

A marking accompanying the cable on a tag or reel indicates the special marking values and specific FC cable fittings with which the cable is intended to be used.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erecter, electrical contractor, inspector and others concerned with the installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- FC Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**FC CABLE FITTINGS (GQRS)**

**USE AND INSTALLATION**

This category covers power tap and cable termination fittings intended for use with FC cable installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

A fitting is suitable for use only with cable identified for use with that fitting.

Installation instructions are provided by the manufacturer.

**PRODUCT IDENTITY**

**GENERAL**

This category covers portable pneumatic fans for use in hazardous locations. Air-supply lines should be made of electrically conductive material in accordance with ANSI/NFPA 77, “Recommended Practice on Static Electricity,” and/or any other applicable code. Ground terminal connections should be properly made and maintained.

 Authorities Having Jurisdiction should be consulted with regard to conditions under which this portable equipment will be permitted for use. Portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Portable Pneumatic Fan for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.
FENCE CONTROLLERS, ELECTRIC (GQYR)—Continued

One of the following product identities appears on the product:

- Cable Feed
- FC Cable Fitting
- Power Tap

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see FC Cable (GQKT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, “Attachment Plugs and Receptacles,” and ANSI/UL 486A-486B, “Wire Connectors.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “FC Cable Fitting,” “Power Tap” or “Cable Feed,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FENCe CONTROLLERS, ELECTRIC (GQYR)

GENERAL

This category covers electric-fence controllers intended for use with conductive fences installed in rural locations, insulated from ground, for the containment of livestock. The fire and electric shock hazards incident to the use of these fences have been reduced to a reasonable degree, provided installation and operation are in accordance with the nameplate information.

Requirements for the operation of electric-fence controllers provide for intermittent energizing of the fence when currents of sufficient magnitude to prevent voluntary breaking of contact are involved. An “off” period between impulses is provided in which voluntary muscular control can be regained and contact with the fence broken. It should be recognized that failure to break contact with the fence, due to other than electrical causes, may dangerously increase the hazard related to the use of these devices. Electric-fence controllers are classified according to the source of supply of the unit and the intended installation.

This category does not cover electric-fence controllers intended for security purposes.

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Electric-fence Controller

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 69, “Electric-Fence Controllers.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Fence Controller.”

Fire doors are intended for installation in conjunction with fire door frames, hardware, and/or other accessories that together form a fire door assembly, which provides the degree of fire protection for the opening. For certifications of fire doors, see:

- Access-type Fire Doors (GSO1)
- Bullet-resisting-type Fire Doors (GSOX)
- Chute-type Fire Doors (GSPR)
- Curtain-type Fire Doors (GSOX)
- Dumbwaiter-type Fire Doors (GSRV)
- Freight-elevator-type Fire Doors (GSSH)
- Freight-elevator-type Fire Door Retrofit Parts (GSSZ)
- Passenger-elevator-type Fire Doors (GUX)
- Rolling Steel Fire Doors (GSV)
- Service-counter-type Fire Doors (GSWT)
- Sliding-type Fire Doors (GSX)
- Special-purpose Fire Doors (GSXZ)
- Swinging-type Fire Doors (GSYX)
- Finishers of Fire Doors (GSZ)
- Swinging-type Fire Door Retrofit Parts (CSZ)
- Swinging-type Fire Doors, Positive-pressure Tested (GSZ)

Fire doors are designed for the protection of openings in walls and partitions against fire when installed in accordance with ANSI/NFPA 80, “Fire Doors and Other Opening Protectives.”

The rating of 4-1/2, 1-1/2, or 3/4 h, or 30 or 20 minutes indicates the duration of exposure to fire. As indicated in the individual certifications, some manufacturers can furnish sliding- and swinging-type doors that are Classified for 4 hours.

Classification Marks with 3 h ratings have replaced the “Fire Door for Opening in Fire Wall” and “A” Classification Marks; the 1-1/2 h and 1 h Classification Marks have replaced the “Fire Door for Opening in Vertical Shaft” and “B” Classification Marks; the 3/4 h Classification Marks have replaced the “Corridor and Room Partition” and “C” Classification Marks; the 1-1/2 h Classification Marks have also replaced the “Fire Door for Opening in Exterior Wall,” the “Fire Shutter for Opening in Exterior Wall” and the “D” Classification Marks; the 3/4 h Classification Marks have also replaced the “Fire Door for Opening to Exterior Fire Escape” and “E” Classification Marks.

Some fire doors contain a temperature-rise rating in the Classification Mark. This rating is intended for use in determining compliance with the temperature-rise requirements contained in the “International Building Code,” ANSI/NFPA 101, “Life Safety Code,” and/or ANSI/NFPA 500, “Building Construction and Safety Code.” A temperature-rise rating of 250°F, 450°F or 650°F applies to the temperature rise developed on the unexposed surface of the door after the first 30 min of fire exposure. Classification Marks that do not indicate a temperature rise are for doors which develop a temperature rise in excess of 650°F on the unexposed surface of the door. All doors with glass lights in excess of 100 sq in. are not eligible for a temperature-rise rating. Doors with glass light panels of 100 sq in. or less carry the same rating as similar doors without glass vision panels.

Glazing materials covered under this category are Classified as to fire resistance only. The glazing materials are intended to be installed in the fire doors in accordance with ANSI/NFPA 80 and the installation instructions provided by the manufacturer of the door, glass light frame or glazing material. See Fire Door Glass Light Frames (GVVX) and Fire-protection-rated Glazing Materials (KCMZ).

A door prepared at the factory for a glass light includes the glazing members (frame) but normally does not include the glazing itself. Glazing materials are usually provided by other than the door manufacturer and installed at the time of the door installation.
The protection of an opening depends not only upon the use of fire doors, but also upon the use of Listed door frames and other Listed accessories as specified under each door type. Prospective users should first ascertain from Authorities Having Jurisdiction which door type, mounting, Listed hardware, Listed door frame, and Listed closing mechanism are acceptable for a specific location.

While doors of the freight elevator type, rolling steel type, and sliding or swinging steel-covered composite type, hollow-metal type, metal-clad (Kalamein) type, sheet-metal type and tin-clad type exceeding the sizes recorded in the tabulations under their respective types have not been subjected to fire tests, a Certificate for Oversized Fire Door can be provided for door assemblies in compliance (except for size), with all requirements for design, materials and construction. The Oversize Certificate can be a separate certificate or a label certificate affixed to the door assembly. Similarly, an attached or separate Certificate for Passenger Elevator Fire Door Frame Assemblies incorporating a transom panel can be provided when such frame/transom panel assemblies, designed for use with specific Classified Passenger Elevator Fire Doors and Listed Passenger Elevator Fire Door Hardware, exceed the maximum heights which have been subjected to Standard Fire Tests. As with the oversize doors described above, prospective users should first ascertain from the Authority Having Jurisdiction whether the oversize frame assembly is acceptable for any given location. Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these products.

**POSITIVE-PRESSURE FIRE DOORS**

To assist in selecting components of fire door assemblies tested under positive pressure, eight categories, identified as A through J, were established.

**Category A Doors** — A fire door that does not require the addition of other components such as edge seals to comply with positive-pressure requirements. It also includes doors that have been prepared with edge seals in the manufacturing process. See Swinging-type Fire Doors, Positive-pressure Tested (GSZ) for the individual certifications. See Gasketing and Edge-sealing Materials for Fire Doors, Positive-pressure Tested (GVV) for the Category G Edge Sealing Systems individual certifications.

**Category C Frames** — A fire door frame that plays an integral part in the door assembly in complying with the positive-pressure requirements. Threesided hollow metal frames are generally not required to be positive-pressure tested. See Fire Door and Window Frames (GTV) for a listing of those manufacturers that can provide steel frames.

**Category D Door/Frame Assemblies** — A door and frame assembly that is labeled as assembly. Category D door and frame assemblies are Listed under Special-purpose Fire Doors (GSX).

**Category F Light Kits** — Light kits that have been investigated for positive pressure. See Fire Door Class Light Frames (GVF) for the Listings of the positive-pressure glass light frames investigated to positive pressure.

**Category G Edge Sealing Systems** — Edge seals that are surface applied to doors or frames. These seals may or may not have an effect on meeting the leakage requirements of the smoke (“S”) rating. See Gasketing and Edge-sealing Materials for Fire Doors, Positive-pressure Tested (GVV) for the Category G Edge Sealing Systems individual certifications.

**Category H Smoke and Draft Control Gasketing** — See Gasketing and Edge-sealing Materials for Fire Doors, Positive-pressure Tested (GVV) for the Category H Smoke and Draft Control Gasketing for the individual certifications.

**Category J Gaskets** — Gasketing materials that are added to a door assembly for purposes other than Category G Edge Seals and Category H Smoke and Draft Control Gaskets. They are not used for weather stripping and for sound control. They meet the requirements for positive-pressure tests and can be used on these assemblies. These gasket materials do not contribute to the doors meeting the positive-pressure fire test. They are only investigated so that they do not contribute to flaming when tested to the positive-pressure-test requirements.

**RELATED PRODUCTS**

For information on fire doors, fire windows, and related frames, hardware, glazing and other individual components, see Fire Door Assemblies and Window Assemblies (GSN). For the protection of paper records against loss by fire, see Vault Doors, Class 350, Insulated (RZNR) and File Room Doors, Class 350, Insulated (RWWR).

**UL** — In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damage, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Nonpower-limited Fire Alarm Cable (HNHT)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER-LIMITED FIRE ALARM CABLE (HNIR) USE AND INSTALLATION**

This category covers power-limited fire alarm cable intended for use in power-limited circuits in accordance with Article 760 of ANSI/NFPA 70, "National Electrical Code" (NEC). Unless a higher temperature rating is marked on the cable, power-limited fire alarm cable is intended for use where operating temperature does not exceed 60°C. The voltage rating is 300 V but is not marked.

**PRODUCT MARKINGS**

Power-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

- **FPL** — Indicates cable intended for use within buildings in accordance with Section 760.154(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

- **FPLP** — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 760.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

- **FPLR** — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 760.154(B) of the NEC. The flame propagation height of this cable is less than 32 ft when tested per ANSI UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

- **Power-limited Fire Alarm Cable** — Indicates cable suitable for use within buildings (1) where the cable is enclosed in a raceway, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, in accordance with Sections 760.154(C)(2) and (3) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581. Certified Type FPLP cable that is additionally marked "Also Certified NYC CERT Fire Alarm Cable" has been investigated in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York.

- **Cable that complies with the requirements for “Limited Combustible” specified in ANSI/NFPA 90A, “Installation of Air Conditioning and Ventilating Systems,” is surface marked “Limited Combustible.”

- **Cable marked “direct burial,” “for direct burial” or “dir bur” has been investigated and found suitable for direct burial in the earth.**

- **Cable marked “sunlight resistant” or “sun res” may be exposed to the direct rays of the sun.**

- **Cable marked “CI (max voltage ___)” is suitable for use as circuit-integrity cable at the maximum voltage to ground indicated, in accordance with Section 760.154(D) of the NEC.**

- **Cable marked “CI (max voltage ___)” is intended for use in free air only.**

- **Cable marked “wet” or “wet location” is suitable for use in wet locations.**

- **Cable marked “30°C,” “40°C,” “50°C,” “60°C,” or “70°C” complies with a cold bend test conducted at that temperature.**

**PRODUCT IDENTIFICATION**

The following product identity applies on the product:

Power-limited Fire Alarm Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1424, "Cables for Power-Limited Fire-Alarm Circuits."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifiers, and a file number.

In addition, the Certification Mark for cable also certified for use in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York includes the statement "Also Certified for Use as Fire Alarm Cable in New York City."

The Certification Mark for this category requires the use of a holographic label.

**LUMINAIRES AND FITTINGS (HYXT) USE**

This category covers complete luminaires intended for general and special-purpose illumination, and component fittings and retrofits intended for field assembly or into complete luminaires.

**SPECIAL-USE LUMINAIRES**

Cooking Hood Luminaires — Luminaires intended for use in nonresidential occupancies in exhaust ducts or hoods above cooking equipment are marked "SUITABLE FOR USE IN NONRESIDENTIAL OCCUPANCIES." Luminaires intended for use in "SPECIAL COOKING HOODS" and "MOUNT A MINIMUM OF 1.2 M (4 FT) ABOVE COOKING HOODS." Such luminaires are for installation in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," and Section 410.10(C) of ANSI/NFPA 70, "National Electrical Code" (NEC).

Recessed cooking hood luminaires are additionally marked with a minimum spacing marking: "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___ INCHES." The recessed cooking hood is intended to be installed in a hood that maintains these minimum spacings.

Air-handling Luminaires — Luminaires suitable for air handling use are marked "SUITABLE FOR AIR HANDLING USE." For information on the use of air-handling luminaries in fire-rated ceiling constructions, reference should be made to the design information section under Fire Resistance Ratings (BXLV). For applicable requirements covering air-handling installations, reference should be made to ANSI/NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."

Some recessed air-handling luminaires are restricted to certain applications, and the use of certain luminaire types is marked as follows: "VENTILATING OR COOLING ONLY," "ONLY FOR USE IN CEILING PLENUM OF NONCOMBUSTIBLE CONSTRUCTION OR WITH AIR HANDLING PARTS THAT COVER VENT OPENINGS" or "INSTALL ONLY IN ENVIRONMENTAL AIR HANDLING SPACES WHERE A COMPLETE METAL ENCLOSED WIRING SYSTEM IS PROVIDED."

**LUMINAIRE INSTALLATION MARKINGS**

Unless otherwise indicated under the category for a specific type of luminaire, all luminaires are marked indicating the location where they can be used:

- Luminaires marked "DRY LOCATIONS ONLY" are intended to be installed in indoor dry locations.
- Luminaires marked "SUITABLE FOR DAMP LOCATIONS" are intended to be installed in damp or dry locations.
- Luminaires marked "SUITABLE FOR WET LOCATIONS" are intended to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary Locations (AALZ). In addition to the dry-, damp- or wet-location markings, a luminaire may be optionally investigated and marked for ingress protection in accordance with IEC 60529, “Degrees of Protection Provided by Enclosures (IP Code).” IP code markings are supplemental and not intended to replace dry-, damp- or wet-location markings.

Luminaires investigated for or restricted to a particular mounting location for suitability to wet locations are additionally marked "SUITABLE FOR MOUNTING WITHIN 1.2 M (4 FT) ABOVE HOOD," "SUITABLE FOR GROUND-MOUNTED RECESSED," "LIMIT RANGE OF ADJUSTMENT TO (instruction)" or "COVERED CEILING MOUNT ONLY."
LUMINAIRES AND FITTINGS, SPECIAL PURPOSE, MISCELLANEOUS (IETR)−Continued

GENERAL

This category covers retrofit devices or kits consisting of parts and/or sub-assemblies intended for field installation in certified luminaires, office furnishing luminaires or portable luminaires. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit. This category includes reflector kits, retrofit kits for office-furnishing luminaires or portable luminaires. These products have been investigated for or restricted to a particular mounting location and are additionally marked to include the maximum number, size and type of conductors they are intended to accommodate. See Lighting Products (IFAR).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).
For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

- **PRODUCT IDENTITY**
- **PRODUCT CATEGORIES BY CATEGORY CODE**

This category covers poles intended for use as remote ballast in combination with a remote ballast and are marked with their electrical ratings excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency. As an alternative to a marked volt-ampere rating, the luminaire line volt-amperes can be determined by the following markings: "FOR LINE VOLT-AMPERES MULTIPLY TOTAL LAMP WATTAGE BY 1.5" for luminaires with high power factor preheat or rapid start ballasts; "FOR LINE VOLT-AMPERÉS MULTIPLY TOTAL LAMP WATTAGE BY 2.5" for luminaires with low power factor preheat or rapid start ballasts; or "FOR LINE VOLT-AMPERES MULTIPLY ALL LAMPS IN INCHES BY..." for luminaires with instant start ballasts and where the blank corresponds to a multiplying factor based on supply voltage. Luminaires with a ballast output circuit voltage exceeding 1000 V are marked "NOT FOR USE IN DWELLING."
Fluorescent-lamp-type Luminaires (IEUT)—Continued

Luminaires intended to be field connected to a remote ballast are marked “USE BALLAST FOR ___ WATT ___ TYPE LAMP” and “USE THERMAL-MITY PROTECTED BALLAST FOR TYPE LAMPS.”

Luminaires are suitable for use with 60C field wiring unless (1) the field wiring is routed within 3 inches of the luminaire, in which case 90C rated wire is to be used, or (2) the luminaire is marked with a supply wire rating.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fluorescent Surface-mounted Luminaires (IEUZ)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, and pole-mounted luminaires. Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked “WALL MOUNT ONLY” are not acceptable for mounting on ceilings, and (2) luminaires marked “NON-COMBUSTIBLE SURFACE ONLY.”

Luminaires provided with a power-supply cord and not provided with hardware for suspension such as a chain, hook, or the like are marked “FOR CHAIN OR HOOK SUSPENSION ONLY.”

Luminaires intended for undercabinet mounting are marked “SUITE FOR UNDER-CABINET MOUNT.”

Luminaires intended for continuous-row mounting are marked “SUITE FOR CONTINUOUS ROW MOUNTING.”

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked “THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words “Fluorescent,” “Wired Fluorescent Channel” or “Wired Fluorescent Reflector” adjacent to the Certification Mark.

PRODUCT IDENTITY

The following product identity appears on the product:

Luminaire

ADDITIONAL INFORMATION

For additional information, see Fluorescent-lamp-type Luminaires (IEUT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AAAL).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1998, “Luminaires.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Luminaire.”

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fluorescent Recessed Luminaires (IEV)

GENERAL

This category covers luminaires intended for installation in recessed cavities in wall, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, “National Electrical Code” (NEC).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked “TYPE IC” may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity no closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “FOR USE IN Poured CONCRETE.”

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked “ SUITE FOR SUSPENDED CEILING.”

Luminaires provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.36(B) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “ SUITE FOR GROUND-MOUNTED RECESSED ONLY.”

LUMINAIRE INSTALLATION MARKINGS

A luminaire with an integral junction box or wiring compartment and investigated for any heat contribution added by branch-circuit conductors is marked “MAXIMUM OF ___ AWG BRANCH CIRCUIT CONDUCTORS SUITE ___ PERMITTED IN BOX.” A luminaire suitable for branch-circuit conductors, but not for pulling wires though conduit, is additionally marked “FOR CABLE USE ONLY — NOT FOR PULLING WIRES.”

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked “ACCESS ABOVE CEILING REQUIRED,” “ACCESS BEHIND WALL REQUIRED” or “ACCESS NONCOMBUSTIBLE WALL CEILING PLENUM ONLY.”

Luminaires provided with polymeric recessed housings are marked “FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY” and “FOR USE IN NON-FIRE-RATED INSTALLATIONS ONLY.”

Luminaires provided with recessed housings with openings that do not close off the room side to ceiling opening are marked “FOR USE IN NON-FIRE-RATED INSTALLATIONS ONLY.”

Luminaires that consist of 1) a luminaire housing and trims or 2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

1) For luminaire housing and trims, the housing is marked “USE WITH [manufacturer’s name] [catalog number] TRIMS” and each trim is marked with the manufacturer’s name and catalog number;

2) For rough-in and finishing sections, the rough-in section is marked “ROUGH-IN SECTION FOR USE WITH FINISHING SECTION ___,” where the blank refers to the type or catalog number. The finishing section is marked in the same manner stating “FINISHING SECTION FOR USE WITH ROUGH-IN SECTION ___.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words “Recessed Fluorescent Channel,” “Recessed Fluorescent Reflecting Channel,” “Wired Recessed Fluorescent Channel” or “Wired Fluorescent Recessed Section” adjacent to the Listing Mark.

PRODUCT IDENTITY

The following product identity appears on the product:

Light Diffusers and Lenses for Air-handling Luminaires, Fluorescent (IEWW)

GENERAL

This category covers light diffusers consisting of metal frames and panels of nonmetallic light-diffusing material, other than glass. They are for use on luminaires that are designed to handle return air in a heating or air-conditioning system. The method of mounting in the metal frame, the frame dimensions and the panel material used are so designed that the panel drops out of the frame under most fire conditions and, if the panel material ignites while in the frame, it will not propagate flame to adjacent light diffusers.

PRODUCT IDENTITY

The following product identity appears on the product:

Light Diffuser for Air-handling Luminaires

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp Type Luminaires (IEUT), Luminaires and Fittings (HYXI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Light Diffuser for Air Handling Luminaires.”

* * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

High-intensity-discharge-lamp-type Luminaires (IEWX)

GENERAL

This category covers high-intensity-discharge-lamp-type luminaires containing high-intensity-discharge lamps and may contain fluorescent and incandescent lamps.

LUMINAIRE INSTALLATION MARKINGS

All luminaires except those intended for use with a remote ballast are marked with their electrical ratings, excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency.

High-intensity-discharge Surface-mounted Luminaires (IXET)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling- and pole-mounted luminaires. Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked “SUITABLE FOR OPERATION IN AMBIENT NOT EXCEEDING __ °C,” where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked “WALL MOUNT ONLY” are not acceptable for mounting on ceilings, and (2) luminaires marked “NON-COMBUSTIBLE SURFACE ONLY” are luminaires provided with a power supply cord and not provided with hardware for suspension such as a chain, hook, or the like are marked “FOR CHAIN OR HOOK SUSPENSION ONLY.”

Luminaires intended for undercabinet mounting are marked “SUITABLE FOR UNDER-CABINET MOUNT.”

Luminaires intended for continuous-row mounting are marked “SUITABLE FOR CONTINUOUS ROW MOUNTING.”

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked “THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words “HD” or “Wired HID Section” adjacent to the Certification Mark.

PRODUCT IDENTITY

The following product identity appears on the product:

Luminaire

ADDITIONAL INFORMATION

For additional information, see High-intensity-discharge-lamp-type Luminaires (IEWX), Luminaires and Fittings (HYXI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**High-intensity-discharge Recessed Luminaires (IEXZ)**

**GENERAL**

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, “National Electrical Code” ( NEC). TYPES OF RECESSING LUMINAIRE

**TYPE IC LUMINAIRE** — Luminaires marked “TYPE IC” may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

**TYPE NON-IC LUMINAIRE** — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRE: ___INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___INCHES.”

The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire, and other structural support members may be in the cavity area above the luminaire, provided (1) they are not closer than 1/2 in. from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

**CONCRETE-ONLY LUMINAIRE** — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “FOR USE IN CONCRETE ONLY.”

A Type IC or non-IC luminaire that is sealed to prevent the entry of concrete may be installed in concrete providing it is marked “SUITABLE FOR USE IN POURED CONCRETE ONLY.”

**SUSPENDED-CEILING LUMINAIRE** — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked “SUITABLE FOR SUSPENDED CEILING.”

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbance has not been investigated.

**GROUND-MOUNTED RECESSED LUMINAIRE** — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “SUITABLE FOR GROUND-MOUNTED RECSESSED ONLY.”

A ground-mounted recessed luminaire that is suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked “SUITABLE FOR GROUND-MOUNTED RECESSED.”

**LUMINAIRE INSTALLATION INSTRUCTIONS**

All recessed luminaires, except those marked “FOR USE IN POURED CONCRETE ONLY,” are marked “BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING.”

Luminaires that produce temperatures in excess of 90°C at a distance of 0.5 in. from the luminaire may be installed in the same cavity. If one type is to be installed, the manufacturer’s name and catalog number must be marked.

Luminaires are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbance has not been investigated.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked “ACCESS ABOVE CEILING REQUIRED” or “ACCESS BEHIND WALL REQUIRED.”

Luminaires provided with polymeric recessed housings are marked “FOR USE IN ONE-AND TWO-FAMILY DWELLINGS ONLY” and “FOR USE IN NON-FIRE-RATED INSTALLATIONS.”

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

1. For luminaire housing and trims, the housing is marked “USE WITH [manufacturer's name] [catalog number] TRIMS” and each trim is marked with the manufacturer’s name and catalog number;
2. For rough-in and finishing sections, the rough-in section is marked “ROUGH-IN SECTION FOR USE WITH FINISHING SECTION,” where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label.

The finishing section is marked in the same manner stating “FINISHING SECTION FOR USE WITH ROUGH-IN SECTION.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

**PRODUCT MARKINGS**

All luminaires bear a model, catalog or series number (or similar designation) or the words “Recessed HID,” “Recessed HID Type IC,” “Rough-In Section for Recessed HID,” “Rough-In Section for Roughed-Hide Type IC,” “Finishing Section for Recessed HID” or “Wired Recessed HID Section” adjacent to the Certification Mark.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Luminaire

**ADDITIONAL INFORMATION**

For additional information, see High Intensity Discharge Lamp-type Luminaires (IEV) Luminaires and Fittings (HYX) and Electrical Equipment for Use in Ordinary Locations (AAL).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Luminaire.”

The Listing Mark for this category requires the use of a holographic label.

**UL in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, arising in connection with the use, interpretation of, or reliance upon this Guide Information.”

**INCANDESCENT-LAMP-TYPE LUMINAIRE (IEYV)**

**GENERAL**

This category covers surface and recessed lighting luminaires containing only incandescent lamps.

Luminaires provided with electrical loads other than lampholders directly connected to a 120 V, 2-wire branch circuit supply are marked with the total wattage rating for the luminaire, excluding any convenience receptacle provided.

Luminaires provided with medium- or mogul-base lampholders are investigated for use with Types A or PS lamps unless marked otherwise. Also, some luminaires are only suitable for use with specific lamp types and are so marked.

A luminaire intended for use with a tungsten-halogen lamp and that does not require an additional lamp containment barrier is marked “USE LAMP MARKED ‘SUITABLE FOR USE IN OPEN LUMINAIRE.”

Luminaires are not intended for use with infrared or grow lamps unless so marked.

**RELATED PRODUCTS**
Luminaires that contain fluorescent or high-intensity-discharge lamps in combination with incandescent lamps are covered under Fluorescent-lamp-type Luminaires (IEUY) and High-intensity-discharge-lamp-type Luminaires (IEUX), respectively.

Luminaires intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Low-voltage luminaires for Recreational Vehicle Use (IFDQ).

LED LUMINAIRES AND FITTINGS (HYXT)

225

acceptable for mounting on ceilings, and (2) luminaires marked “NON-INTO JUNCTION BOX.”

If the required rating of the field wiring supplying the luminaire requires the installer to push the supply conductors from the luminaire into the outlet box, the luminaire is marked “PUSH CONDUCTORS INTO JUNCTION BOX.”

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked “WALL MOUNT ONLY” are not acceptable for mounting on ceilings, and (2) luminaires marked “NON-COMBUSTIBLE SURFACE ONLY.”

Luminaires intended for undercabinet mounting are marked “SUITABLE FOR UNDER-CABINET MOUNT.”

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked “THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX.”

All luminaires bear a model, catalog or series number (or similar designation) or the word “Incandescent” adjacent to the Certification Mark.

The following product identity appears on the product:

Luminaire

ADDITIONAL INFORMATION

For additional information, see Incandescent-lamp-type Luminaires (IEUY) Luminaires and Fittings (HYXI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaries.” Products employing LED light sources are additionally investigated to ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier, a control number, and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Luminaire.”

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Incandescent Recessed Luminaires (IEZK)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, “National Electrical Code” (NEC).

SPECIAL-USE LUMINAIRES

Recessed-type luminaires suitable for optional use with infrared heating lamps are marked and rated for 250 W reflector-type lamps. Recessed units suitable only for use with one or more infrared heating lamps are covered under Air Heaters, Room, Fixed and Location-dedicated (KKWS).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked “TYPE IC” may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

INHERENTLY-PROTECTED LUMINAIRE — A recessed luminaire which does not exceed temperatures greater than 90°C on outside surfaces even when covered with insulation and mislamped or overlapped is identified by being marked “INHERENTLY PROTECTED.”

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or cavity) with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked “INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: __ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: __ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: __ INCHES.” The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire and other structural support members may be in the cavity area above the luminaire provided (1) they are not closer than 1/2 in. from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “FOR USE IN CONCRETE ONLY.” A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked “SUITABLE FOR USE IN Poured CONCRETE.”

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires except those marked for use in concrete only are suitable for use in suspended ceilings and may be marked “SUITABLE FOR SUSPENDED CEILING.”

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When marked in accordance with this marking they comply with 410-16(c) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “SUITABLE FOR GROUND-MOUNTED RECESS.”

LUMINAIRE INSTALLATION MARKINGS

This category covers recessed luminaires intended for installation in debris cavities, including, but not limited to, recessed luminaires intended for use in an incineration or cremation facilities. Such luminaires may be installed in the ceiling or floor, and may be suspended luminaires, in addition to outlet box-mounted luminaires.

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.” Products employing LED light sources are additionally investigated to ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier, a control number, and a file number.

The Certification Mark for this category requires the use of a holographic label.
Incandescent Recessed Luminaires, Convertible, Non-ic/ic (IFAH)−Continued

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, “National Electrical Code.” These products may be installed in either IC or non-IC applications. The same rough-in section or luminaire housing is used for both IC and non-IC applications. The choice of finishing section/trim and light source (lamp) determine whether the completed luminaire is suitable for Type IC installations or non-IC installations.

Details for making the proper choice of finishing section/trim and lamp are contained in the installation instructions packaged with the rough-in section/luminaire housing. All luminaires employ a thermal protective device to deactivate the lamp(s) in the event increased temperature conditions result where the installation instructions are not followed.

**TYPE IC INSTALLATIONS** — Refer to Incandescent Recessed Luminaires (IEZX) sections entitled “Type IC Luminaires.”

**TYPE NON-IC INSTALLATIONS** — Refer to Incandescent Recessed Luminaires (IEHZ) sections entitled “Type Non-IC Luminaires.”

**LUMINAIRE INSTALLATION MARKINGS**

The rough-in section or the luminaire housing of a convertible recessed luminaire is marked with the following two statements:

A. “BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING”
B. “DO NOT INSTALL INSULATION WITHIN 76 MM (3 IN.) OF ANY PART OF THE LUMINAIRE”

The marking in item B is on a peel-off label that is removed when the luminaire is installed in a Type IC Installation.

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

1. For luminaire housing and trims, the housing is marked “USE WITH [manufacturer’s name] [catalog number] TRIMS” and each trim is marked with the manufacturer’s name and catalog number.
2. For rough-in and finishing sections, the rough-in section is marked “ROUGH-IN SECTION FOR USE WITH FINISHING SECTION,” where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating “FINISHING SECTION FOR USE WITH ROUGH-IN SECTION.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

**PRODUCT MARKINGS**

All luminaires bear a model, catalog or series number (or similar designation) or the words “Recessed Incandescent,” “Recessed Incandescent Type IC,” “Rough-In Section for Recessed Incandescent,” “Rough-In Section for Recessed Incandescent Type IC” or “Finishing Section for Recessed Fixture” adjacent to the Certification Mark.

**PRODUCT MARKINGS**

All luminaires bear a model, catalog or series number (or similar designation) or the words “Recessed Incandescent Convertible Type Non-IC/IC” or “Recessed Incandescent Convertible Non-IC/IC Rough-In Section” adjacent to the Certification Mark.

**PRODUCT MARKINGS**

The following product identity appears on the product:

Luminaire

LIGHT-EMITTING-DIODE LUMINAIRES (IFAK)

GENERAL

This category covers surface- and recessed-lighting luminaires containing only light-emitting-diode (LED) light sources.

RELATED PRODUCTS

Luminaires that contain incandescent lamps in combination with an LED light source are covered under Incandescent Surface-mounted Luminaires (IFZR), Incandescent Recessed Luminaires (IEZX) and Incandescent Recessed Luminaires, Convertible, Non-IC/IC (IFAH).

Luminaires that contain fluorescent lamps in combination with an LED light source are covered under Fluorescent Surface-mounted Luminaires (IEUZ), Fluorescent Recessed Luminaires (IEVY) and Light Diffusers and Lenses for Air-handling Luminaires, Fluorescent (IEWR).

Luminaires that contain high-intensity discharge lamps in combination with an LED light source are covered under High-intensity-discharge Surface-mounted Luminaires (IEXI) and High-intensity-discharge Recessed Luminaires (IEXJ).

Luminaires with an LED light source intended to be connected to a non-integral power source rated 30 V ac (60 V dc) or less are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

Luminaires with an LED light source connected to a nonintegral power source rated 15 V ac (30 V dc) or less and intended to be part of a low-voltage landscape lighting system are covered under Landscape Lighting Systems, Low Voltage (IFDE).

Luminaires with an LED light source intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Low-voltage Luminaires for Recreational Vehicle Use (IFDQ).

Light-emitting-diode Surface-mounted Luminaires (IFAM)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, undercabinet- and pole-mounted luminaires.

Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet-box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked "SUITABLE FOR OPERA-

TION IN AMBIENT NOT EXCEEDING ___ C," where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

If the required rating of the field wiring supplying the luminaire maintains these minimum spacings.

Inherently-protected Luminaire

A recessed luminaire that does not exceed temperatures greater than 80°C on outside surfaces even when covered with insulation and overlapped or collapsed is identified by the marking "INHERENTLY PROTECTED."

Type Non-IC Luminaire

Recessed luminaires, except those identified as Type IC, for use in continuous row mounting are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the light source(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-

CENTER OF ADJACENT LUMINAIRES: __ INCHES; B) TOP OF LUMI-

NAIRE AND AN OVERHEAD BUILDING MEMBRANE OR LID: __ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: __ INCHES."

Light-emitting-diode Recessed Luminaires (IFAO)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code" (NEC).

RECESSED LUMINAIRES TYPES

Type IC Luminaire — Luminaires marked “TYPE IC” may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

Light-emitting-diode Surface-mounted Luminaires (IFAM)–Continued

and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

Concrete-only Luminaire — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “FOR USE IN CONCRETE ONLY.” A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked “SUMMARIZED FOR USE IN BURIED CONCRETE.”

Suspected-ceiling Luminaire — All recessed luminaires except those marked for use in concrete only are suitable for use in suspected ceilings and may be marked “SUMMARIZED FOR SUSPENDED CEILING.”

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

Ground-mounted Recessed Luminaire — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked “SUMMARIZED FOR GROUND-MOUNTED RECESSED ONLY.”

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked “SUMMARIZED FOR GROUND-MOUNTED RECESSED.”

LUMINAIRE INSTALLATION MARKINGS

All recessed luminaires, except those marked “SUMMARIZED FOR USE IN POURED CONCRETE ONLY,” are marked “BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING.”

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked “INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION.”

Only those luminaires with an integral junction box or wiring compartment marked “MAXIMUM OF NO. ___ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR C C PERMITTED IN BOX,” have been investigated for any heat contribution added by branch circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked “ACCESS ABOVE CEILING REQUIRED” or “ACCESS BEHIND WALL REQUIRED.”

Luminaires provided with polymeric recessed housings are marked “FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY” and “FOR USE IN NON-FIRE RATED INSTALLATIONS.”

Luminaires that consist of (1) a luminaire housing and trims, or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings.

(1) For luminaire housing and trims, the housing is marked “USE WITH [manufacturer’s name] [catalog number] TRIMS” and each trim is marked with the manufacturer’s name and catalog number.

(2) For rough-in and finishing sections, the rough-in section is marked “ROUGH-IN SECTION FOR USE WITH FINISHING SECTION,” where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label.

The finishing section is marked in the same manner stating “FINISHING SECTION FOR USE WITH ROUGH-IN SECTION.”

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number or similar designation.

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Luminaire

ADDITIONAL INFORMATION

For additional information, see Light-emitting-diode Luminaires (IFAK), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1598, “Luminaires,” and ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.
Light-emitting-diode Retrofit Luminaire Conversion Kits for Commercial Refrigerators and Freezers (IFAS)—Continued

This category does not cover luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the commercial refrigerator or freezer.

The retrofit kits consist of LED light sources, installation instructions, subassemblies, end-product luminaire marking labels, and assembly aids (where appropriate) to facilitate the replacement of the existing light source in complete commercial refrigerators and freezers. The retrofit installation may require modifications to the end product in accordance with the installation instructions provided with the retrofit kits.

The LED retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer’s instructions, they do not adversely affect the operation of the commercial refrigerator or freezer. A luminaire within the end product that is modified so it can no longer accept the original lamp has a label provided by the retrofit kit manufacturer affixed to the end product where visible during relamping that indicates the luminaire has been modified and can no longer operate the originally-intended lamp(s).

LUMINAIRE MARKINGS

LED retrofit luminaire conversion kits that permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the end product. This marking is visible during relamping and states, “This luminaire has been modified and can no longer operate the originally intended lamp,” and additionally identifies the replacement LED lamp type/model to be used, together with the manufacturer’s name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

RELATED PRODUCTS

LED retrofit kits intended for field installation in UL-certified luminaires or office-furnishing lights are covered under Light-emitting-diode Luminaires Retrofit Kits (IFAR).

Retrofit reflector kits intended for installation on fluorescent luminaires are covered under Luminaire Conversions, Retrofit (IEUQ).

Retrofit devices used to convert incandescent exit luminaires to fluorescent exit luminaires are covered under Exit Sign Conversion Kits (FWC). LED light sources intended to replace fluorescent lamps where it is not necessary to modify the luminaire are covered under Lamps, Self-Ballasted, Light-emitting-diode Type (OOL). Optional accessories intended for installation in commercial refrigerators and freezers are covered under Refrigeration Equipment Accessories (SERS).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

** LED RETROFIT LUMINAIRE CONVERSION FOR USE ONLY WITH +**

IN ACCORDANCE WITH THE INSTRUCTIONS PROVIDED WITH THIS RETROFIT KIT

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LIGHT-EMITTING-DIODE RETROFIT LUMINAIRE CONVERSION KITS FOR COMMERCIAL REFRIGERATORS AND FREEZERS (IFAS)

This category covers light-emitting-diode (LED) retrofit kits intended for field installation in certified commercial refrigerators and freezers.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL-PURPOSE LUMINAIREs (IFAT)

Canopy Luminaires (IFAW)

GENERAL

This category covers luminaires for installation in cavities in outdoor canopies and marquees, such as used over gas station pumping islands and similar locations, in accordance with Article 410 of ANSI/NFPA 70, “National Electrical Code.”

These luminaires are not intended for indoor use or in outdoor installations where thermal insulation would be installed.

PRODUCT MARKINGS

Canopy luminaires are marked “CANOPY LUMINAIRE – NOT THERMALLY PROTECTED.”

All luminaires are suitable for wet locations and may be subjected to water and precipitation from the back side unless marked “FOR COVERED CEILING MOUNT ONLY.”

A recessed canopy luminaire is intended to be installed not closer than 1/2 inch from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 inch from adjacent luminaires. A recessed canopy luminaire marked “OPEN CEILING MOUNT ONLY” is intended for an uncovered ceiling only.

All luminaires bear a model, catalog or series number (or similar designation) or the words “Incandescent Canopy,” “Fluorescent Canopy” or “HID Canopy,” or other appropriate product type adjacent to the Certification Mark.

PRODUCT IDENTITY

The following product identity appears on the product:

Luminaire

RELATED PRODUCTS

Luminaires intended for recessed indoor use, or areas where thermal insulation could be installed, are covered under Fluorescent Recessed Luminaires (IEV), High Intensity Discharge Recessed Luminaires (IEZ) and Incandescent Recessed Luminaires (IEEE).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.”

Products employing LED light sources are additionally investigated to ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Luminaire.”

Electric-discharge Lighting Systems, Cold Cathode (IFAY)

USE

This category covers lighting systems that incorporate electric-discharge tubing with ferrule-type end caps, commonly referred to as cold cathode lighting, which is electrically connected to the output of a transformer, power supply or ballast by ferrule-type lampholders. Each transformer or power supply in the system is not rated more than 120 mA operating current (150 mA rated output current) when the open-circuit voltage is over 7500 V, and not more than 240 mA operating current (300 mA rated output current) when the open-circuit voltage is 7500 V or less. These systems are intended to be installed in accordance with Article 410 of ANSI/NFPA 70, “National Electrical Code” (NEC).

These lighting systems may incorporate transformers, power supplies or ballasts that have a marked output voltage greater than 1000 V. Such systems are not intended for use in dwellings in accordance with Article 410 of the NEC.

These lighting systems provide general illumination in accordance with Article 410 of the NEC.

INSTALLATION

Electric-discharge lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions which define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The certification of a lighting system does not constitute approval of the design which is the responsibility of the manufacturer and the Authority Having Jurisdiction not approval of the installation. The final acceptance of the field-installed lighting system is the responsibility of the Authority Having Jurisdiction.

PRODUCT MARKINGS

These lighting systems may incorporate ballasts that have marked output voltages 1000 V or less and are intended for use in dwellings and other premises when provided with circuit interrupting lampholders that de-energize the circuit during lamp replacement, unless they are marked “Not for Dwelling Use.”

These systems are intended for permanent installation in indoor, dry locations unless marked “Suitable for Damp Locations” or “Suitable for Wet Locations.”

PRODUCT IDENTITY

The following product identity appears on the product:

Field-installed Electric-discharge Lighting System Part

RELATED PRODUCTS

This category does not cover neon tubing for display windows, outline lighting or signs which are covered under Signs (UXY).

This category does not cover field-assembled neon systems in display windows, outline lighting, or skeletal neon signs which are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under Signs (UXY).

Lighting systems operating at 1000 V or less are covered under Fluorescent Luminaires (IEUZ), High-intensity-discharge Surface-mounted Luminaires (IEZ) and Incandescent Luminaires (IEEE).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 48, “Electric Signs.”

UL MARK

The Certification Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining lighting system parts are packaged, or on the remaining lighting system parts themselves, referencing a specific field-installed System Number is the only method provided by UL to identify that these lighting systems are covered under its Certification.
Electric-discharge Lighting Systems, Cold Cathode (IFAY)—Continued

and Follow-Up Service. The Certification Mark for these systems includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

THE CERTIFICATION OF THIS LIGHTING SYSTEM IS CONTINGENT UPON INSTALLATION ACCORDING TO THE SPECIFICATIONS OF [LISTEE’S NAME], SYSTEM NO., AND THE NATIONAL ELECTRICAL CODE

Alternate UL Mark

The Listing Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining lighting system parts are packaged, or on the remaining lighting system parts themselves, referencing a specific field-installed System Number, is the only method provided by UL to identify these lighting systems covered under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” an issue number, “Field-Installed Electric Discharge Lighting System Part,” and the words “The Listing of this lighting system category is contingent upon installation according to the specifications of Listee’s Name,” System No., and the National Electrical Code.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Landscape Lighting Systems, Low Voltage (IFDH)

USE

This category covers low-voltage landscape lighting systems and individual components. A lighting system consists of a power unit, a number of luminaires (lighting units), connectors, and the interconnecting cable for the low-voltage circuit. The individual components include certified power units, luminaires (lighting units), and all other items needed to install a complete system in accordance with product ratings, instructions and markings.

Recessed luminaires (lighting units) intended for installation in a building wall or similar application are provided with a means to connect conduit and may be installed such that insulation is (and other combustible materials are) in contact with the luminaire (lighting unit) unless marked for installation in or on noncombustible surfaces only.

Certified components from the same company or from different companies may be used to form a complete lighting system as long as the components are used in accordance with the product ratings, markings and instructions.

The low-voltage wire or cable extending from the power-unit output circuit to, and between, the individual luminaires (lighting units) and fittings is intended to be certified SPT-3, SPT-2W, underground low-energy circuit cable, or other wire or cable rated as sunlight resistant, suitable for wet locations, and intended for direct burial.

RATING

Each power-unit output circuit is rated 15 V rms ac (24.2 V peak) or 30 V dc, or less; 25 A or less; and 300 VA or less. The total load connected to each output circuit of the power unit, determined by adding the wattages of the individual luminaires (lighting units), should not exceed the marked maximum permitted total lamp wattage. Two or more output circuits from the same or different power units should not be connected in parallel or series.

PRODUCT MARKINGS

Power units are marked “Indoor Use Only,” “Outdoor Use Only” or “Indoor/Outdoor Use,” and are intended to be installed in accordance with the power-unit markings and instructions. If located outdoors, power units are intended to be connected to a receptacle outlet with a cover assembly marked suitable for wet locations while in use. A power unit marked “Suitable for Ground Installation” is suitable for installation at or below grade level.

Luminaires (lighting units) are suitable for use outdoors or in certain indoor applications, such as atriums or shopping malls, unless marked “Outdoor Use Only.” Luminaires intended only for recessed mounting in the ground or in poured concrete are marked “For installation in the ground only” or “For installation in poured concrete only,” respectively.

Power units marked “For Use with Submersible Fixtures or Submersible Pumps” are intended to energize low-voltage submersible fixtures and pumps identified for use in fountains, in accordance with Article 680, Part V of the NEC, or in ponds not intended for swimming or wading in accordance with Article 682 of the NEC.

The output of power units that are limited to Class 2 levels are permitted to be marked “Class 2.” Luminaires intended for use only with a Class 2 power unit are marked “Class 2 only.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

Landscape Fitting
Landscape Lighting Unit
Landscape Luminaire
Landscape Power Unit

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1838, “Low Voltage Landscape Lighting Systems.”

Products employing LED light sources are additionally investigated to ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the word “Landscape” followed by the product name “Power Unit,” “Lighting Unit,” “Luminaire” or “Fitting,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Luminaires, Luminaire Assemblies and Luminaire Enclosures Certified for Fire Resistance (IFDL)

USE

This category covers luminaires, luminaire assemblies and luminaire enclosures investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings — ANSI/UL 263 (BXUV). The luminaires, assemblies and enclosures (in conjunction with a luminaire) are intended for recessed installation in ceilings in accordance with ANSI/NFPA 70 (2005), “National Electrical Code.” They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

The luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Luminaire Certified for Fire Resistance
Luminaire Assembly Certified for Fire Resistance
Luminaire Enclosure Certified for Fire Resistance

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate luminaires and luminaire assemblies in this category are ANSI/UL 263, “Fire Tests of Building Construction and Materials,” and ANSI/UL 1598, “Luminaires.”

The basic standard used to investigate luminaire enclosures in this category is ANSI/UL 263.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

* * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)—USE**

This category covers low-voltage lighting systems, together with the principal components that make up such systems: low-voltage luminaires, power units, fittings, controls and subassemblies intended for use with these systems.

These luminaires, fittings, controls and subassemblies are rated no more than 30 V ac or 60 V dc. Power units have isolation between primary and secondary, total output no more than 25 A, and each output limited to no more than 30 V ac or 60 V dc.

This category also covers low-voltage bare conductor lighting systems incorporating luminaires which may be repositionable along the bare supply conductors that also mechanically support the luminaire. The power unit for these systems is provided with integral protection that de-energizes the output upon overloading or inadvertent shorting of exposed uninsulated live parts of the system.

This category also covers low-voltage linear track conductor-type lighting systems with remote low-voltage power supplies. Also included are low-voltage “mono-point,” “dual-point” and “multi-point” low-voltage track-type systems with removable luminaires, where the power supply may be remote or may be in a canopy integral with the track.

All lighting systems and components covered under this category may also incorporate wireless capability for control purposes.

**INSTALLATION INSTRUCTIONS**

The products covered under this category are intended for installation in accordance with Article 411 of ANSI/NFPA 70, “National Electrical Code” (NEC). Installation instructions accompanying the product describe the wiring method intended to be used to supply the luminaires and power units.

Certain lighting systems are designed and investigated for the luminaire to be supplied and supported by an exposed conductor, cord, rail or track. The wiring method intended for all other luminaires is in accordance with Chapter 3 wiring methods of the NEC, or when the circuit is supplied by a Class 2 power unit, in accordance with Article 725 of the NEC (including FPE and power-over-ethernet).

Power units intended to supply Class 2 luminaire circuits or an exposed conductor, cord, rail or track that supports the luminaires are intended to be connected to the branch circuit either with a factory-connected power-supply cord or by fixed wiring. These power units are intended to be connected to the output circuit by (a) wiring means consistent with that involved with the supplied luminaire, or (b) fixed wiring. All other power units are designed for connection to the branch circuit and the output circuit with a fixed wiring means.

Luminaires intended for recessed or undershelf installation into a cabinet are provided with installation instructions depicting the intended use.

Some lighting systems include track or rail types of sections that (a) support and provide power to low-voltage luminaires, and (b) are intended to be bent by the installer as needed for the installation. Care should be taken to bend these system parts following the method identified in the installation instructions and so that no part damage occurs. The radii of bends should be no less than specified by the manufacturer.

**PRODUCT MARKINGS**

Luminaires and fittings restricted for connection to a Class 2 source of supply are identified by product markings.

These luminaires and fittings are intended for surface mounting, suspended or recessed installation and are marked for either dry, damp or wet locations. A luminaire or fitting marked for wet locations is rated no more than 15 V ac or 30 V dc unless live parts are made inaccessible to contact during normal use. See Luminaires and Fittings (HYXT) for additional installation markings.

Low-voltage luminaires that have been investigated for use within the storage area of a clothes closet are so identified on their installation instructions.
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)—Continued

Recessed units (luminaires and power units) marked “Type IC” or “Inherently Protected” may be installed in accordance with Section 410.66 of the NEC, such that insulation and other combustible materials are in contact with and over the top of the unit. All recessed units not marked “Type IC” or “Inherently Protected” are intended to be installed such that insulation is not placed over the top or within 3 inches of the sides of the unit, and other combustible materials are spaced, except at the points of support, at least 1/2 inch from the unit.

Power units shipped separately from the bare conductor lighting system are marked to identify the associated bare conductor system series number within 3 inches of the sides of the unit, and other combustible materials contact with and over the top of the unit.

“Inherently Protected” may be installed in accordance with Section 410.66 of the NEC, such that insulation and other combustible materials are in contact with and over the top of the unit.

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Low-voltage landscape lighting systems consisting of a remote power supply source, flexible cord, interconnecting means and relocatable outdoor door use lighting accessories are covered under Landscape Lighting Systems, Low Voltage (IFDE).

Low-voltage luminaires intended for connection only to 24 V or less source of supply in recreational vehicles are covered under Low-voltage Luminaires for Recreational Vehicle Use (IFDQ).

Low-voltage flexible lighting products are covered under Flexible Lighting Products (ILG).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, “Luminaires.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Medical Examining Room Light” or “Eye Chart,” or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ)

This category covers stage and studio luminaires, accessories and connector strips rated 600 V or less, for use in theaters, studios and similar locations in accordance with Articles 520 and 530 of ANSI/NFPA 70, “National Electrical Code.” Connector strips are defined as a wireway mounted on rigging or to the building structure above or adjacent to the luminaries it supplies. Stage and studio luminaires, accessories and connector strips are not intended for residential use.

LUMINAIRE INSTALLATION MARKINGS

Stage and studio luminaires, accessories and connector strips are marked “Not For Residential Use.”

Some stage luminaires are marked with a lamp replacement marking stating “CAUTION — Risk of Fire – Use With Max ____ Watt Lamp” where the space is filled in with a number specifying the maximum wattage.

Stage luminaires intended for use with a pressurized tungsten-halogen lamp with an integral outer envelope and not requiring a separate containment enclosure are marked “WARNING — Risk of fire,” and either “Use only lamp type _____” or “Use double envelope tungsten-halogen lamp that is marked on the lamp or carton as suitable for use without an additional shield.”

Stage luminaires using high-pressure lamps may be marked with one or more of the following:

“WARNING — Risk of possible lamp explosion. Service and maintenance should be performed only by qualified personnel as determined by the high-pressure luminaire manufacturer. Protective cloth-

Medical/dental Luminaires (IFDT)—Continued

patient or an attendant who can touch the patient. Patient vicinity includes areas in which patients are normally cared for, and is the space with surfaces likely to be contacted by the
Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ)–Continued

...ing and procedures as outlined in the manufacturer’s manual must be followed.”

“WARNING — Risk of possible lamp explosion. Allow lamp system to remain unenergized and to cool for minimum __ minutes before opening lamp access door.”

“CAUTION — Use only high-pressure lamp of proper size and type in this lamp system.”

“CAUTION — Serious injury may result from the generation of ozone by this lamp system. A proper means of venting must be provided.”

Some stage luminaires are intended to be mounted within a restricted range of mounting or adjustment means and are marked “WARNING — Risk of fire and electric shock,” followed by a description of the mounting or adjustment restrictions.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Connector Strip
- Stage Border Lighting Unit
- Stage Lighting Unit
- Stage Luminaire
- Stage Luminaire Accessory

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Stage and studio luminaires and accessories employing or associated with light-emitting-diode (LED) illumination are covered under Light-emitting-diode Stage and Studio Luminaires and Accessories (IFEC).

ADDITIONAL INFORMATION

For additional information, see Special-purpose Luminaires (IFAT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1573, “Stage and Studio Luminaires and Connector Strips.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol, the words “LISTED,” a control number, and one of the following product names as appropriate:

- “Light-emitting-diode Stage Luminaire” (or “LED Stage Luminaire”)  
- “Light-emitting-diode Stage Border Luminaire” (or “LED Stage Border Luminaire”)  
- “Stage Border Luminaire Accessory”  
- Other product identities may be used as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Low-voltage-luminaire Conversion Kits (IFES)

This category covers retrofit kits intended for field installation in certified luminaires to provide conversion to a low-voltage lighting system.

This category does not cover luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the luminaire.

The retrofit kits may consist of light sources, electronic subassemblies (ballasts, LED drivers, or controllers), luminaire components, installation instructions and marking labels, and assembly aids (where appropriate) to facilitate the conversion. Modifications may include provisions for connection of one or more luminaires to an isolating-type power unit with outputs rated within the Class 2 voltage limits of ANSI/NFPA 70, “National Electrical Code” (NEC). The power unit is not necessarily supplied with the retrofit kit.

The retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer’s instructions, the retrofit luminaires fully comply with the applicable requirements (see REQUIREMENTS below). A kit that modifies a luminarie so it can no longer accept the original lamp includes a label to be affixed to the luminaire, where visible during relamping, that indicates the luminaire has been modified and can no longer operate the originally intended lamp(s).

INSTALLATION INSTRUCTIONS

Installation instructions accompanying the product describe the wiring method intended to be used to supply the luminaires and power units in accordance with Article 411 of the NEC.

Some retrofit kits are intended to adapt the luminaire to be used with a certified suspended-ceiling-grid low-voltage lighting system. The applicable lighting system is identified on certain parts of these kits and in the installa-

Control No. + PERMANENTLY CONNECTED LUMINAIRES, FLUORESCENT LUMINAIRES, INCANDESCENT LUMINAIRES, HID LUMINAIRES, OFFICE-FURNISHING LIGHTS and/or PORTABLE LUMINAIRES, or indicate the specific luminaire model(s) and luminaire manufacturer(s) or

**RETROFIT LOW-VOLTAGE-LUMINAIRE CONVERSION FOR USE ONLY WITH PRODUCTS DESCRIBED AND INSTALLED IN ACCORDANCE WITH THE INSTRUCTIONS PROVIDED WITH THIS RETROFIT KIT**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**Submersible Luminaires (IFEV)**

This category covers submersible luminaires intended for installation in accordance with Article 680 (NFPA 70) “National Electrical Code,” in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons. For certifications of luminaires intended for use in swimming pools, spas, hot tubs and other vessels intended to accommodate persons, see Luminaires and Forming Shells (WBDT).

This category also covers submersible junction boxes intended for use with submersible luminaires and other submersible fountain equipment.

Luminaires investigated for operation only while submersed in water are marked "Submers Before Lighting," or with equivalent wording, and such marking is visible after installation of the luminaire.

Submersible luminaires have been investigated for both outdoor and indoor use.

**Dry-niche Submersible Luminaire** — These luminaires are intended for permanent installation only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are designed for servicing from the rear in a passageway behind the fountain wall or, if mounted in the bottom of the fountain, in a tunnel underneath the fountain. For purposes of installation, maintenance or servicing, the luminaire may consist of two separable parts. One part includes a factory-installed length of flexible cord terminating in an attachment plug, and the second part includes a receptacle for the attachment plug and a splice compartment in which the branch-circuit conductors are connected.

**Wet-niche Submersible Luminaire** — These luminaires are intended to be installed only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are intended for installation in a permanently installed luminaire housing (forming shell) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper housings with which they are to be used. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft. The flexible cord is confined in the luminaire housing by the luminaire and permits the luminaire to be removed from the luminaire housing and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is located that a 12-ft-long cord will not permit luminaire removal from the luminaire housing and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than shortened in the luminaire housing.

**Forming Shell (Housing) for Wet-niche Submersible Luminaires** — These are structures designed to support a mating wet-niche luminaire, for mounting in a fountain structure. Forming shells are marked to indicate the luminaires for which they have been investigated.

**No-niche Submersible Luminaire** — These luminaires are intended to be installed only on the walls of a fountain unless accompanying installation instructions describe the additional option of installation on the bottom of the fountain. These luminaires are mounted to a bracket permanently secured in or on the wall or bottom with the luminaire completely surrounded by water, and are marked to indicate the mounting brackets for which they have been investigated for use. These luminaires are pro-

Supplemental Requirements for Luminaire Reflector Kits for Installation on Previously Installed Fluorescent Luminaires."

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identification number provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**LUMINAIRE MARKINGS**

Retrofit luminaire conversion kits that replace the original lamp and still permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the retrofitted luminaire. This marking is visible during relamping and states, “This luminaire has been modified and can no longer operate the originally intended lamp,” and additionally identifies the replacement lamp type/model to be used, together with the manufacturer's name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

Retrofit reflector kits intended for installation on fluorescent luminaires are covered under Luminaria Conversions, Retrofit (IEUQ).

Retrofit kits used to convert luminaires to LED illumination systems in accordance with ANSI/UL 1998, “Luminaires,” and that are provided with integral LED power supplies or power modules are covered under Light-emitting-diode Luminaire Retrofit Kits (IFAR).

Retrofit devices used to convert light sources from one type to another in exit luminaires such as converting incandescent to LED are covered under Exit Sign Conversion Kits (FWC).

LED light sources intended to replace fluorescent lamps where it is not necessary to modify the luminaire are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV).

Retrofit kits may include parts to adapt luminaires for use with a suspended-ceiling-grid low-voltage lighting system. These parts and the resulting converted luminaire are additionally investigated under Suspended-ceiling-grid Low-Voltage Lighting Systems (IFSC).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 2108, “Low Voltage Lighting Systems,” and ANSI/UL 1998, “Supplemental Requirements for Luminaire Reflector Kits for Installation on Previously Installed Fluorescent Luminaires.”

UL NO.

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**RETROFIT LOW-VOLTAGE-LUMINAIRE CONVERSION FOR USE ONLY WITH + IN ACCORDANCE WITH THE INSTRUCTIONS PROVIDED WITH THIS RETROFIT KIT**

+ PERMANENTLY CONNECTED LUMINAIRES, FLUORESCENT LUMINAIRES, INCANDESCENT LUMINAIRES, HID LUMINAIRES, OFFICE-FURNISHING LIGHTS and/or PORTABLE LUMINAIRES; or indicate the specific luminaire model(s) and luminaire manufacturer(s)

**RETROFIT LOW-VOLTAGE-LUMINAIRE CONVERSION FOR USE ONLY WITH PRODUCTS DESCRIBED AND INSTALLED IN ACCORDANCE WITH THE INSTRUCTIONS PROVIDED WITH THIS RETROFIT KIT**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:
Submersible Luminaires (IFEV)—Continued

vided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft that is confined by the luminaire and fountain wall or bottom. The flexible cord permits the luminaire to be removed from the mounting bracket and to be lifted to the fountain deck for servicing without lifting the water feature. Using the water feature to access the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12-ft-long cord will not permit luminaire removal from the mounting bracket and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored between the luminaire and fountain wall.

Mounting Brackets for No-niche Submersible Luminaires—These are structures designed to support a mating no-niche luminaire, for mounting in or on a fountain structure. Mounting brackets are marked to indicate the luminaires with which they have been investigated for use.

Special-use Submersible Luminaire—These luminaires are intended to rest directly on the fountain floor or may be otherwise located in the fountain. The luminaires are provided with a permanently attached exposed flexible cord intended to be routed into a submersible junction box, or the luminaires have other means for permanent connection to the supply circuit.

ACCESSORIES

This category also covers accessory devices and kits intended to be field installed for the purpose of modernizing a luminaire, such as to convert the luminaire from incandescent to LED technology. These accessories include instructions that identify the specific luminaire(s) for which the accessory is intended and that do not require special knowledge or skills beyond that normally required for maintenance activities, such as lamp replacement. After installation of a certified accessory, the installed luminaire is expected to comply with the same requirements and perform in a comparable manner as a new luminaire, relative to safety risks.

REBUILT PRODUCTS

This category also covers submersible luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible luminaires are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible luminaires are subject to the same requirements as new submersible luminaires.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Dry-niche Submersible Luminaire
- Housing for Wet-niche Luminaire
- Mounting Bracket for No-niche Luminaire
- Special-use Submersible Luminaire
- Wet-niche Submersible Luminaire
- Submersible Junction Box
- Submersible Luminaire Accessory
- Submersible Luminaire Accessory, Housing for Wet-niche Luminaire
- Submersible Luminaire, Dry-niche Type
- Submersible Luminaires, No-niche Type
- Submersible Luminaires, Dry-niche Type
- Submersible Luminaires, Wet-niche Type
- Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt” precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, “Luminaires and Submersible Junction Boxes.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products is distinctive in form (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Mounting Bracket for No-niche Luminaire,” “Housing for Wet-niche Luminaire,” “Wet-niche Submersible Luminaire,” “Dry-niche Submersible Luminaire,” “No-niche Submersible Luminaire,” “Special-use Submersible Luminaire,” “Submersible Junction Box,” “Submersible Luminaire Accessory,” or other appropriate product name as shown in the individual Listings. Alternatively, the luminaires may be designated “Submersible Luminaire, (Wet-) (Dry-) (No-) Niche Type,” as appropriate.

For rebuilt products, the word “Rebuilt” precedes the product name.

Submersible Luminaires (IFEV)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Suspended-ceiling-grid Low-voltage Systems (IFFA)

USE

This category covers low-voltage systems intended for permanent installation and use in a suspended-ceiling grid in accordance with Article 411 of ANSI/NFPA 70, “National Electrical Code” (NEC).

These systems are intended to be installed in a suspended-ceiling grid that provides mechanical support for the ceiling tiles and provides electrical connections between the low-voltage power supply and low-voltage luminaires or other accessories.

These systems consist of the following system components:

1. An isolating-type low-voltage power supply operating at 30 V (42.4 V peak) or less and not exceeding Class 2 power limits.
2. A grid-rail power distribution system with uninsulated busbar conductors, similar to track lighting, to provide power from the Class 2 power supply to one or more Class 2 powered luminaires.
3. Class 2 powered luminaires or other accessories that may be recessed into the suspended ceiling, surface mounted on the room side of the ceiling, or located below the suspended ceiling.

These systems are intended for indoor dry locations and commercial use only and may be used in air-handling spaces when identified for such use. The system components also include interconnecting cables and connectors unless the connectors are suitable for field wiring.

Suspended-ceiling-grid low-voltage systems are not intended for use in:

1. Hazardous (classified) locations as specified in NEC Articles 500 – 517.
2. General patient-care areas or critical patient-care areas as defined by NEC Article 517.
3. Emergency systems as defined by NEC Article 700.

Suspended-ceiling-grid low-voltage systems are not intended for contact with thermal insulation as specified in NEC Article 410.

Suspended-ceiling-grid uninsulated busbar conductors are not intended for field cutting unless identified for such use.

INSTALLATION INSTRUCTIONS

These products are intended for installation in accordance with Article 411 of the NEC. Installation instructions accompanying the product describe the Class 2 wiring method intended to be used between the Class 2 power supply, the low-voltage grid-rail power distribution system, and the low-voltage luminaires or accessories in accordance with Articles 411 and 725 of the NEC. The Class 2 power supply is intended for permanent installation in accordance with the wiring methods in Chapter 3 of the NEC.

All electrical connections are intended for installation by qualified electrical installers.

The mechanical components of the system, including support of the grid rails, are intended to be in accordance with the “International Building Code” and the “International Mechanical Code.”

Each smallest unit package or carton is provided with installation instructions that contain a) a product description, b) a statement to identify the suspended-ceiling low-voltage system, c) a description of the part(s) intended to be used, and d) instructions describing how the part(s) are intended to be installed.

Each unit package or carton of suspended-ceiling low-voltage system grid-rail bus section is provided with installation instructions that identify the system series number or model name and model or catalog number of the system. The installation instructions also specify the electrical ratings of the system and identify the method of mounting.

PRODUCT MARKINGS

All suspended-ceiling-grid low-voltage system components are marked with:

1. Listee’s name, trade name, trademark or other descriptive marking by which the manufacturer responsible for the product may be identified.
2. The number of each distinctive category (as illustrated in this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Mounting Bracket for No-niche Luminaire,” “Housing for Wet-niche Luminaire,” “Wet-niche Submersible Luminaire,” “Dry-niche Submersible Luminaire,” “No-niche Submersible Luminaire,” “Special-use Submersible Luminaire,” “Submersible Junction Box,” “Submersible Luminaire Accessory,” or other appropriate product name as shown in the individual Listings. Alternatively, the luminaires may be designated “Submersible Luminaire, (Wet-) (Dry-) (No-) Niche Type,” as appropriate.

For rebuilt products, the word “Rebuilt” precedes the product name.

LOOK FOR THE UL MARK ON PRODUCT
Suspended-ceiling-grid Low-voltage Systems (IFFA) – Continued

Class 2 Luminaires — In addition to the required markings specified above for all components, each luminaire is marked with the specific suspended-ceiling-grid low-voltage system for which it is intended to be used.

Class 2 Power Supplies — In addition to the required markings specified above for all components, each power supply is marked with the specific suspended-ceiling-grid low-voltage system for which it is intended to be used.

Connectors — In addition to the required markings specified above for all components, the connectors are marked with:
1. The connector type (e.g., ceiling-grid load connector, in-plane load connector, power-feed connector) and a distinctive catalog number or the equivalent.
2. Electrical rating in volts and amperes (watts or VA is optional).
3. For a direct-current (dc) system, the polarity of the specific conductor opening for a power-feed connector: “Positive,” “P+:” “P-:” or “+,” “Negative,” “N-” or “-.”

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Grid Bus Rail
- Low-voltage Suspended-ceiling Luminaire
- Low-voltage Suspended-ceiling Power Supply
- Low-voltage Suspended-ceiling Recessed Luminaire

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
See Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

ADDITIONAL INFORMATION
For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 2577, “Suspended Ceiling Grid Low Voltage Systems and Equipment.”

For information on product markings, installation instructions and other requirements, see Suspended-ceiling-grid Low-voltage Systems (IFFA).

PRODUCT CATEGORIES BY CATEGORY CODE

UL Mark

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Grid Bus Rail,” “Low-voltage Suspended-ceiling Power Supply,” “Low-voltage Suspended-ceiling Luminaire,” “Low-voltage Suspended-ceiling Recessed Luminaire,” or other appropriate product name as shown in the individual Listings.

For use with Suspended-ceiling-grid Low-voltage System Accessories (IFFC)

This category covers suspended-ceiling low-voltage system accessories that are parts and/or subassemblies intended for field installation in specific suspended-ceiling-grid low-voltage systems. They include low-voltage Class 2 power supplies, power and load connector assemblies, low-voltage luminaires, and other accessories intended for installation in a specific suspended-ceiling-grid low-voltage system of another manufacturer in accordance with the accessory unit manufacturer’s instructions.

These accessories have been investigated to determine that, when installed and used in accordance with the manufacturer’s instructions, they do not adversely affect the operation of the complete suspended-ceiling-grid low-voltage system.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Class 2 Power Supply
- Low-voltage Luminaire

Other product identities may be used as shown in the individual certifications.

any loss, expense or damages, including incidental or consequential dam-
ages, arising out of or in connection with the use, interpretation of, or reli-
ance upon this Guide Information.

Track Lights and Tracks (IFFR)

This category covers track-lighting systems for installation on or recessed
into ceilings and walls and intended to be connected to a source of supply
by a fixed wiring method only in accordance with Article 410, Part R of
ANSI/NFPA 70, “National Electrical Code.”

These track-lighting systems are intended for installation in dry locations
only.

Track-lighting systems consist of the following parts, each bearing a Certi-
Fication Mark: 1) track sections, 2) connectors to connect track sections
together and/or track sections to the supply, 3) end caps that insert into the
last track sections in a run, 4) lighting assemblies, 5) electrical accessory
parts, such as low-voltage adapters, and 6) accessory parts, such as mount-
ing hardware, track section hooks and fixture assembly light deflectors.

The following components are not part of the certificated track-lighting sys-
tem and are not acceptable for use with a certified track-lighting system: 1) recep-
tacle adapters that when inserted into a track section will accommo-
date attachment-plug-connected products and 2) power-supply-cord connec-
tors that when inserted into the end of a track section enables the track sys-
tem to serve as a power-supply cord connected to its source of supply.

INSTALLATION INSTRUCTIONS

Each smallest unit package or carton is provided with installation instruc-
tions that contain a) a product description, b) a statement to identify the
track system, c) description of the part or parts intended to be used with
and d) instructions describing how the part or parts are to be installed to
the system.

Each track section is provided with installation instructions that identify
the track system series number or model name and catalog number
of the track. The installation instructions also specify the electrical rat-
ings of the track system and identify the intended type of mounting (pen-
dant or surface) and distance between mounting clips, screws and stems.

Additional instructions and limitations of use for track-lighting systems
are specified in the Important Safety Instructions provided with each track
section.

Those track systems with track sections that may be cut to length in the
field by the installer are provided with installation instructions that indicate
the proper method of cutting.

Those track systems intended to have the mounting holes in each track
section drilled by the installer are provided with a drill guide in the center
of each track section and include in the accompanying installation instruc-
tions the proper location of the mounting holes.

INSTALLATION MARKING

Track systems that are designed only for use with mounting clips are
identified by marking each track section “For Clip Mounting Only.”

Track systems that are intended only for nonpendant mounting are identi-
ﬁed by marking each track section “Do not pendant mount this track such
as by stems or wires.”

Track systems that are intended for recessed installation are marked “Suit-
able for Use in Painted Ceiling,” or “For use in ” if intended to
be an integral part of a suspended-ceiling grid. The blank space is filled in
with the manufacturer’s name and catalog number or product description of
the structural building system with which the track system is to be used.

PRODUCT IDENTITY

The following product identity appears on the product:
Track-lighting Fitting

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Elec-
trical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is
ANSI/UL 1574, “Track Lighting Systems.”

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the
product and the Certification Mark on the smallest unit container in which
the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identi-
ﬁer(s), and a file number.

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product
and the Listing Mark on the smallest unit container in which the product is
packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this

LUMINAIRE FITTINGS (IFFX)

This category covers luminaires fittings, which are incomplete parts and/or
subassemblies of luminaires, intended for final assembly into luminaires
in the field. Completely assembled luminaires incorporating luminaires fittings
may be submitted to UL as part of the Factory Inspection and Follow-Up
Service Program for fluorescent, incandescent and high-intensity-discharge
luminaires and, if found suitable, certified as luminaires. Smoothness and
thickness of wireways, methods for connection to a recognized wiring sys-
tem, suitability of splice enclosure and means for inspecting splices are typi-
cal considerations given to the completed luminaire which cannot be judged
until the fittings are assembled into a complete luminaire.

This category also covers luminare poles that do not exceed 12 ft in
length, measured from the base, or from the intended grade level of poles for installation partially in ground.

A complete luminaire assembled from certified luminaires fittings will bear
the luminaire Certification Mark appropriate to the luminaire category if
and only if all component parts are listed and approved by UL.

The determination of the acceptability of an assembly not so labeled rests
with the Authority Having Jurisdiction.

PRODUCT MARKINGS

All fittings are marked indicating the location where they can be used:
Fittings marked “DRY LOCATIONS ONLY” are intended to be
installed in indoor, dry locations.

Fittings marked “SUITABLE FOR DAMP LOCATIONS” are intended
to be installed in damp or dry locations.

Fittings marked “SUITABLE FOR WET LOCATIONS” are intended
to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary
Locations (AALZ) and in ANSI/NFPA 70, “National Electrical Code.”

All luminaires fittings bear a model, catalog or series number (or similar
designation) adjacent to the Certification Mark.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Swivel Joint

Other product identities may be used as shown in the individual certifica-
tions.

RELATED PRODUCTS

Certain devices in the categories of Sign Accessories (UYMR), Surface
Metal Raceways (RIBT), Surface Nonmetallic Raceways (RTXA), Surface
Metal Rigid Nonmetallic Raceway Fittings (RPPR) and Surface Raceway Fittings (RYJT)
are also suitable for use with luminaires fittings.

Luminaire poles exceeding 12 ft in length are covered under Luminaire
Poles (IUR).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Elec-
trical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the product is the only method provided
by UL to identify products manufactured under its Certification and
Follow-Up Service. The Certification Mark for these products includes the
UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identi-
ﬁer(s), and a file number.

Alternate Ul Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by
UL to identify products manufactured under its Listing and Follow-Up
Service. The Listing Mark for these products includes the UL symbol (as illus-
trated in the Introduction of this Directory) together with the word
“LISTED,” a control number, and the product name “Luminaire Fitting,”
“Swivel Joint” or “Disconnect Fitting,” or other appropriate product name as
shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fixture Fittings for Track Lighting (IFGT)

This category covers fixture fittings that are parts and/or subassemblies intended for field installation in specific track-lighting systems, identified by catalog number and company name. They include track-lighting-figure units intended for installation in specific existing field-installed tracks of another manufacturer in accordance with the fixture unit manufacturer's instructions. These fittings have been investigated to determine that, when installed and used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete track-lighting system.

PRODUCT IDENTIFICATION
The following product identity appears on the product:

Fixture Fittings for Track Lighting

ADDITIONAL INFORMATION
For additional information, see Luminaire Fittings (IFFX), Luminaire and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 1574, "Track Lighting Systems."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:

FOR USE ONLY WITH TRACK LIGHTING MODEL
MANUFACTURED BY
Alternate UL Mark

UL MARK
The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
FOR USE WITH [identification of which luminaires are to be used] ONLY
MANUFACTURED BY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECESSED LUMINAIRE TRIMS (IFGW)

Use

This category covers trims intended for field installation in specified recessed incandescent luminaires. These trims have been investigated to determine that, when used in accordance with the manufacturer's instructions, they comply with the appropriate requirements for the complete luminaire. This category covers trims for use with newly installed luminaires and as retrofit devices intended to be used to replace existing trims. The specified luminaires with which the trims have been investigated are identified in the Certification Mark on the trim.

PRODUCT MARKINGS
Each trim is marked with its catalog number and manufacturer. Each trim is also marked with the lamp-replacement markings, and may include the blinking-light-warning marking.

PRODUCT IDENTITY
The following product identity appears on the product:

Recessed Luminaire Trim

RELATED PRODUCTS

Recessed Luminaire Trims (IFGW) — Continued

Reflector retrofit kits used to add or replace reflectors in fluorescent luminaires are covered under Luminaire Conversions, Retrofit (IEUQ).

Retrofit devices used to convert incandescent exit fixtures to fluorescent exit fixtures are covered under Exit Sign Conversion Kits (FWC).

ADDITIONAL INFORMATION
For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS
The basic standard used to investigate retrofit luminaire trim conversions in this category is ANSI/UL 1598, "Luminaires."

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

LUMINAIRES AND FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IFGZ)

GENERAL
This category covers light-emitting-diode (LED) retrofit kits intended for field installation in luminaires.

The retrofit kits consist of LED light sources, installation instructions, subassemblies, luminaire marking labels, and assembly aids (where applicable) to facilitate the replacement of the existing light source in complete luminaires. The retrofit installation may require modifications to the luminaire in accordance with the installation instructions provided with the retrofit kits.

The LED retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer’s instructions, they do not adversely affect the operation of the luminaire. A luminaire that is modified so it can no longer accept the original lamp has a label provided by the retrofit kit manufacturer affixed to the luminaire where visible during relamping that indicates the luminaire has been modified and can no longer operate the originally intended lamp(s).

This category does not cover retrofit reflector kits and luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the luminaire.

LUMINAIRE MARKINGS
LED retrofit luminaire conversion kits that permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the retrofit luminaire. This marking is visible during relamping and states, “This luminaire has been modified and can no longer operate the originally intended lamp,” and additionally identifies the replacement LED lamp type/model to be used, together with the manufacturer’s name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit

installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

LED RETROFIT LUMINAIRE CONVERSION FOR USE IN HAZARDOUS LOCATIONS FOR USE ONLY WITH (+)

IN ACCORDANCE WITH THE INSTRUCTIONS PROVIDED WITH THIS RETROFIT KIT

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRE IDENTIFICATION

One of the following product identities appears on the product:

- Electric Fixture for Use in Hazardous Locations

LUMINAIRE, PAINT SPRAY BOOTH FOR USE IN HAZARDOUS LOCATIONS (IFYJ)

USE AND INSTALLATION

This category covers incandescent lamp, fluorescent lamp, high-intensity-discharge lamp, or surgical-type luminaires for use in hospital operating rooms, and luminaires for use with germicidal lamps.

Seals are provided in the luminaires for Class I, Division 1 hazardous locations between lamp chambers and wiring chambers for supply line connections. The luminaires have been tested with respect to safe maximum external temperatures.

Luminaires certified for use in any of the groups under Class II, Division 1 and 2 hazardous locations have been tested for dusttightness and safe operation in the presence of the specific combustible dusts. The equipment should be kept clean and should be carefully maintained so as not to allow combustible dust to accumulate on equipment or in buildings. The operating temperature of any parts which may be in contact with the combustible dust is marked on the luminaire if this temperature exceeds 100°C. The luminaires have been investigated for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such certifications are under hazardous location group headings with the suffix “Division 2 only” or under the heading “Class I, Division 2 only.”

Luminaires without guards should be used only where not subject to breakage.

Luminaires intended for use with germicidal lamps are marked with a caution notice regarding their installation so that users will not be subjected to unnecessary radiation.

Luminaires suitable for locations having deposits of readily combustible paint residues only are marked.

Luminaires requiring supply wiring with certain temperature ratings are so marked.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Electric Fixture for Use in Hazardous Locations

- Electric Lighting Fixture for Use in Hazardous Locations

- Electric Luminaires for Use in Hazardous Locations for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as applicable: “Electric Lighting Fixture for Hazardous Locations,” “Electric Fixture for Hazardous Locations,” “Electric Luminaire for Hazardous Locations,” or “Luminaire for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES, Recessed Type for Use in Hazardous Locations (IGBW)−Continued

Recessed fluorescent luminaires which include raceways are marked, in combination with the Certification Mark, “Suitable for use as Raceways” and are marked to indicate the maximum number, size, and type conductors they are intended to accommodate.

Recessed luminaires suitable for such use may be marked “Suitable for installation in poured concrete” except that recessed luminaires suitable only for installation in poured concrete are marked “For installation only in poured concrete.”

Luminaires known to produce temperatures in excess of 90°C at a distance of 1/2 in. from the enclosure walls, and which therefore are only suitable for installation in fire-resistant constructions are marked “The luminaire is suitable for installation only in buildings of fire-resistant construction, where the luminaire is not mounted on or adjacent to combustible material.”

Certifications of recessed luminaires for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such certifications are under hazardous location group headings with the suffix “Division 2 only” or under the heading “Class I, Division 2 only.” The luminaire should not be installed in any location where the ignition temperature of the gas of vapor-air mixture which may be present is less than the operating temperature marked on the luminaire.

PRODUCT IDENTIFIER

One of the following product identities appears on the product:

- Paint Spray Booth Lighting Fixture for Use in Hazardous Locations
- Paint Spray Booth Luminaire for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for use in and relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Paint Spray Booth Lighting Fixture for Use in Hazardous Locations” or “Paint Spray Booth Luminaire for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
LUMINAIRE FITTINGS FOR USE WITH SPECIFIED FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IGMX)

This category covers luminaire fittings intended for field installation only with specified compatible certified luminaire fittings (see IGIV) to form complete luminaires as identified in the individual certifications.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fixture Fitting fitted for Hazardous Locations
- Luminaire Fitting fitted for Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations,” in addition to the hazardous (classified) locations standards referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Fixture Fitting for Hazardous Locations,” “Luminaire Fitting for Hazardous Locations,” “Electric Lighting Fixture for Hazardous Locations When Completely Assembled With UL Listed Fixture Fittings for Hazardous Locations,” “Luminaire for Hazardous Locations When Completely Assembled With UL Listed Luminaire Fittings for Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

**Look for the UL Mark on Product**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRE FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IFGZ)

Luminaire Fittings for Use in Hazardous Locations

Luminaire for Use in Hazardous Locations When Completely Assembled with UL-certified Luminaire Fittings for Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ). The Listing Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

- **+ FITTING FOR HAZARDOUS LOCATIONS**
- **HEREWITH LISTED - FITTINGS SPECIFIED IN MARKINGS IN OR ON THE PRODUCT**
- **Control No.**

+ **LUMINAIRE or FIXTURE**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LIGHTING UNIT FITTINGS, AUXILIARY FOR USE IN HAZARDOUS LOCATIONS (IGOY)**

This category covers substations of lighting units, battery packs, charging sections and control devices intended for final assembly into battery-powered auxiliary lighting units in the field.

This unit equipment is intended to provide auxiliary light from included light sources only, when the normal power supply to the equipment is disconnected or otherwise interrupted. The lighting circuit ratings do not exceed 250 V for tungsten lamps. The investigation of automatic transfer devices includes the determination of their suitability for the auxiliary supply circuit. Information or instructions are provided specifying the substations that may be used to assemble an auxiliary lighting unit in the field.

The unit equipment has not been investigated to determine its conformity with Article 700 of ANSI/NFPA 70, “National Electrical Code,” covering emergency lighting.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Auxiliary Lighting Unit Fitting for Use in Hazardous Locations
- Auxiliary Lighting Unit for Use in Hazardous Locations When Completely Assembled with UL-certified Auxiliary Lighting Unit Fittings for Hazardous Locations
- Auxiliary Lighting Unit for Use in Hazardous Locations When Completely Assembled with UL-certified Fixture Fittings for Hazardous Locations
- Auxiliary Lighting Unit for Use in Hazardous Locations When Completely Assembled with UL-certified Luminaire Fittings for Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ). The Listing Mark for these products includes the UL symbol, the word “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Auxiliary Lighting Unit Fitting for Use in Hazardous Locations,” “Auxiliary Lighting Unit When Completely Assembled with UL Listed Luminaire (or Fixture) Fittings for Hazardous Locations” or “Auxiliary Lighting Unit When Completely Assembled with UL Listed Auxiliary Lighting Unit Fittings for Hazardous Locations.”
LUMINAIRE TYPES

**GENERAL**

This category covers marine-type electric luminaires designed for use on marine vessels in accordance with the Electrical Engineering Regulations of the United States Coast Guard, No. CG-259. This category includes luminaires of the recessed and nonrecessed types for use on shipboard. This category does not cover luminaires for use in hazardous (classified) locations as defined in ANSI/NFPA 70, “National Electrical Code.”

The Electrical Engineering Regulations of the United States Coast Guard classify luminaires as “Inside Type,” “Inside Drip-Proof Type” or “Outside Type.”

An “Inside Type” luminaire is intended for use in dry locations, which are deemed to be passenger’s and crew’s quarters, radio room, gyro room, chart room, pantry, passageways adjacent to quarters, and public washrooms and toilets which are not equipped with baths or showers. An “Inside Drip-proof Type” luminaire is intended for use in damp or wet locations which are deemed to be locations exposed to the weather on vessels operating in fresh water, machinery spaces, cargo spaces, refrigerated spaces, laundry, public washrooms or toilets equipped with baths or showers, and areas which are directly inside of access doors to a weather deck and exposed to the entrance of rain or spray.

An “Outside Type (fresh water)” luminaire is intended for use in severely damp or wet locations such as on the weather deck, or directly inside of access doors to a weather deck and exposed to the entrance of rain or spray; on vessels operating in fresh water.

An “Outside Type (salt water)” luminaire is intended for use in corrosive locations, which are deemed to be locations exposed to weather on vessels operating in salt water.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LUMINAIRE TYPES**

**PRODUCT TYPES**

Inside Dripproof-type Through-hull Underwater Luminaire — A through-hull underwater luminaire for use where the nonimmersed portion of the luminaire is suitable for exposure to dripping oil or water.

Inside-type Through-hull Underwater Luminaire — A through-hull underwater luminaire suitable for use only where the nonimmersed portion of the luminaire is in a dry location.

Outside-type Through-hull Underwater Luminaire — A through-hull underwater luminaire suitable for use where the nonimmersed portion of the luminaire is outside or other wet location involving water exposure more severe than dripping water.

Recessed Luminaires — Where either of the through-hull assembly or any remote electrical enclosure is intended for passing through, or located wholly or partially in, an air- or insulation-filled space between the inside surface of the vessel hull and a supplemental vessel compartment wall located in front of the hull surface, the term “Recessed” is added to the type designation, preceding the other terms. The installation instructions identify which part, the through-hull assembly and any remote electric enclosure, is intended for recessed installation.

**PRODUCT MARKINGS**

The through-hull assembly of a luminaire without a remote electrical assembly, or the remote electrical assembly of an assembly, where provided, is marked with the voltage rating, ac or dc, and amperes or watts. Polarity identification is provided for ac-rated luminaries and, where necessary for operation, dc-rated luminaries.

Each through-hull assembly and any remote electrical assembly is marked as an inside type, inside drip-proof type, or outside-type through-hull underwater luminaire. Where applicable as specified under PRODUCT TYPES, the term “Recessed” is added to the type designation, preceding the other terms.

The through-hull assembly of a luminaire without a remote electrical assembly, and the remote electrical assembly where part of the luminaire, is marked “Ignition Protected” if found to comply with the ignition-protection requirements. Each through-hull assembly and any remote electrical assembly that does not comply with the ignition-protection requirements is marked, where visible from within the marine vessel after installation, with the word “DANGER,” and the following or equivalent: “Possible ignition source. Install outside area requiring ignition protection.”

A luminaire not complying with the Vibration Test in UL 1121, “Marine Through-Hull Fittings and Se-Valves,” is marked “For use only on vessels with length exceeding 65 ft (19.8 m),” with length value and associated unit symbol appearing in parentheses.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Inside Dripproof-type Through-hull Underwater Luminaire
- Inside-type Through-hull Underwater Luminaire
- Outside-type Through-hull Underwater Luminaire
- Recessed Inside-type Through-hull Underwater Luminaire
- Recessed Inside-type Through-hull Underwater Luminaire
- Recessed Outside-type Through-hull Underwater Luminaire

**RELATED PRODUCTS**

General utilitarian-type electric luminaires intended for deck and bulkhead mounting on marine vessels are covered under Luminaires, Miscellaneous, Marine (IGZR).

CAB lights, floodlights, searchlights, and ordinary luminaires intended for use on any vessel are covered under Luminaires, Nonrecessed, Marine (IHHL).

**ADDITIONAL INFORMATION**

For additional information, see Luminaires, Marine (IGQY), Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AAAL).

**REQUIREMENTS**

The basic standards used to investigate products in this category are:

- ANSI/UL 676, “Underwater Luminaires and Submersible Junction Boxes”
- ANSI/UL 1598A, “Supplemental Requirements for Luminaries for Installation on Marine Vessels”
- ABYC E-11, “AC & DC Electrical Systems on Boats”

Products marked “Ignition Protected” have additionally been investigated to UL 1500, “Ignition-Protection Test for Marine Products.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “MARINE,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word “MARINE” above the UL symbol (as illustrated in the Introduction of this Directory), the word “LISTED,” a control number, and one of the following product names:

- “Inside Dripproof-type Through-hull Underwater Luminaire”
- “Inside-type Through-hull Underwater Luminaire”
- “Outside-type Through-hull Underwater Luminaire”
- “Recessed Inside-type Through-hull Underwater Luminaire”
- “Recessed Inside-type Through-hull Underwater Luminaire”

LUMINAIRES AND FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IHRV)

LUMINAIRES AND FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IHSN)

USE
This category covers subassemblies of luminaires intended for final assembly into luminaires in the field. Information or instructions are provided specifying the subassemblies that may be used to assemble a luminaire in the field.

Also included are conduit boxes and bodies with threaded hubs, adjustable hangers, and flexible luminaire fittings with threaded hubs, for support of luminaires. Information on restrictions in the use of these fittings and as applicable to the assembled luminaire is marked on the fittings or provided with the fittings.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Electric Lighting Fixture for Use in Hazardous Locations When Completely Assembled With UL-certified Fixture Fittings for Hazardous Locations
- Luminaire for Use in Hazardous Locations When Completely Assembled With UL-certified Luminaire Fittings for Hazardous Locations

ADDITONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS
The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Lighting Fixture for Hazardous Locations” or “Luminaire for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLASHLIGHTS AND LANTERNS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IJRF)

USE
This category covers flashlights and lanterns for use in any of the groups under Class I, Zone classified hazardous locations. They have been investigated with respect to use in the presence of specific flammable gas or vapor-air atmospheres. The tests have been conducted using specific lamp and battery combinations. The lamp designation and the number, type, size and voltage of the batteries to be used are marked on the product.

Safety of operation in the presence of explosive mixtures may be endangered if replacement parts other than those specified on the product are used.

PRODUCT IDENTITY
One of the following product identities appears on the product:
- Flashlight for Use in Hazardous Locations
- Lantern for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ). The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and
FLASHLIGHTS AND LANTERNS FOR USE IN HAZARDOUS LOCATIONS

**(IKBR)**

**GENERAL**

This category covers battery-powered flashlights and lanterns. They have been investigated using the specific lamp and battery combinations specified by the manufacturer. The lamp designation and the number, type, size and voltage of the batteries intended to be used is marked on the product.

Flashlights and lanterns that utilize incandescent lamps are provided with a filament-disconnect mechanism or other type of construction to protect against ignition of the specified hazardous atmosphere. The filament-disconnect mechanism is intended to disconnect the lamp bulb from the circuit when the glass bulb or envelope surrounding the lamp filament is broken.

Intrinsically safe flashlights and lanterns are so marked on the device. The safety of operation in the presence of explosive mixtures may be compromised if replacement parts other than those specified on the product are used.

Flashlights and lanterns are not intended for use in hospital operating rooms unless so marked on the device.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Flashlight for Use in Hazardous Locations
- Lantern for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 783, “Electric Flashlights and Lanterns for Use in Hazardous (Classified) Locations,” or ANSI/UL 913, “Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division I, Hazardous (Classified) Locations.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flashlight for Use in Hazardous Locations” or “Lantern for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FLAT CONDUCTOR CABLE, TYPE FCC (IKKT)**

**GENERAL**

This category covers flat conductor cable, Type FCC, which is an assembly of three or more solid, flat, parallel, insulated copper conductors. The cable is intended for installation in accordance with Art 324 of ANSI/NFPA 70, “National Electrical Code.” The cable is marked for use with specific fittings [see Flat Conductor Cable Fittings (IKMW)] to make up a particular flat conductor cable, Type FCC, wiring system.

The cable is marked on both sides with the manufacturer’s identification, wire size in AWG, Type FCC, 300 V, temperature rating and ampacity. Type FCC cable always has one conductor identified as the grounding conductor and one conductor identified as the grounded conductor. The identification means shall be printing or striping the conductor green (grounding) or white (grounded).

Installation instructions are supplied by the manufacturer for use by the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Flat Conductor Cable, Type FCC

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flat Conductor Cable, Type FCC.”

In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**USE AND INSTALLATION**

This category covers flat conductor cable fittings, which include all those items needed to install flat conductor cable, Type FCC (see IKKI) in accordance with Article 324 of ANSI/NFPA 70, "National Electrical Code." This category includes top and bottom shields, connectors, transition assemblies and insulators.

A fitting is suitable for use with a specific Type FCC cable in a particular flat conductor cable wiring system and is so identified.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Flat Conductor Cable Fitting

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ANSI/UL 498, “Attachment Plugs and Receptacles,” and ANSI/UL 486A-486B, “Wire Connectors.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

---

**FLASHLIGHTS AND LANTERNS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IJRF)**

*Follow-Up Service: The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.*

*Alternate UL Mark*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flashlight for Use in Hazardous Locations” or “Lantern for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

*In performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.*
This category covers flexible lighting products intended for decorative use, consisting of nonreplaceable lamps connected in series/parallel strings and enclosed within a flexible polymeric tube or extrusion. Flexible lighting products are provided with an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit. Flexible lighting products may be battery operated or provided with a Class 2 power supply. These lights do not have provisions for permanent mounting to a building or structure and should not be installed in a manner that can cut or damage the outer insulation. They are intended to only be connected as a complete unit and not field cut unless the flexible lighting products are in the secondary of a Class 2 circuit. These flexible lighting products have not been investigated for use within another enclosure.

Flexible lighting products also cover flexible light sculptures, which are intended for decorative use and consist of a polymeric or rigid frame to which a flexible lighting product is attached. The flexible lighting product attached to the light sculpture provides outline lighting of the figure or object created by the frame. Flexible lighting sculptures whose primary purpose is to be a sign (not decorative) are not covered by this category.

Flexible lighting products are intended for indoor use unless marked for outdoor use.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Flexible Light
- Flexible Light Sculpture

**RELATED PRODUCTS**

- Electric signs are covered under Signs (UXYT).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 2388, “Flexible Lighting Products.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flat Conductor Cable Fitting.”

**GENERAL**

This category covers household and commercial garment-finishing appliances. Garment-finishing appliances may be of the automatic or nonautomatic type.

Most products covered under this category are limited to use on alternating current; this limitation is marked on the nameplate.

Garment-finishing appliances incorporating rotary-type devices are required to employ a readily operable safety-release mechanism, which is independent of the connection of the machine to the electrical power supply.

Some garment-finishing appliances use steam and/or air for the purpose of forming and/or removing wrinkles from garments. The steam may be supplied by electric steam generators integral with the appliance or from an external steam source.

This category also covers devices provided with mechanical and/or air-inflatable forms to form garments during the steaming operation.

Motors used in permanently connected equipment and intended for continuous-duty operation are prevented from hazardous overheating by thermal protectors, overcurrent protective devices, or inherent impedance.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Automatic Garment-finishing Appliance
- Clothes Refresher Cabinet
- Garment Steamer
- Hand-held Garment Steamer
- Lightweight Iron

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

- Electric irons are covered under Electric Irons (NBEZ).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 141, “Garment Finishing Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flat Conductor Cable Fitting.”

**GENERAL**

This category covers flexible metallic tubing in trade sizes 3/8, 1/2 and 3/4 (metric designators 12, 16 and 21) for installation in accordance with Article 360 of ANSI/NFPA 70, “National Electrical Code.” This tubing is intended for installation and use in accordance with the following information.

Flexible metallic tubing is intended for installation where not subject to physical damage such as above suspended ceilings. Flexible metallic tubing is permitted to be used in lengths of six ft or less, in dry locations, in accessible locations when protected from physical damage or concealed, to contain branch-circuit conductors at a maximum potential of 1000 V and wherein terminated in suitable fittings.

Flexible metallic tubing should not be used underground for direct earth burial or in duct which is buried, or embedded in poured concrete or aggregate or in direct contact with the earth or where subjected to corrosive conditions or in direct contact with metallic or nonmetallic structures. Flexible metallic tubing containing circuit conductors protected by overcurrent devices rated 20 A or less is suitable as a grounding means.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Flexible Metallic Tubing

**RELATED PRODUCTS**

- See Fittings, Flexible Metallic Tubing (ILNR) with respect to fittings suitable as a grounding means.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).
REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1652, “Outline of Investigation for Flexible Metallic Tubing.”

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the attached tag, reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Metallic Tubing.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FITTINGS, FLEXIBLE METALLIC TUBING (ILNR)

GENERAL

This category covers flexible-metallic-tubing fittings in trade sizes 3/8, 1/2 and 3/4 (metric designators 12, 16 and 21). This tubing is intended for grounding applications in accordance with the following information and the limitations specified in Flexible Metallic Tubing (IIJW).

All male threaded fittings have only been investigated for use with locknuts.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, “National Electrical Code.” The conduit used with the connectors should contain conductors protected by overcurrent devices rated 20 A or less.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

Fittings have been tested for use only with steel tubing unless marked on the device or carton to indicate suitability for use with aluminum or other material.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Connector
Coupling
Flexible Metallic Tubing Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flexible Metallic Tubing (IIJW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Fittings, Flexible Metallic Tubing (ILNR)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE STAGE AND LIGHTING POWER CABLE (ILPH)

USE AND INSTALLATION

This category covers flexible stage and lighting power cable constructed for use in accordance with Article 400 of ANSI/NFPA 70, “National Electrical Code” (NEC). Flexible stage and lighting cable consists of either a single insulated conductor or two or more insulated conductors, with or without fully insulated equipment grounding conductors, with an overall jacket.

RATINGS

The cable is rated 600 V, 60°C, 75°C, 90°C or 105°C. The cable is intended for use at ampacities assigned to 90°C in accordance with Table 400.5(B) of the NEC. Cable rated 105°C has the same ampacities assigned to 90°C rated cable in Table 400.5(B) and is so marked.

Flexible stage and lighting power cable employs flexible stranded copper conductors in a size range of 8 AWG to 250 kcmil and is designated as Type SC (thermoset insulation and jacket), Type SCT (thermoplastic insulation and jacket), and Type SCE (thermoplastic elastomer insulation and jacket).

PRODUCT MARKINGS

Cable marked “Oil Resistant 60°C” is suitable for exposure to oil at 60°C. Cable marked “Oil Resistant 75°C” is suitable for exposure to oil at 75°C.

Flexible stage and lighting power cable employs flexible stranded copper conductors in a size range of 8 AWG to 250 kcmil and is designated as Type SC (thermoset insulation and jacket), Type SCT (thermoplastic insulation and jacket), and Type SCE (thermoplastic elastomer insulation and jacket).

PRODUCT IDENTITY

The following product identity appears on the product:

Flexible Stage and Lighting Power Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

FLOOR CLEANERS FOR USE IN HAZARDOUS LOCATIONS (ILQV)

GENERAL

This category covers floor cleaners consisting of an aqueous solution of detergents and certain other materials. These cleaners have been classified as to use on electrically conductive floorings certified by UL.

USE AND INSTALLATION

This category covers two types of floor cleaners for use in hazardous locations: Floor cleaners containing cleaners having a water resistance rating of 60°C or lower, and cleaners containing cleaners having a water resistance rating of greater than 60°C.

RATINGS

The water resistance rating is the maximum temperature of the water to which the cleaner is suitable for immersion. These cleaners are intended for use in hazardous locations where the presence of flammable or explosive atmospheres is not continuous.

PRODUCT MARKINGS

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Metallic Tubing (ILQV)—Continued” on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Metallic Tubing (ILQV)—Continued” on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLOOR CLEANERS FOR USE IN HAZARDOUS LOCATIONS (ILQV)—Continued

GENERAL

This category covers floor cleaners consisting of an aqueous solution of detergents and certain other materials. These cleaners have been classified as to use on electrically conductive floorings certified by UL.
FLOORING, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (INFZ)

**USE**

This category covers electrically conductive floorings intended for use in industrial plants, arsenals, hospital operating rooms, and similar locations where it is necessary to reduce the risk of accumulation of static electricity. Tests indicate that these floorings, when installed and maintained in accordance with the manufacturer's instructions, are moderately electrically conductive and dissipate electrostatic charges on persons and conductive equipment making electrical contact with the floorings, and that the electrical resistance conforms to ANSI/NFPA 99, "Health Care Facilities Code."

Conductive footwear on personnel, and conductive equipment fitted with conductive bases, leg tips, or casters making electrical contact with the flooring are required in order to make conductivity of the flooring effective in equalizing electrostatic charges. A grounding connection to the flooring may be provided.

To dissipate static electrical charges that may be present on persons or movable equipment before entering the hazardous area, these floorings should extend into rooms and corridors immediately serving or communicating with the hazardous area.

Insulating floor waxes should not be used on these floorings. When flammable solvents or adhesives are used during application of the flooring, precaution should be taken to obtain adequate ventilation and to avoid sources of ignition.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electrically Conductive Floor Material Relating to Hazardous Locations
- Electrically Conductive Flooring Relating to Hazardous Locations
- Floor Tile Relating to Hazardous Locations

**ADDITIONAL INFORMATION**

- The basic standard used to investigate products in this category is UL 779, "Electrically Conductive Floorings."
- The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.
- The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, and the product name "Electrically Conductive Flooring Relating to Hazardous Locations," "Electrically Conductive Floor Material Relating to Hazardous Locations," or "Floor Tile Relating to Hazardous Locations."

---

**FLOOR CLEANERS FOR USE IN HAZARDOUS LOCATIONS (ILQV)**

The use of these floor cleaners on certified floorings does not adversely affect their electrical conductivity or their ability to dissipate electrostatic charges on persons and conductive equipment electrically contacting them.

These floor cleaners are free from any tendency to heat spontaneously under use conditions.

The manufacturer's instructions for use of these floor cleaners should be followed.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 779, "Electrically Conductive Floorings."

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Electrically Conductive Flooring Relating to Hazardous Locations,” “Electrically Conductive Floor Material Relating to Hazardous Locations,” or “Floor Tile Relating to Hazardous Locations.”
Food-preparing Machines, Commercial (IPST)–Continued

Food-preparing Machines, Commercial (IPST)

Custom-built food-preparation or serving equipment consisting of drop-in components, shelf heaters, plate warmers or heated food displays, etc., is covered under Commercial Cooking Appliances (KNGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 763, “Motor-Operated Commercial Food Preparing Machines.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name—“Commercial Food-preparing Machine” or “Meat Slicer,” or other appropriate product name as shown in the individual Listings.

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

FOOD-PREPARING MACHINES (IPNX)

FOOD-PREPARING MACHINES, COMMERCIAL (IPST)

USE AND INSTALLATION

This category covers electrically operated machines intended for use in commercial kitchens associated with restaurants, hospitals or other business establishments where they are not ordinarily accessible to the general public. They are used in the processing or combination processing and serving of foods and food products and may be provided with such miscellaneous attachments as bowls, sieves, dropers, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual certifications and covered in the installation and use instructions.

In general, the intended application of the product is such as to render the product inappropriate for household use, unless the product has also been certified under Food-preparing Machines, Household (IPWZ). Commercial food-preparing machines such as meat- and bread-slicing machines, choppers, meat saws, etc., employing knives, screw- or worm-type feeding mechanisms, etc., are investigated for risk of personal injury, electric shock and fire. These machines are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of accidents. In determining the need for protection against the risk of personal injury, consideration is given to the required utility of the product in a commercial application and the fact that experienced operators will most likely use the product.

Some products in this category have cutting or moving parts, presenting certain risks of personal injury that cannot be wholly eliminated by practical design features; such risks have been reduced to an acceptable degree. If a product is suitable for built-in installation, side-by-side mounting or stacking, it is so indicated in the installation instructions.

If a product is of a type designed for permanent connection to water supply or waste disposal lines at the point of installation, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

Some equipment may be designed to accept accessories in the field. In such cases, both the commercial food-preparing machine and the accessory (attachment) are marked to relate the two for proper installation.

In cases where the nature or construction of equipment is such that special precautions beyond those required of ANSI/NFPA 70, “National Electrical Code,” must be observed in installation or use, warnings or special instructions are on the equipment visible after installation and during use where applicable.

REBUILT PRODUCTS

This category also covers commercial motor-operated food-preparing machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial motor-operated food-preparing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial motor-operated food-preparing machines are subject to the same requirements as new commercial motor-operated food-preparing machines.

FACTORS NOT INVESTIGATED

The sanitation of these products has not been investigated. See Commercial Powered Food Preparation Equipment, Sanitation (DUIA) for more information.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Commercial Food-preparing Machine

Meat Slicer

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

RELATED PRODUCTS

Accessories intended for use with commercial food-preparing machines are covered under Food-preparing Machine Accessories, Commercial (IPUW).

Refrigerated beverage and/or ice dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

Refrigerated ice cream makers are covered under Ice Cream Makers (SINX).
### FUEL CELL EQUIPMENT (IRGN)

#### USE AND INSTALLATION

This category covers fuel cell type power systems with input/output rated 600 V or less and intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.” These products are marked for indoor or outdoor use. Authorities Having Jurisdiction should be consulted regarding the use of this equipment before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

#### PRODUCT MARKINGS

These systems are marked with the manufacturer’s name, model number, type of fuel, and the statement “For Use with ____ Model ____ Fuel Cell Power System” (or equivalent).

Removable fuel cartridges are also marked with the following (or equivalent wording): “WARNING: This Product Contains Methanol, Which is an Eye, Skin, and Respiratory Tract Irritant. Methanol May Cause Blindness or Death if Swallowed. If Methanol is Exposed, Contain and Dispose of Methanol. Use in Well-Ventilated Areas. Read and Understand All Instructions Before Use. Keep Out of Reach of Children.”

Fuel cell systems are covered by the supporting Materials Communications, Emergency Response Information, and Training Requirements.

### FUEL CELL POWER SYSTEMS FOR USE IN INDUSTRIAL TRUCKS (IRGQ)

#### USE AND INSTALLATION

This category covers fuel cell power systems intended to be installed in Type CGH industrial trucks used in locations as defined in ANSI/NFPA 505, “Fire Safety Standard for Powered Industrial Trucks Including Type Designations, Areas of Use, Conversions, Maintenance, and Operations,” and ANSI/NFPA 70, “National Electrical Code.”

These fuel cell power systems are self-contained (that is, a complete system incorporated into its own housing that is intended to replace or be combined with a battery system to power an industrial truck).

These systems are intended for use in equipment as described in ANSI/UL 583, “Electric-Battery-Powered Industrial Trucks.”

These systems have a storage pressure rating of either 25 MPa or 35 MPa and are fueled with gaseous hydrogen using on-board refueling, as these systems incorporate hydrogen storage that is not removable for refueling purposes.

This category does not cover fuel cell power systems intended for use in on-road vehicles.

#### PRODUCT MARKINGS

These systems are marked to indicate the manufacturer’s name, model number, type of fuel required including service pressure and maximum operating pressure, output electrical ratings, rated ambient temperature range, weight of the fuel cell system, and center of gravity of the fuel cell power system.

These systems are also marked with the effective end-of-service date for the hydrogen pressure vessel in a location where it will be visible after installation of the fuel cell system in the industrial truck end application.

Products intended to be used in locations with elevated wind speeds are marked with the maximum wind speed in mph. Products investigated for a minimum IP rating may be marked with that IP rating.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Fuel Cell Power System for Use in Industrial Trucks

**RELATED PRODUCTS**

Stationary fuel cell systems are covered under Stationary Fuel Cell Systems (IRGZ).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

#### REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2267, “Fuel Cell Power Systems for Installation in Industrial Electric Trucks.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuel Cell Power System for Use in Industrial Trucks.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### HAND-HELD OR HAND-TRANSPORTABLE FUEL CELL POWER UNITS AND DISPOSABLE FUEL CARTRIDGES (IRGU)

#### USE AND INSTALLATION

This category covers hand-held or hand-transportable alkaline (direct borohydride) fuel cell power systems intended to provide a dc electrical power source not exceeding 60 V ac and 240 VA, and accessory removable methanol fuel cartridges with a fuel capacity not exceeding 950 mL.

This category also covers hand-held or hand-transportable alkaline (direct borohydride) fuel cell power systems intended to provide a dc electrical power source not exceeding 60 V ac and 240 VA, and accessory removable methanol fuel cartridges with a liquid fuel capacity not exceeding 1 L.

Removable methanol fuel cartridges transporting hazardous fuels for use with the direct methanol fuel cell systems are intended to comply with the requirements of the U.S. Department of Transportation and in accordance with 49CFR172, “Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements.”

**PRODUCT MARKINGS**

Direct Methanol Systems

Direct methanol fuel cell power systems are marked with the manufacturer’s name, model designation and fuel type. These products are also marked with the following (or equivalent wording): “WARNING: This Product Contains Methanol, Which is an Eye, Skin, and Respiratory Tract Irritant. Methanol May Cause Blindness or Death if Swallowed. If Methanol is Exposed, Contain and Dispose of Methanol. Use in Well-Ventilated Areas. Read and Understand All Instructions Before Use. Keep Out of Reach of Children.”

Fuel cell systems found to provide limited power output in accordance with UL Subject 2265A, “Outline of Investigation for Hand-Held or Hand-Transportable Fuel Cell Power Units with Disposable Methanol Fuel Cartridges for Use in Original Equipment Manufacturer’s Information Technology Equipment,” are additionally marked “Limited Power Supply” (or “LPS”).

Removable fuel cartridges are marked with the manufacturer’s name, model number, type of fuel, and the statement “For Use with ____ Model ____ Fuel Cell Power System” (or equivalent).

Removable fuel cartridges are also marked with the following (or equivalent wording): “WARNING: This Product Contains Methanol, Which is an Eye, Skin, and Respiratory Tract Irritant. Methanol May Cause Blindness or Death if Swallowed. If Methanol is Exposed, Contain and Dispose of Methanol. Keep Out of Reach of Children. Never Expose to Heat Above 140°F (60°C) or to Prolonged Sunlight. Never Puncture or Put in Fire. Do Not Crush, Disassemble or Mutilate. Read and Understand All Instructions Before Use.”

Fuel cell systems are covered by the supporting Materials Communications, Emergency Response Information, and Training Requirements.

Fuel cartridges for hand-held or hand-transportable fuel are marked with appropriate identifying information for products containing methanol, as outlined in 49CFR106, “Rulemaking Procedures.”

Alkaline (Direct Borohydride) Systems

A borohydride fuel cartridge and single-use alkaline system is marked with the following (or equivalent wording): “WARNING: Contents are Corrosive and Toxic. Do Not Disassemble. Avoid Contact with Contents. Do Not Expose to Flame or Heat Above 100°F (22°C); Do Not Expose to Acids, Oxidizers, Alcohol or Household Cleaning Products. Follow Usage Instructions. In the Case of Contact with Contents, Seek Medical Attention.”

Fuel cell power systems found to provide limited power output in accordance with UL Subject 2265C, “Outline of Investigation for Hand-Held or Hand-Transportable Alkaline (Direct Borohydride) Fuel Cell Power Units and Borohydride Fuel Cartridges for Use with Consumer Electronics or Information Technology Equipment,” may additionally be marked “Limited Power Supply” (or “LPS”).

Fuel cell power systems and fuel cartridges are marked with the manufacturer’s name, model number, fuel composition and amount of fuel. Fuel cell systems are additionally marked with their electrical output ratings.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Alkaline Fuel Cell Power Unit (for alkaline fuel cell systems)
- Alkaline Fuel Cell Power Cartridge (for alkaline fuel cell systems)
- Direct Borohydride Fuel Cell Power Unit (for alkaline fuel cell systems)
- Direct Borohydride Fuel Cell Power Cartridge (for alkaline fuel cell systems)
- Direct Methanol Fuel Cell Power Unit (for methanol systems)
- DM Fuel Cell Power Unit (for methanol systems)
- Methanol Fuel Cartridge (for methanol systems)
Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU)–Continued

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
Component fuel cell modules intended for use in a portable application, but not intended for use with hand-held or hand-transportable equipment are covered under Fuel Cell Modules (IRGR2).

ADDITIONAL INFORMATION
For additional information, see Fuel Cell Equipment (IRGN) and Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS
The basic requirements used to investigate direct methanol systems in this category are contained in UL Subject 2265A, “Outline of Investigation for Hand-Held or Hand-Transportable Fuel Cell Power Units with Disposable Methanol Fuel Cells” for Use in Original Equipment Manufacturer’s Information Technology Equipment.”

The basic requirements used to investigate alkaline (direct borohydride) systems in this category are contained in UL Subject 2265C, “Outline of Investigation for Hand-Held or Hand-Transportable Alkaline (Direct Borohydride) Fuel Cell Power Units and Borohydride Fuel Cartridges for Use with Consumer Electronics or Information Technology Equipment.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Direct Methanol Fuel Cell Power Unit” (or “DM Fuel Cell Power Unit”) or “Methanol Fuel Cartridge” for methanol systems, or “Alkaline Fuel Cell Power Unit,” “Direct Borohydride Fuel Cell Power Unit” or “Borohydride Fuel Cartridge” for alkaline fuel cells, or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE FUEL CELL POWER SYSTEMS (IRGY)

USE AND INSTALLATION
This category covers portable fuel cell power systems intended for use in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). These products have an input/output rating of 600 V or less, and are intended for use as marked with the appropriate fuel. These products are intended as a portable source of supply in accordance with the manufacturer’s instructions.

These products may be restricted to use within controlled environments, which are environments that are heated, indoor locations, such as computer rooms, offices or factory floors, that are relatively free of conductive contaminants, such as carbon dust and the like. Portable fuel cell power systems restricted to this use are marked as noted under PRODUCT MARKINGS below.

This category also covers fuel cell systems used as a source of auxiliary power (not for motive power) within recreational vehicles in accordance with Article 551 of the NEC, to be installed in accordance with the manufacturer’s instructions.

This category does not cover the replaceable or refillable fuel cartridges that are used to fuel the portable fuel cell systems or fuel cells used as an auxiliary power source in recreational vehicles, with the exception of disposable borohydride fuel cartridges with integral fuel processing.

PRODUCT MARKINGS
These products are marked to indicate the manufacturer’s name, model number, serial number, type of fuel required and minimum and maximum gas supply pressure if using gaseous fuels, fuel consumption at rated electrical output, minimum operating hours at full load per one tank of fuel, input and output electrical ratings, output power factor if less than unity unless marked in both W and VA or W and A, and rated ambient temperature range.

Portable Fuel Cell Power Systems (IRGY)—Continued

Products intended for use in controlled environments are marked “CAUTION: For Use in Controlled Environments. Refer to Manual for Environmental Conditions.”

Products intended for indoor use only are marked “WARNING: For Indoor Use Only.”

Products intended for outdoor use only are marked “WARNING: For Outdoor Use Only.”

PRODUCT IDENTITY
The following product identity appears on the product:

Borohydride Fuel Cartridge
Portable Fuel Cell Power System

RELATED PRODUCTS
Stationary fuel cell power systems are covered under Stationary Fuel Cell Power Systems (IRGZ).

Fuel cell systems intended for use in industrial trucks are covered under Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ).

Micro fuel cells and their cartridges are covered under Hand-Held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU).

Fuel cell modules are covered under Fuel Cell Modules (IRGR2).

Portable engine generators that employ internal-combustion engines as their source of power are covered under Engine Generators for Portable Use (FTCN).

Engine generators intended for use in recreational vehicles that employ internal-combustion engines as their source of power are covered under Engine Generators for Recreational Vehicles (FTCZ).

ADDITIONAL INFORMATION
For additional information, see Fuel Cell Equipment (IRGN) and Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS
The basic standard used to investigate products in this category, with the exception of disposable borohydride fuel cartridges, is ANSI/CSA America FC 3 (2004), “Portable Fuel Cell Power Systems.”

Systems that use methanol as a source of fuel are additionally investigated to the methanol emissions test and fuel gas compatibility test as outlined in UL Subject 2265A, “Outline of Investigation for Hand-Held or Hand-Transportable Fuel Cell Power Units with Disposable Methanol Fuel Cartridges for Use in Original Equipment Manufacturer’s Information Technology Equipment.”

Systems intended to be installed as auxiliary power sources in recreational vehicles are additionally investigated to the vibration test in ANSI/UL 458, “Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts.”

The basic requirements used to investigate disposable borohydride fuel cartridges for use in portable fuel cell power systems in this category are contained in UL Subject 2265A, “Outline of Investigation for Borohydride Fuel Cartridges with Integral Fuel Processing for use with Portable Fuel Cell Power Systems or Similar Equipment.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings
Products covered under this category are additionally marked with the following information:

ANSI/CSA AMERICA FC 3-4+(++)
(+Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard
Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, the product name “Portable Fuel Cell Power System,” and the statement “In Accordance with ANSI/CSA America FC 3-4+(++),” or the product name “Borohydride Fuel Cartridge.”

(+Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard
Alternate UL Mark
UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIONARY FUEL CELL POWER SYSTEMS (IRGZ)

USE AND INSTALLATION
This category covers stationary fuel cell power systems for use as indicated in the Introduction of this Directory (together with the word “LISTED”) control number, and the product name “Direct Methanol Fuel Cell Power System” or “Alkaline Fuel Cell Power System,” “Direct Borohydride Fuel Cell Power System,” or “Borohydride Fuel Cartridge” for alkaline fuel cells, or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
FUEL CELL EQUIPMENT (IRGN)—Continued

Stationary Fuel Cell Power Systems (IRGZ)

This category covers stationary fuel cell power systems intended for use in accordance with ANSI/NFPA 70, “National Electrical Code.” These products have an input/output rating of 600 V or less, and are intended for use as marked with the appropriate fuel. These products are intended for permanent connection to the source of supply for installation in accordance with the manufacturer’s installation instructions. Products rated more than 50 kW are intended for installation in accordance with Chapters 1–8, and products rated 50 kW or less are intended for installation in accordance with Chapter 9 of ANSI/NFPA 853, “Installation of Stationary Fuel Cell Power Systems.”

REBUILT PRODUCTS

This category also covers stationary fuel cell power systems that are rebuilt by the original manufacturer or the original manufacturer’s authorized manufacturer also covered under this category. Rebuilt stationary fuel cell power systems are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt stationary fuel cell power systems are subject to the same requirements as new stationary fuel cell power systems, including production-line tests.

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic certified equipment specified in the markings or instructions.

PRODUCT MARKINGS

These products are marked to indicate the manufacturer’s name, model number, serial number, type of fuel required and required delivery pressure, fuel consumption at rated electrical output, input and output electrical ratings, and rated ambient temperature range.

Products intended for indoor installation only are marked “For Indoor Installation Only.” Products intended for indoor installation only are marked “For Indoor Installation Only.”

PRODUCT IDENTITY

The following product identity appears on the product:

Stationary Fuel Cell Power System
Stationary Fuel Cell Power System Accessory (for field-installed accessories).

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

RELATED PRODUCTS

This category does not cover any factory- or field-installed integral or interconnected equipment provided, such as an inverter, to change the fuel cell stack output voltage or frequency, or to serve as a utility interactive connection means. Products associated with this equipment for these purposes are covered under Static Inverters and Converters for Use in Independent Power Systems (IRK14).

ADDITIONAL INFORMATION

For additional information, see Fuel Cell Equipment (IRGN), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AARH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/CSA America FC 1, “Stationary Fuel Cell Power Systems.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuel Gas Booster” or “Fuel Gas Booster Compressor.”

FURNISHINGS (IYMR)

GENERAL

This category covers electrical (rated 600 V ac or less) and/or nonelectrical furnishings, and includes:

1. Motor-operated furniture, such as motor-operated beds and chairs, merchandise displays and furniture-mounted video support systems
2. Illuminated fixtures and fixtures for special effects, such as neon sculptures
3. Home and individual office furnishings, such as study carrels, consoles and desks
4. Commercial product and informational displays, such as shelving units, motorized carpet displays and product platforms
5. Electrified building components, such as windows
6. Other similar miscellaneous furnishings intended for use in dwelling units or commercial environments
FURNISHINGS (IYMR)

USE AND INSTALLATION

Products marked for household or residential use are intended to be used in dwelling units and guest rooms of hotels and motels. Hotel common areas such as the lobby or restaurant are considered commercial. Household or residential furnishings may be used in commercial settings, such as individual offices, where the number of people using the furnishings will be limited.

Products marked for commercial use are used where business is transacted, such as an office building, factory, warehouse, or similar location, and which is not a dwelling unit. These locations are where a large number of different people may be using the furnishings or are near the furnishings (such as customers near a display furnishing).

Products covered under this category are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

FACTORS NOT INVESTIGATED

The physiological or psychological effects on a person, beneficial or otherwise, which may be produced through the use of this equipment either singularly or with any other apparatus have not been investigated.

RELATED PRODUCTS

Office furnishings are covered under Office Furnishings (QAWZ).

Cord-connected multiple-outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps (XBYS).

Cord-connected multiple-outlet strips intended for permanent mounting (e.g., furniture power distribution units) are covered under Furniture Power Distribution Units (YINC).

Lighted display cases and cabinets used in commercial applications are covered under Wired Cabinets (ZNXR). Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated (AAVU).

Furnishings used for patient care are covered under Medical Equipment (PFDP).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, and the like are covered under Custom-built Kiosks (EMHH).

Furnishings intended for support of audio or video equipment and provided with casters or secured to the building structure are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV) or Carts, Tall Institutional (CZWK).

Portable lamps are covered under Luminaires, Portable (QOWZ) or Portable Cabinet Luminaries (QOVJ).

Decorative products intended for seasonal, temporary use such as lighted sculptures, molded figurines, and the like are covered under Outfits, Decorative (DGXW). Decorative lighting strings or electric ornaments intended for seasonal use are covered under Strings, Decorative Lighting (DGZZ) and Electric Ornaments (DGXC).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING COMPONENTS (IYMT)

GENERAL

This category covers building components, such as heated windows, electroluminescent windows, motorized structure-mounted mirrors, and nonmotorized structure-mounted shelving and shelving support systems.

For commercial units that (1) have a surface area greater than 10 sq. ft. and are intended to be adjacent to other furnishings, or (2) are greater than 20 sq. ft. and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These building components have not been investigated for use as components of fire-resistive assemblies.

These products are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

PRODUCT MARKINGS

These products are marked with the Listee’s name, trademark or UL File Number, a unique model designation, a date code, and any electrical rating.

Products intended for use only in dwelling units are marked “Household Use Only”; products intended for use only in commercial settings are marked “Commercial Use Only.” If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked “Suitable for Outdoor Use.”

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

- Articulated Mirror
- Building Component
- Electrified Glazing
- Heated Glazing
- Shelving System

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AAZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Building Component,” “Heated Glazing,” “Electrified Glazing,” “Shelving System” or “Articulating Mirror.”

********************

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL DISPLAYS (IYMX)

USE AND INSTALLATION

This category covers commercial merchandise displays, such as lighted and powered shelving units, luminary store displays, motorized rotating merchandise displays and motorized carpet flooring displays. A commercial display is a furnishing other than a showcase or cabinet that is used in a commercial establishment to display jewelry or similar merchandise. Commercial merchandise displays may be permanently connected or may be cord-and-plug connected with up to two power-supply cords. For commercial units that (1) have a surface area greater than 10 sq. ft. and are intended to be adjacent to other furnishings, or (2) units that are greater than 20 sq. ft. and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These products are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

PRODUCT MARKINGS

UL-certified commercial displays are marked “Certification of this Listed Commercial Display does not include the products that are on display.”

Products intended for use only in commercial settings are marked “Commercial Use Only.”

Products suitable for outdoor use are marked “Suitable for Outdoor Use.”

PRODUCT IDENTIFICATION

The following product identity appears on the product:

Commercial Display

RELATED PRODUCTS

Illuminated display showcases and cabinets used in commercial applications are covered under Wired Cabinets (ZNXR). Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated (AAVU).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like are covered under Custom-built Kiosks (EMHH).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AAZ).

UL MARK

The basic standard used to investigate products in this category is UL 962, “Household and Commercial Furnishings.”

2015-16 GUIDE INFORMATION FOR ELECTRICAL EQUIPMENT — THE WHITE BOOK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Commercial Display.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense, or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Decorative Furnishings (IYNA)

Use and Installation

This category covers furnishings intended to be used year-round (nonseasonal) that exist for aesthetic enjoyment or an ornamental purpose, such as lava lamps, low-wattage illuminated sculptures, glitter lamps, scrolly scenes, neon sculptures, strobe lamps, mirror balls, plasma lighting globes, motorized sculptures, optical fiber sculptures and wave machines.

These products are typically portable cord-and-plug connected but may be permanently connected.

These products are provided with use instructions and, if permanently connected, installation instructions are also provided.

These products are intended to be installed in accordance with ANSI/NFPA 72, “National Electrical Code.”

Product Markings

Products intended for use only in dwelling units are marked “Household Use Only.; products intended for use only in commercial settings are marked “Commercial Use Only.” Products intended for use in both dwelling units and commercial settings may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked “Suitable for Outdoor Use.”

Product Identity

The following product identity appears on the product:

Decorative Furnishings

Related Products

This category does not cover portable lamps (cord-connected portable luminaires (lamps), whose primary function is task or ambient illumination, and that can be moved to a new location without the use of tools). Tiffany-type portable lamps and similar lighted decorative lamps are portable lamps rather than a decorative furnishing. Portable lamps are covered under Luminaires, Portable (QQWZ) and Portable Cabinet Luminaires (QOV).

This category does not cover decorative outfits intended for seasonal, temporary use, not to exceed 90 days per year, providing a seasonal theme, such as wreaths, stars, tree-top units, sprays, light sculptures, molded figures, such as a pumpkin or a snowman, candles or candle sets without lamp shades, tree stands, and motorized decorative displays having illumination or other decorative effects. Decorative-lighting strings provided with lamp shades or diffusers over the lamps are also considered decorative outfits. Decorative outfits are intended for connection to a receptacle by means of an attachment plug and are portable. Seasonal, temporary use decorative products are covered under Outfits, Decorative (DCXW).

This category does not cover fountains. Fountains are covered under Fountains, Small Decorative (IQRW) or Architectural and Floating Fountains (AWEQ).

Additional Information

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Requirements

UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. FURNISHINGS (IYMR)

Furniture, Powered and Nonpowered (IYNE)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORIZED FURNISHINGS (IYNG)**

**GENERAL**

This category covers motor-operated furniture, such as nonpatient care beds, indirectly heated and cooled beds, and lift chairs. This category also covers video display mounts incorporated as part of a furnishing (CRT, plasma, LCD and the like) intended to rest directly on the floor without casters, wheels, etc.

These products are provided with installation and use instructions when intended for permanent connection.

These units are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

**PRODUCT MARKINGS**

Products intended for use only in dwellings are marked “Household Use Only”; products intended for use only in commercial settings are marked “Commercial Use Only.” If a product marking is not provided, the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked “Suitable for Outdoor Use.”

**PRODUCT IDENTITY**

The following product identity appears on the product:

- **Motorized Chair**
- Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use (CZUZ).

Furnishings supplied with all of the video and/or audio components by the manufacturer of those components are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) and Audio/Video Apparatus (AZSQ).

Furnishings used for patient care or an individual under medical care are covered under Medical Equipment (IYNE).

**ADDITIONAL INFORMATION**

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 962, “Household and Commercial Furnishings.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

- **Motorized Chair**
- Other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWERED TABLE SYSTEMS (IYNI)**

**USE AND INSTALLATION**

This category covers tables intended to be electrically interconnected with each other (two or more) and frequently reconfigured. These tables are provided with receptacles for communication, power and/or video connection. They are used in conference rooms, in an office, library, or school setting.

The surface burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less unless otherwise marked.

This category also covers powered table systems with powered tables connected to one 15 A, 120 V branch circuit, intended for use in unclassified locations in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC).

These units are provided with installation and use instructions, and are intended to be installed in accordance with the NEC.

**PRODUCT MARKINGS**

Finished surfaces having a flame spread rating of 200 or less and a smoke developed rating of more than 450 are marked “Smoke Developed Index Over 450.”

Each powered table system component (such as a table top or electrical accessory that is shipped separately from the major powered table unit to which it is to be connected) is identified with respect to its intended use and interrelationship with the powered table system (e.g., “For Use with Powered Table System Series ____”). If separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

These products are marked “Commercial Use Only.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- **Powered Table System**
- **Powered Table System Part for Use with [Company name] Powered Table System**

**ADDITIONAL INFORMATION**

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 962, “Household and Commercial Furnishings.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Powered Table System” or “Powered Table System Part for Use with [Company name] Powered Table System.”

- **Motorized Chair**
- Other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for all loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FURNITURE POWER DISTRIBUTION UNITS (IYNC)**

**USE AND INSTALLATION**

This category covers cord-and-plug-connected furniture power distribution units rated 250 V ac or less, 20 A ac or less, intended for indoor use when secured to a furnishing. Furniture power distribution units are intended for fixed mounting to furnishings as a power-supply connection for cord-and-plug-connected electrical utilization equipment.

A furniture power distribution unit is provided with an electrical enclosure with an attached power-supply cord and plug. The furniture power distribution unit is provided with a mounting means for attachment to a furnishing. The furniture power distribution unit may be provided with up to six lengths of flexible cord not exceeding six feet in length; each length is terminated with a maximum of three receptacle outlets within an electrical enclosure or three cord connectors (receptacle outlets).

Furniture power distribution units may be provided with suitable fuses or other supplementary overcurrent protection, switches and indicator lights singularly or in any combination. These units may also employ surge suppression components (TVSS), electromagnetic interference (EMI) filter components and/or uninterruptible power-supply components.

The furniture power distribution unit may be provided with USB (Universal Serial Bus) charging outlets and LED lighting when three or more receptacle outlets are provided.

These furniture power distribution units are intended to be directly connected to a permanently installed branch-circuit receptacle outlet. Furniture power distribution units are not intended to be series connected (daisy chained) to other furniture power distribution units, extension cords, or similar devices. The cords of these products are not intended to be routed through walls, windows, ceilings, floors or similar openings of buildings.
FURNITURE POWER DISTRIBUTION UNITS (IYNC)

Furniture power distribution units have not been investigated and are not intended for use with general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY

The following product identity appears on the product:

Furniture Power Distribution Unit

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Cord-connected multiple-outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps (XBY9).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962A, “Furniture Power Distribution Units.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Furniture Power Distribution Unit,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FURNISHINGS, HOUSEHOLD AND COMMERCIAL (IYQX)

USE

This category covers miscellaneous furnishings intended for use in homes and/or commercial establishments. These furnishings are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and the manufacturer’s markings and installation instructions.

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked “Household Use Only”; products intended for use only in commercial settings are marked “Commercial Use Only.” If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked “Suitable for Outdoor Use.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

Commercial Furniture Power Distribution Unit
Commercial PC Cabinet
Commercial Switchable Glass Door System
Household Mobile Work Station
Household Portable Electric Firework Lamp

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Furnishings intended for installation in building structures or equivalent locations are covered under Building Components (IYMT).

Furnishings intended for the display of merchandise are covered under Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Other types of furnishings are covered under Tables, Utility (WWJT) and Table Systems (IYNI).

Audio and video equipment mounting systems intended for mounting to walls, ceilings or another permanent part of a building are covered under Motor-operated Check-out Stands (DBNT).

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV).

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts, Tall Institutional (CZWK).

Furnishings with casters or wheels intended for use in retail stores to facilitate tally and packing operations are covered under Motor-operated Check-out Stands (DBNT).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, “Household and Commercial Furnishings.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUSED POWER-CIRCUIT DEVICES (YSR)

GENERAL

This category covers the following devices:

● Enclosed fused power-circuit devices in which the switch is integral with the enclosure
● Open-type fused power-circuit devices intended for mounting in other equipment, such as switchboards, or in a separately shipped enclosure
● Enclosures intended for mounting open-type fused power-circuit devices

These fused power-circuit devices are either bolted-pressure contact switches or high-pressure butt-type contact switches, each defined as follows:

Bolted-pressure contact switch — A device in which the blade-jaw connections have an additional pressure or clamping action provided at both ends of the switch blades when the blades are in the fully closed position.

High-pressure butt-type contact switch — A device having butt-type contacts and a spring-charged mechanism.

USE AND INSTALLATION

Fused power-circuit devices suitable for use as service switches are marked “Suitable Only for Use as Service Equipment.”

Some fused power-circuit devices incorporate neutrals factory bonded to the frame or enclosure. Such units are marked “Suitable Only for Use as Service Equipment.”

Purchased power-circuit devices marked for use at service may also be used to provide the main control and means of cutoff for a separately derived system, or for a second building.
Electrically tripped and/or operated fused power-circuit devices may be provided with ground-fault sensing and relaying equipment.

Devices suitable for ground-fault protection but the ground-fault protection sensors or relaying equipment (or both) are located in a separate enclosure are marked “Suitable for Ground Fault Protection When Combined with Class ____ (or Manufacturer and Cat. No.) Ground Fault Sensing Element” or the equivalent.

Devices for use with Class I ground-fault sensing and relaying equipment include those that are capable of interrupting 12 times their rated current or that have integral means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability.

Devices for use with Class II ground-fault sensing and relaying equipment are capable of interrupting 10 times their rated current and are intended for use in ground-fault protection systems where means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability are incorporated within the ground-fault sensing and relaying equipment.

Fused power-circuit devices have been investigated for connection to either busbars or pressure wire connectors. Unless the switch is marked “For busbar connection only” or the equivalent, it is provided with pressure wire connectors or marked for use with specific pressure wire connectors. Terminals are intended for use with copper conductors only unless the device is marked to indicate that terminals are also suitable for aluminum conductors.

Ratings

These devices accommodate Class L or T fuses rated 600 V or less (ac or dc) and have been investigated for use at 100% of their marked amperage. The continuous-current rating of a fused power-circuit device is 800, 1200, 1600, 2000, 2500, 3000, 5000, 6000 A.

These devices are intended for use on circuits having available fault currents of 100,000, 150,000 or 200,000 rms symmetrical amps or 20,000, 50,000, 100,000, 150,000 or 200,000 amps dc as indicated on the device.

Product Identity

One of the following product identities appears on the product:

- Enclosed Fused Power-circuit Device
- Enclosed Fused Power-circuit Device Suitable for Use as Service Equipment
- Fused Power-circuit Device
- Fused Power-circuit Device Enclosure

Additional Information

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Requirements

The basic standard used to investigate products in this category is ANSI/UL 977, “Fused Power-Circuit Devices.”

UL Mark

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

On fused power-circuit devices with integral enclosures the Certification Mark is applied to the enclosure. On devices for use in other enclosures (open type) the Certification Mark is applied to the switching unit.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Fused Power Circuit Device,” “Enclosed Fused Power-Circuit Device,” “Enclosed Fused Power-Circuit Device Suitable for Use as Service Equipment” or “Fused Power-Circuit Device Enclosure.”

On fused power-circuit devices with integral enclosures the Listing Mark is applied to the enclosure. On devices for use in other enclosures (open type) the Listing Mark is applied to the switching unit.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fuseholders (IYXV)

This category covers fuseholders intended for use with Class CC, G, H, J, K, R, T, special-purpose and supplementary cartridge fuses.

Fuseholders, Cartridge Fuse (IZLT)–Continued

A Class CTL (current-limiting) cartridge fuseholder has the physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, is designed to prevent the installation of more fuseholder poles than the number for which the assembly is designed and rated.

An interrupting rating on a fuseholder included in a piece of equipment does not automatically qualify the equipment in which the fuseholder is installed for use on circuits with higher available currents than the rating of the equipment itself.

Product Markings

Fuseholders are plainly and legibly marked to indicate:

1. The manufacturer’s name, trademark, or other descriptive marking by which the organization responsible for the product may be identified
2. The current and voltage ratings
3. The withstand rating in rms symmetrical amperes
4. The catalog number (or equivalent)

Fuseholders intended for Class G, J, R, T or CC fuses are marked “Use Class ___ fuses.”

Fuseholders with wiring terminals intended for use with copper and aluminum conductors are marked “USE COPPER OR ALUMINUM WIRE” or with the abbreviations “CU” and “AL.”

Fuseholders with terminals intended for copper wire only are marked “USE COPPER WIRE ONLY” (or “CU ONLY”). If the terminals are intended for aluminum wire only, the fuseholder is marked “USE ALUMINUM WIRE ONLY” (or “AL ONLY”).

Fuseholders rated 100 A having terminals intended to secure a maximum 1 AWG (42.4 mm²) conductor, if marked as being acceptable for aluminum wire, are also marked “FOR ALUMINUM USE NO. 1, 75C WIRE ONLY.”

Fuseholders are marked in a readily visible location to indicate the required temperature rating of all field-installed conductors.

Fuseholders are marked to indicate the specific tightening torque in pound-inches or pound-feet for each wire connector in the fuseholder that is intended for field wiring. If different connectors are used for line or load, the specific torques to be applied to each connector are clearly indicated. The torque marking may be provided in a written format or pictorially.

Class CTL cartridge fuseholders may be identified by the words “Class CTL” or “CTL” on the fuseholder as part of the marking.

Product Identity

One of the following product identities appears on the product:

- Cartridge Fuseholder
- Fuseholder

Related Products

For information regarding the use of fuses with interrupting ratings in equipment, see Cartridge Fuses, Nonrenewable (JDDZ).

Additional Information

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Requirements

The basic standard used to investigate products in this category is ANSI/UL 4248-1, “Fuseholders – Part 1: General Requirements,” in addition to one of the following as applicable:

- ANSI/UL 4248-4, “Fuseholders – Part 4: Class CC”
- ANSI/UL 4248-5, “Fuseholders – Part 5: Class G”
- ANSI/UL 4248-6, “Fuseholders – Part 6: Class H”
- ANSI/UL 4248-8, “Fuseholders – Part 8: Class J”
- ANSI/UL 4248-9, “Fuseholders – Part 9: Class K”
- ANSI/UL 4248-12, “Fuseholders – Part 12: Class R”

UL Mark

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuseholder” or “Cartridge Fuseholder.”

any loss, expense or damages, including incidental or consequential dam-
ages, arising out of or in connection with the use, interpretation of, or reli-
ance upon this Guide Information.

**FUSEHOLDERS, PHOTOVOLTAIC (IZMR)**

**GENERAL**

This category covers fuseholders intended for use with fuses for photovol-
tic systems.

An interrupting rating on a fuseholder included in a piece of equipment
does not automatically qualify the equipment in which the fuseholder is
installed for use on circuits with higher available currents than the rating of
the equipment itself.

**PRODUCT MARKINGS**

Fuseholders are plainly and legibly marked to indicate:
1. The manufacturer’s name, trademark, or other descriptive marking by
   which the organization responsible for the product may be identified
2. The current and voltage ratings
3. The withstand rating in dc amperes
4. The catalog number (or equivalent)
5. The statement “Use Photovoltaic Fuses”

Fuseholders with wiring terminals intended for use with copper and alu-
minum conductors are marked “USE COPPER OR ALUMINIUM WIRE” or
with the abbreviations “CU” and “AL”.

Fuseholders with terminals intended for copper wire only are marked
“USE COPPER WIRE ONLY” (or “CU ONLY”). If the terminals are
intended for aluminum wire only, the fuseholder is marked “USE ALUMI-
NUM WIRE ONLY” (or “AL ONLY”).

Fuseholders are marked in a readily visible location to indicate the
required temperature rating of all field-installed conductors.

Fuseholders are marked to indicate the specific tightening torque in
pound-inches or pound-feet for each wire connector in the fuseholder that is
intended for field wiring. If different connectors are used for line or load,
the specific torques to be applied to each connector are clearly indicated.
The torque marking may be provided in a written format or pictorially.

**PRODUCT IDENTITY**

The following product identity appears on the product:
Photovoltaic Fuseholder

**RELATED PRODUCTS**

For information regarding the use of photovoltaic fuses, see Fuses for Pho-
tovoltaic Systems (FJGA).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary
Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is
ANSI/UL 4248-1, “Fuseholders – Part 1: General Requirements,” in addition
to the requirements contained in UL Subject 4248-18, “Outline of Investiga-
tion for Fuseholders – Part 18: Photovoltaic.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by
UL to identify products manufactured under its Certification and
Follow-Up Service. The Certification Mark for this products includes the
UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identi-

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by
UL to identify products manufactured under its Listing and Follow-Up Ser-
vice. The Listing Mark for this products includes the UL symbol (as illus-
trated in the Introduction of this Directory) together with the word
“LISTED,” a control number, and the product name “Special Purpose Fuse-
holder.”

* * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not
assume or undertake to discharge any responsibility of the manufacturer or
any other party. UL shall not incur any obligation or liability for any loss,
expense or damages, including incidental or consequential damages, arising
out of or in connection with the use, interpretation of, or reliance upon this
Guide Information.

**FUSEHOLDERS, SPECIAL PURPOSE (IZND)**

**USE AND INSTALLATION**

This category covers fuseholders intended for use with certified special-
purpose fuses.

These fuseholders are designed for special-purpose applications. They
incorporate dimensional or other rejection features to prevent the installa-
tion of other certified classes of renewable and nonrenewable cartridge
fuses.

**PRODUCT MARKINGS**

Special-purpose fuseholders are marked with their voltage and current
rating. When the fuseholders are investigated for use in circuits capable of
delivering in excess of 10,000 rms symmetrical amps, fuseholders are
marked with their withstand rating. When not so marked, the withstand
rating is 10,000 A. A fuseholder marked for use in circuits capable of deliv-
ering in excess of 10,000 rms symmetrical amps does not qualify the equip-
ment in which it is installed for use in circuits with higher available cur-
rents than may be indicated by the equipment markings.

These fuseholders are designed for use with specific fuses, and are
marked with the manufacturer and catalog number of the fuse it is intended
to accommodate.

**PRODUCT IDENTITY**

The following product identity appears on the product:
Special-purpose Fuseholder

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary
Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is

**FUTTINGS FOR FUSEHOLDERS (IZZR)**

**GENERAL**

This category covers fuse reducers designed for use in cartridge fuse fuse-
holders to permit the insertion of fuses of smaller rating, Type S fuse adapt-
ers designed for use in Edison-base fuseholders to permit the insertion of
Type S fuses, and special adapters designed to permit the use of miscella-
neous plug fuses in Edison-base fuseholders to provide supplementary
overcurrent protection.

Fuse reducers are primarily intended for use with open fuseholders. The
use of fuse reducers in enclosed switches, panelboards, or other enclosures
may introduce a hazard due to reduced spacings. Consideration should be
given to spacings when fuseholders are used within enclosures.

**PRODUCT MARKINGS**

Fittings for fuseholders are plainly and legibly marked to indicate:
1. The manufacturer’s name, trademark, or other descriptive marking by
   which the organization responsible for the product may be identified
2. The current and voltage ratings
3. The catalog number (or equivalent)

**PRODUCT IDENTITY**

One of the following product identities appears on the product:
Fuse Adapter
Fuse Reducer
Fuseholder Fitting

Other product identities may be used as shown in the individual certifica-
tions.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary
Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is
ANSI/UL 4248-1, “Fuseholders – Part 1: General Requirements,” in addition
to one of the following as applicable:
ANSI/UL 4248-4, “Fuseholders – Part 4: Class CC”
ANSI/UL 4248-5, “Fuseholders – Part 5: Class G”
ANSI/UL 4248-6, “Fuseholders – Part 6: Class H”
ANSI/UL 4248-8, “Fuseholders – Part 8: Class I”
ANSI/UL 4248-9, “Fuseholders – Part 9: Class K”
ANSI/UL 4248-11, “Fuseholders – Part 11: Type C (Edison Base) and
Type S Plug Fuse”
Fittings for Fuseholders (IZZK) — Continued

ANSI/UL 4248-15, “Fuseholders – Part 15: Class T”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuseholder Fitting,” “Fuse Reducer” or “Fuse Adapter,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**FUSEHOLDERS, PLUG FUSE (JAMZ)**

**GENERAL**

This category covers fuseholders for Edison base and Type S fuses. Some of these fuseholders are intended for use in panelboards and may include separately certified snap switches. Fuseholders may be provided on a cover plate for mounting to outlet boxes. These fuseholders are provided with grounding means so that the plate can be grounded when installed on nonmetallic outlet boxes.

Class CTL plug fuseholders may be identified by the words “Class CTL” or “CTL” on the fuseholder as part of the marking.

Class CTL plug fuseholders have physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, are designed to prevent the installation of more fuseholder poles than the number for which the assembly is designed and rated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fuseholder
- Plug Fuseholder

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Fuseholders that are an integral part of a snap switch are covered under Snap Switches (WJQR).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ANSI/UL 4248-1, “Fuseholders – Part I: General Requirements,” and ANSI/UL 4248-11, “Fuseholders – Part 11: Type C (Edison Base) and Type S Plug Fuse.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuseholder Fitting” or “Plug Fuseholder,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

**FUSES (JCQR)**

**BRANCH-CIRCUIT FUSES (JCSA)**

This category covers fuses suitable to provide protection for branch and feeder circuits as defined by ANSI/NFPA 70, “National Electrical Code.” These fuses include:

- Cartridge Fuses, Nonrenewable (JDDZ)
- Cartridge Fuses, Renewable (IDRX)
- Plug Fuses (IEFV)

**Cartridge Fuses, Nonrenewable (JDDZ)**

This category covers nonrenewable cartridge-enclosed fuses, rated as follows:

- 250 V: 0 – 600 A
- 300 V: 0 – 1200 A
- 600 V: 0 – 6000 A

The fuse classes are further categorized as follows:

</table>

These fuses are intended for use on ac circuits only, unless also marked with a dc voltage rating. These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, “National Electrical Code.”

The term “current-limiting” indicates that a fuse, when tested on a circuit capable of delivering a specific short-circuit current (rms amps symmetrical) at rated voltage, will start to melt within 90 electrical degrees and will clear the circuit within 180 electrical degrees (1/2 cycle).

Because the time required for a fuse to melt is dependent on the available current of the circuit, a fuse that may be current-limiting when subjected to a specific short-circuit current (rms amps symmetrical) may not be current-limiting on a circuit of lower maximum available current.

Class K fuses incorporate dimensional features equivalent to, and are thus interchangeable with, Class H fuses.

Class R fuses incorporate features that permit their insertion into a Class H and K fuseholders. They are also provided with a feature that allows their insertion into rejection-type fuseholders designed to accept only Class RK1 or RK5 fuses.

All classes covered under this category (with the exception of Class H) are further classified as to their maximum peak let-through current (Iₚ) and maximum clearing ampere-squared seconds (F₁) as follows. These tables indicate the maximum permissible let-through values obtained when the fuse is connected to a circuit capable of providing the indicated available current.

**Maximum Peak Let-through Current (Iₚ, ampere) and Clearing F₁ (ampere-squared seconds)**

### PRODUCT MARKINGS

All devices covered under this category are marked with:
1. The manufacturer’s name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

Class K and R fuses investigated for use in protecting trailing cables for dc circuits in mines are marked “Mine Duty” and have an interrupting rating of 20,000 A, dc.

Equipment (a switch, motor starter, panelboard, etc.) investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

Fuses investigated for their current-limiting characteristics are marked “Current-limiting.”

Classes CD, CC, CF, G, H, J, K, L, R and T fuses may be marked “Time Delay,” indicating that they have a time-delay characteristic. This is the only designation that indicates the fuse has been investigated in accordance with the time-delay requirements of the standard.

Fuses that, in addition to meeting the requirements for nonrenewable cartridge fuses appropriate for the Class of fuse, also meet the requirements for photovoltaic fuses contained in UL Subject 2579, “Outline of Investigation for Low-Voltage Fuses – Fuses for Photovoltaic Systems,” are additionally marked with the letters “PV” or “gPV” or the text “Photovoltaic Fuse.”

### PRODUCT IDENTIFICATION

The following product identity appears on the product:
- Fuse

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 248-1, “Low-Voltage Fuses – Part 1: General Requirements,” in addition to one of the following:
- ANSI/UL 198M, “Mine-Duty Fuses”
- ANSI/UL 248-6, “Low-Voltage Fuses – Part 6: Class H Nonrenewable Fuses”
- ANSI/UL 248-8, “Low-Voltage Fuses – Part 8: Class J Fuses”
- ANSI/UL 248-12, “Low-Voltage Fuses – Part 12: Class R Fuses”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and...
Cartridge Fuses, Nonrenewable (JDDZ)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the line code name “Fuse.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cartridge Fuses, Renewable (JDRX)

GENERAL

This category covers renewable, cartridge-enclosed fuses, rated as follows:

<table>
<thead>
<tr>
<th>DC Rating</th>
<th>Interrupting Rating (kA)</th>
<th>Time Delay</th>
<th>Current-Limiting</th>
<th>Body Sizes</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0 – 600</td>
<td>Optional DC</td>
<td>10</td>
<td>No</td>
<td>6</td>
</tr>
<tr>
<td>600</td>
<td>Optional AC</td>
<td>10</td>
<td>No</td>
<td>6</td>
</tr>
</tbody>
</table>

These fuses are intended for use on ac circuits only unless also marked with a dc voltage rating.

These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, “National Electrical Code.”

Renewable fuses of a given voltage rating or current rating range are not interchangeable in the same fuseholder with fuses of a different voltage rating or current rating range.

Each line of renewable links has been investigated only with the same line of fuses from the same manufacturer.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer’s name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification
6. The word “Renewable”

In addition, each renewal element covered under this category is marked with:

1. The manufacturer’s name or trademark (or both)
2. The current rating
3. The voltage rating

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

These fuses may be marked with the designation “Time Delay,” indicating that they have a time delay characteristic. This is the only designation which indicates that the fuse has been investigated in accordance with the time-delay requirements of the Standard.

Equipment (a switch, motor starter, panelboard, etc.) that has been investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Fuse
Fuse Renewal

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

Plug Fuses (JEFV)

GENERAL

This category covers nonrenewable, Edison base, Type C and Type S plug fuses.

These fuses have the following characteristics:

<table>
<thead>
<tr>
<th>Interrupting Rating (kA)</th>
<th>Time Delay</th>
<th>Current-Limiting</th>
<th>Body Types</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type Edison base</td>
<td>0 – 30</td>
<td>Optional 10</td>
<td>3</td>
</tr>
<tr>
<td>Type C</td>
<td>125</td>
<td>Optional No</td>
<td>3</td>
</tr>
<tr>
<td>Type S</td>
<td></td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

PRODUCT MARKINGS

The devices covered under this category, at a minimum, are marked with:

1. The manufacturer’s name or trademark (or both)
2. The device current rating
3. Plug fuses designated as time-delay fuses are identified by the symbol “D” at least 1/8-in. in height, stamped, molded or printed in a location visible after installation of the fuse.

In addition, these devices are not marked “Current-limiting.” Devices rated 15 A or less have a prominent hexagonal feature.

PRODUCT IDENTITY

The following product identity appears on the product:

Fuse

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the line code name “Fuse.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DEFINED-USE FUSES (JDUU)

This category covers fuses intended for specific and defined use. These fuses include:
Cable Limiters (CYMT)

GENERAL
This category covers cable limiters of the nonrenewable type, rated 600 V maximum. These cable limiters are intended for use on ac circuits only, unless also marked with a dc voltage rating. They have a current interrupting rating of up to 200,000 rms symmetrical amperes. They are suitable for use with copper or aluminum cable when the wire terminals are so marked.

These cable limiters are intended for supplementary overcurrent protection. They are intended for use, where multiple wires per phase are used, to isolate an individual wire should it become faulted. They are not intended to be used as branch circuit or feeder protection and have not been investigated for those purposes. Similarly, they have not been investigated to determine their ability to provide overload protection or protection for cable and equipment connected to the load side of the cable limiter. They are not current limiting and will be marked as such.

PRODUCT MARKINGS
These devices are marked with the manufacturer’s name or trademark (or both), catalog number, voltage rating, interrupting rating (200,000 or 200 kA), and the cable size with “CU,” “AL” or “CU/AL” (as appropriate) following.

Those devices investigated and intended to be secured to conductors by crimping are additionally marked to identify the required crimp tool, die and number of crimps.

Unless marked to indicate otherwise, these devices are intended for use only in dry locations.

PRODUCT IDENTITY
The following product identity appears on the product:
Cable Limiter

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL2).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 248-1, “Low-Voltage Fuses—Part 1: General Requirements.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automotive Fuse” (or “Auto Fuse”).

* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fuses, Automobile (FHXT)

USE
This category covers glass-tube or blade-type fuses intended for use in automotive circuits of not more than 32 V.

PRODUCT MARKINGS
These devices are marked with the manufacturer’s or private labeler’s name or identifying symbol and the device amperage rating. The amperage rating may take the form of color coding in the case of blade-type fuses. Blade-type fuses are additionally marked to indicate the voltage rating. If the manufacturer produces fuses at more than one factory, each fuse carries a marking identifying the factory of manufacture.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Auto Fuse
Power Fuse

ADDITIONAL INFORMATION
For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS
The basic standard used to investigate glass-tube fuses in this category is UL 275, “Automotive Glass-Tube Fuses.”
Fuses for Photovoltaic Systems (JFGA)—Continued

Inverters intended for use in photovoltaic systems are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Wire modules and panels certified for the PV Global Approval Mark (GAP) as an extension of the CB Full Certification Scheme are covered under Photovoltaic Modules and Panels Certified for the PV GAP Mark (QMY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2579, “Outline of Investigation for Low-Voltage Fuses – Fuses for Photovoltaic Systems.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fuse for Photovoltaic Systems,” “Photovoltaic Fuse” (or “PV Fuse”) or “gPV.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Special-purpose Fuses (JFHR)

GENERAL

This category covers fuses rated 0 – 6,000 A, 0 – 1,000 V with interrupting ratings up to 300,000 A. These fuses are designed for special-purpose applications such as in combination with low-voltage power circuit breakers, in combination with TVSS devices or in combination with capacitors. If they do not incorporate dimensional or other rejection features that make them noninterchangeable with certified classes of renewable and nonrenewable fuses, then they have been investigated and found to comply with all of the performance requirements applicable to certified classes of renewable and nonrenewable fuses, but do not comply with any of the requirements applicable to a certified class of cartridge fuse. If they do comply with any of the performance requirements applicable to a certified class of cartridge fuse they may be marked “This fuse may substitute for a Listed Class ___ Fuse,” where the appropriate fuse class is placed in the blank.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer’s name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes (when not so marked, the interrupting rating is 10,000 A (rms symmetrical)
5. The words “Time Delay” (for qualifying fuses only)
6. The words “Current-limiting” (for qualifying fuses only)
7. These devices may also be marked to indicate if their performance is dependent upon the equipment with which they are designed to be used
8. Fuses that comply with all of the dimensional and performance requirements applicable to a certified class of cartridge fuse may be marked “This fuse may substitute for a Listed Class ___ Fuse,” where the appropriate fuse class is placed in the blank
9. Fuses that comply with all of the performance requirements applicable to a certified class of cartridge fuse but do not comply with any of the dimensional requirements for that fuse may be marked “This fuse meets the performance specifications for a Class ___ Fuse,” or the equivalent

PRODUCT IDENTIFY

The following product identity appears on the product:

Fuse

RELATED PRODUCTS

For classes of renewable and nonrenewable fuses, see Cartridge Fuses, Nonrenewable (JDDZ), Cartridge Fuses, Renewable (JDRX) and Plug Fuses (JEPV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 248-1, “Low-Voltage Fuses – Part 1: General Requirements.”

Look for the UL Mark on Product
**FUSES (JCQR)**

Special-purpose Fuses (JFHR) – Continued

UL Subject 248-18, “Outline of Investigation for Low-Voltage Fuses – Class CD Fuses”

UL 275, “Automotive Glass-Tube Fuses”

UL Subject 275A, “Outline of Investigation for Automotive Blade Type Fuses”

ANSI/UL 347, “High Voltage Industrial Control Equipment”

**FUSES, SUPPLEMENTAL (JDYX)**

This category covers supplemental fuses, which are also described as miscellaneous, miniature, and micro fuses. These fuses provide supplemental protection in end-use equipment to provide protection for components or internal circuits. They are not suitable for branch or feeder circuit use. Physical dimensions are not specified, but dimensional limitations apply to prevent insertion of supplementary protection fuses into branch or feeder circuit fuseholders intended to accommodate branch or feeder circuit fuses of the Class CA, CB, CC, CD, G, H, J, K, L, R or T Type.

**FUSE ACCESSORIES (JDVS)**

GENERAL

This category covers nonrenewable signal-indicating/alarm-actuating devices and fuse covers that are suitable for use with specific certified fuses. The combination is used for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, “National Electrical Code.”

These devices have a maximum rating of 1500 V ac. They are intended to be used with fuses with an interrupting rating of 10 kA rms or less unless specifically investigated for a higher rating.

Accessories are not intended to be used as branch circuit and service overcurrent protection or supplementary overcurrent protection.

These devices are intended to provide actuation of remote certified signaling devices, or to provide a visual indication that a fuse has opened.

**PRODUCT MARKINGS**

Products covered under this category are marked either on the device or on the smallest unit carton with the fuse amperage rating and the voltage rating of the fuse with which they are intended to be used.

Fuses covers may be designed so that they snap-fit onto the fuse body when the fuse is already installed, or they may be designed such that the fuse is installed in the cover before being inserted into the fuseholder. When the fuse cover is of the latter design, it is not intended to be used to remove a fuse under load, and it is marked “DO NOT OPERATE UNDER LOAD” or the equivalent.

**FUSE ACCESSORIES (JDVS) – Continued**

**FUSE COVERS**

These devices are intended to be used with certified branch-circuit fuses. They may be nonindicating, or may be provided with an electrical or electromechanical indicator that operates when a fuse has opened. Fuse covers are intended to provide additional protection against incidental contact with live parts of the fuseholder assembly. The fuseholders are not intended to be used in lieu of spacings in the equipment in which they are used.
## Fuses, Supplemental (JDYX)—Continued

Micro fuses are supplemental fuses with no principal dimension (length, width, height or diameter) exceeding 10 mm (excluding leads). The devices covered under this category are rated as follows:

<td>The words “Time Delay” or the letter “D” if device is a time delay type</td>
</tr>
</tbody>
</table>

If a color code is used to mark a micro fuse to designate voltage, interrupting rating or time delay type, the color code scheme is marked on the smallest package.

### Devices covered under this category are not marked “Current-limiting.”

One of the following product identities appears on the product:

- Micro Fuse
- Miniature Fuse
- Miscellaneous Fuse
- Supplemental Fuse

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

### REQUIREMENTS

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and one of the following product names as appropriate: “Supplemental Fuse,” “Miscellaneous Fuse,” “Miniature Fuse” or “Micro Fuse.”

**UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.**

### FUSES OVER 600 VOLTS (JEGER)

**GENERAL**

This category covers power and distribution fuses with voltage ratings above 600 V.

These fuses are intended to provide overcurrent protection in accordance with ANSI/NFPA 70, “National Electrical Code,” and are intended for installation in specific metal-enclosed switchgear.

These fuses are not intended to be interchanged with other manufacturers’ fuses or with other classes of certified fuses. Each fuse is intended to only be replaced with a fuse of the same manufacturer, type and ratings. The melting times at specified overcurrents are shown by each manufacturer’s published time-current curves, which may vary between manufacturers, and between fuse types and/or models.

Where used, the term “current-limiting” indicates a relationship between the cutoff (peak let-through) current to prospective available current, within the current-limiting range of the fuse, in accordance with characteristic curves published by the manufacturer. When operated within its current-limiting range, a current-limiting fuse introduces a high resistance to reduce current magnitude and duration, resulting in subsequent current interruption.

This category covers two major classes of fuses:

**Power class fuses** are generally used in three-phase applications, in substations, cabinets, or electrical vaults where a large amount of electrical power is being supplied to a distribution system. They are normally used where fault currents are high, X/R ratios are high, and/or severe transient recovery voltages (TRV) are anticipated.

**Distribution class fuses** are generally used in single-phase applications on a distribution line on single-phase taps or for protecting single-phase transformers. They are suitable for use in three-phase applications where the high capabilities of the power class fuse are not required.

Each of these classes is further subdivided into three types:

**Back-up current-limiting fuses** provide fault current interrupting duty only between their maximum interrupting rating and their minimum interrupting rating. They must be coordinated with other overcurrent protective device(s) which will interrupt below that level.

**Full range current-limiting fuses** are intended to interrupt any current between the minimum current that can cause melting of the fuse in not less than 1h. This current is their rated low current, which may be referred to as their rated minimum interrupting rating. They must be coordinated with other overcurrent protective device(s) which will interrupt below that level.

### E-rated Fuses

**Characteristics** — E-rated fuses are current-limiting power fuses in the voltage range of 2.8 kV through 38 kV, intended for use on ac circuits only. E-rated fuses may have either full range or general-purpose characteristics, as designated in the individual certifications. E-rated fuses have the following melting-time performance characteristics:
FUSES (JCQR) 267

Fuses Over 600 Volts (JEHE)−Continued

An E-rated fuse rated 100 A or less will melt in 300 seconds at an rms current within the range of 200 to 240% of its continuous current rating.

An E-rated fuse rated greater than 100 A will melt in 600 seconds at an rms current within the range of 220 to 264% of its continuous current rating.

The melting times at higher overcurrents are shown by each manufacturer’s published time-current curves, which may vary between manufacturers and between fuse types and/or models.

Markings — Each fuse is marked with the manufacturer’s name or trademark, manufacturer’s type or identification number, rated continuous current, rated maximum voltage, rated frequency, rated maximum interrupting current, and “E” following the continuous current rating (e.g., 100E).

General Purpose Fuses

Characteristics — General purpose fuses are current-limiting power fuses in the voltage range of 2.8 kV through 38 kV, intended for use on ac circuits only. General purpose fuses have general purpose characteristics only.

Markings — Each fuse is marked with the manufacturer’s name or trademark, manufacturer’s type or identification number, rated continuous current, rated maximum voltage, rated frequency, rated maximum interrupting current, and rated low current.

Fuse Links

Characteristics — Type K and Type T distribution fuse links are for voltages up to 38 kV, intended for use on ac circuits only.

Markings — Each link is marked with the manufacturer’s name or trademark, the manufacturer’s type or identification number, and rated continuous current, followed by the type identification.

PRODUCT IDENTIFICATION

One of the following product identities appears on the product:

E-rated Fuse
Fuse Link
General-purpose Fuse

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

In addition to the standards specified in items a and b above, the standard used to investigate general purpose current-limiting power fuses and E-rated fuses is ANSI C37.46 (2000), “American National Standard for High Voltage Explosion and Current-Limiting Type Power Class Fuses and Fuse Disconnecting Switches.”

In addition to the standards specified in items a and b above, the basic standard used to investigate fuse links is ANSI C37.42 (1996), “American National Standard Specification for High-Voltage Expulsion Type Distribution Class Fuses, Cutouts, Fuse Disconnecting Switches and Fuse Links.”

All fuses covered under this category are intended to be applied as specified in ANSI/IEEE C37.48 (1997), “IEEE Guide for Application, Operation, and Maintenance of High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories”.

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is marked on the fuse for E-rated and general-purpose fuses; the Certification Mark is marked on each package for fuse links, with or without the UL symbol on the fuse link.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “E-rated Fuse,” “General Purpose Fuse” or “Fuse Link.”

Fuses Over 600 Volts (JEHE)−Continued

The Listing Mark is marked on the fuse for E-rated and general purpose fuses; the Listing Mark is marked on each package for fuse links, with or without the UL symbol on the fuse link.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Product Markings**

Gas appliance electric accessories are marked with the company’s name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

**Product Identity**

The following product identity appears on the product:

Gas Appliance Electric Accessory

Other product identities may be used as shown in the individual certifications.

**Related Products**

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

**Additional Information**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**Requirements**

The basic standards used to investigate products in this category are ANSI/UL 1484, “Residential Gas Detectors.”

**UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Emergency Signaling Equipment” or “Emergency Signaling Subassembly.”

**Type Codes:**

E = Emergency Signaling Equipment

**Additional Information**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Gas Detectors, Residential and Recreational Vehicle (JKIS)**

**Use and Installation**

This category covers gas detectors intended to detect natural gas and LP-gas (propane) that may be present in residential buildings or recreational vehicles as a result of gas leaking from gas-fired equipment. These devices are intended to sound an alarm at or below 25% of the lower flammable limit of natural gas or LP-gas (propane).

**UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**GAS DETECTORS, RESIDENTIAL AND RECREATIONAL VEHICLE (JKIS)**

Installation limitations, if any, are marked on the device. Reference should also be made to the manufacturer’s installation and use instructions accompanying the product.

**Factors Not Investigated**

These devices have not been investigated for use as smoke or fire detectors.

**Product Identity**

One of the following product identities appears on the product:

- Emergency Signaling Equipment
- Emergency Signaling Equipment Subassembly
- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)

**Additional Information**

For additional information, see Equipment for Use in Ordinary Locations (AALZ).

**Requirements**

The basic standard used to investigate products in this category is ANSI/UL 1484, “Residential Gas Detectors.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Emergency Signaling Equipment” or “Emergency Signaling Subassembly.”

**Type Codes:**

E = Emergency Signaling Equipment

**Additional Information**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Gas and Vapor Detection Equipment for Use in Zone Classified Hazardous Locations (JLVV)**

**Use**

This category covers gas and vapor detectors and associated equipment used for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, “National Electrical Code,” or (3) intended for installation in panel assemblies in accordance with the instructions provided.

**Additional Information**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**Requirements**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.
### GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (JTNQ)

#### USE

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, “National Electrical Code”: Class I, Groups A, B, C and D; Class II, Groups E, F and G.

#### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

#### PRODUCT IDENTITY

The following product identity appears on the product:

- Enclosure for Use in Hazardous Locations

#### REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1203, “Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations.”

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS AS TO EXPLOSION AND FIRE HAZARD ONLY**

**Control No.**

### GAS AND VAPOR DETECTION EQUIPMENT CLASSIFIED FOR USE IN HAZARDOUS LOCATIONS (JTPD)

#### USE AND INSTALLATION

This category covers gas and vapor detectors and associated equipment designed for detecting specific gases and vapors that may be present in the atmosphere, incidental to operations or from accidental release, and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, “National Electrical Code,” or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These detectors have been investigated for risk of explosion, fire and electric shock only. They have not been investigated for performance relative to their ability to detect gases or vapors.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Combustible-gas Detector for Use in Hazardous Locations
- Combustible-vapor Detector for Use in Hazardous Locations
- Gas Detector for Use in Hazardous Locations
- Vapor Detector for Use in Hazardous Locations

The words “Hazardous Locations” may be abbreviated “Haz. Loc.” or “Haz. Locs.”

#### RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPA).

#### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

#### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### ADDITIONAL CERTIFICATION MARKINGS

Products covered under this category are additionally marked with the following information:

**AS TO EXPLOSION AND FIRE HAZARDS ONLY**
Gas and Vapor Detection Equipment Classified for Use in Hazardous Locations (JTPJ)—Continued

**PRODUCT IDENTITY** FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

"(COMBUSTIBLE) GAS DETECTOR OR (COMBUSTIBLE) VAPOR DETECTOR" (the word “Combustible” in the product identity is optional)

The words “Hazardous Locations” may be abbreviated “Haz. Loc.” or “Haz. Locs.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT LISTED FOR USE IN HAZARDOUS LOCATIONS (JTPX)

GENERAL

This category covers gas and vapor detectors and associated equipment intended for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, “National Electrical Code,” or (3) intended for installation in panel assemblies in accordance with the instructions provided.

Gas and vapor detectors in any of the groups under Class I hazardous locations have been tested with respect to safety of operation of the instrument in the presence of flammable and explosive mixtures of representative gases and vapors with air. The flame arresters provided in the intake and suction lines of these instruments have been tested in the presence of flammable and explosive mixtures representative of the gases and vapors that the instruments are designed to detect and of the hazardous locations for which the detector has been certified. Associated equipment may not necessarily be suitable for use in hazardous locations.

These instruments, when installed, maintained and operated in compliance with the manufacturer’s instructions, indicate the percentage of concentration or percentage of the lower flammable limits of the specific gases and vapors. In some cases, meter readings must be interpreted in accordance with calibration data furnished by the manufacturer.

Gas and vapor detectors should be calibrated and inspected by the operator in compliance with the manufacturer’s instructions, as performance of the instruments will depend on proper maintenance. The instruments should be calibrated with known gas- or vapor-air mixtures at intervals, and particularly after replaceable sensors incorporated in the detecting unit are replaced. Certain gases and vapors may adversely affect (poison) the sensors, and the use of the instruments in sampling atmospheres containing gases or vapors for which they have not been previously calibrated should, therefore, be avoided.

Minor variations in the flow of sample aspirated to the detecting unit do not affect the operation of these instruments to any great extent. However, as the instruments become inoperative in the event of clogging of sampling lines, flame arresters or filters, precautions should be taken to keep these components clean and free from obstructions. Where condensation of vapors occurs in the detecting unit, or in the sampling lines and fittings, erroneously low indications by the instrument may result. Absorption of appreciable amounts of certain gases and vapors by nonmetallic tubing used as sampling lines may also result in incorrect indications by the instrument.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Combustible-gas Detector for Use in Hazardous Locations
- Combustible-vapor Detector for Use in Hazardous Locations
- Gas Detector for Use in Hazardous Locations
- Vapor Detector for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ), in addition to ANSI/ISA-12.13.01, “Performance Requirements for Combustible Gas Detectors,” or ANSI/ISA-60079-29-1, “Explosive Atmospheres – Part 29-1: Gas Detectors – Performance Requirements of Detectors for Flammable Gases.”

**PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS**

An enclosed-type generator has the enclosure type designation marked on the generator for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The generator may also be marked “Rainproof.”

An open-type generator is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the generator, provided in the installation instructions, or as a stuffer sheet provided with the generator states that the generator may be enclosed.

Specifications for the enclosure are included with the instructions or marking.

**FIELD-EVALUATED PROVISIONS**

Suitability of guards for the shaft or other moving parts must be determined in the end-use application. If a generator does not have thermal protection as described above, protection needs to be provided in the end-use application such as an overload relay. The generator has a marking indicating that the generator is not provided with thermal protection.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Generator
- Electric Generator Head

RELATED PRODUCTS

Electric generators for use in marine applications are covered under Alternators (PQW), Generators and Motors, Electric, Marine (ARD). Electric generators for use in hazardous (classified) locations are covered under Gas Generators (PZG). Electric generators used in combination with an engine for use with recreational vehicles are covered under Engine Generators (FTSR).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1004-1, “Rotating Electrical Machines – General Requirements,” and ANSI/UL 1004-4, “Electric Generators.”

LOOK FOR THE UL MARK ON PRODUCT

GAS AND VAPOR DETECTION EQUIPMENT LISTED FOR USE IN HAZARDOUS LOCATIONS (JTPX)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “(Combustible) Gas Detector for Hazardous Locations” or “(Combustible) Vapor Detector for Hazardous Locations,” or other appropriate product name as shown in the individual Listings. The word “Combustible” in the product name is optional.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GENERATORS (JZGZ)

GENERAL

This category covers electric generators (also referred to as generator heads) capable of 40 kW or more continuous rated output. They are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

**PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS**

An enclosed-type generator has the enclosure type designation marked on the generator for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The generator may also be marked “Raintight” or “Rainproof.”

An enclosed-type generator is not intended to be installed in an enclosure unless a marking on the generator, the installation instructions, or a stuffer sheet provided with the generator states that the generator may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open-type generator is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the generator, provided in the installation instructions, or as a stuffer sheet provided with the generator.

A generator that has running heating and locked-rotor protection is marked “Thermally Protected.”

Generators are marked for use in a 40°C (104°F) or higher ambient.

All generators are provided with installation instruction information, which indicate the proper methods to secure the generator, electrically connect the generator to the prime mover, and connect it to the generator drive. The instructions also contain information concerning the load rating at which the generator can operate.

FIELD-EVALUATED PROVISIONS

Suitability of guards for the shaft or other moving parts must be determined in the end-use application. If a generator does not have thermal protection as described above, protection needs to be provided in the end-use application such as an overload relay. The generator has a marking indicating that the generator is not provided with thermal protection.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Now, please continue with the content from the image.

GROUND-FAULT CIRCUIT INTERRUPTERS (KCXS)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

A GFCI is a device whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in circuits where one of the conductors is solidly grounded.

Class A GFCIs trip when the current to ground has a value in the range of 4 through 6 mA. Class A GFCIs are suitable for use in branch and feeder circuits, including swimming pool circuits. However, swimming pool circuits installed before local adoption of the 1965 NEC may include sufficient leakage current to cause a Class A GFCI to trip.

GFCIs of the enclosed type that have not been found suitable for use where they will be exposed to rain are so marked.

The "TEST" and "RESET" buttons on the GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as "ON/OFF" controls of motors or other loads unless the buttons are specifically marked "ON" and "OFF." Products with "ON" and "OFF" markings have been additionally covered under Motor Controllers, Mechanically Operated and Solid-state (NMFT).

Receptacle GFCIs

Some GFCIs include flush receptacles and are intended to be installed in an outlet box for fixed installation on a branch circuit similar to a conventional receptacle.

Receptacle-type GFCIs for use in wet and damp locations in accordance with Articles 406 of the NEC are identified by the words "Weather Resistant" or the letters "WR" where they will be visible after installation with the cover plate secured as intended.

Weather-resistant-receptacle-type GFCIs installed in wet locations are intended to be installed within an enclosure that is weatherproof, whether or not the attachment plug cap is inserted.

Receptacle-type GFCIs intended for use with tamper-resistant receptacles are marked by the words "Tamper Resistant" or the letters "TR" located where they will be visible after installation with the cover plate removed.

Receptacle-type GFCIs that have additionally been found to meet appropriate receptacle requirements are marked "Hospital Grade" and/or "CO/ALR."

Receptacle-type GFCIs with receptacles rated 15 or 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors are suitable for through wiring on 20 A branch circuits.

The standard horsepower ratings for specific general-use receptacle configurations are also applicable to the receptacle portion of a GFCI employing the same receptacle configuration.

See Receptacles for Plugs and Attachment Plugs (RTRT) for further information.

Portable GFCIs

This category also covers portable GFCIs. These are plug-in type ground-fault circuit interrupters provided with male blades or an integral power-supply cord for connection to a receptacle outlet. Portable GFCIs are also provided with one or more receptacle outlets located on the GFCI or on a cord-connector body at the end of a length of flexible cord.

Only devices identified as "Portable GFCIs" are constructed so that either:

1. GFCI protection is also provided, or
2. the device interrupts power to the load, when any single supply conductor, including the neutral conductor, is opened. This feature maintains protection to the user in the event that conductor of a supply conductor is lost as a result of wear in the receptacle to which the device is connected, or if the integral power-supply cord to the GFCI is damaged.

Self-contained GFCIs

Self-contained GFCIs are provided with a complete enclosure intended to permanently attach to the mounting surface, and means of permanent connection to the supply conductors. They may be provided with one or more receptacle outlets or a means for permanent connection of the load conductors.

All self-contained GFCIs intended for installation in a counter are suitable for installation in a kitchen or bathroom countertop. They are provided with one or more receptacle outlets. The outlets may be fixed or retracted for storage below the counter surface.

REBUILT PRODUCTS

This category also covers rebuilt or refurbished portable GFCIs that are rebuilt or refurbished by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt or refurbished portable GFCIs are rebuilt or refurbished to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or refurbished portable GFCIs are subject to the same requirements as new portable GFCIs.

PRODUCT IDENTIFY

One of the following product identities appears on the product:

Ground-fault Circuit Interrupter
Portable Ground-fault Circuit Interrupter

For rebuilt products, the word "Rebuilt" or "Refurbished" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit-Interrupters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground-fault Circuit Interrupter."

For portable GFCIs, the word "Portable" precedes the product name.

For rebuilt products the word "Rebuilt" or "Refurbished" precedes the product name.

*SPECIAL-PURPOSE GROUND-FAULT CIRCUIT INTERRUPTERS (KCYC)

USE

This category covers ground-fault circuit interrupters (GFCI) for use in applications where equipment grounding is provided or is required by ANSI/NFPA 70, "National Electrical Code" (NEC), or where the voltage to ground is greater than 150 V.

PRODUCT CHARACTERISTICS

These GFCIs trip when the current to ground has a value in the range of 15 through 20 mA. Let-go protection is not provided by the GFCI; however, a person touching the protected equipment and earth would have a low-impedance equipment grounding path in parallel with the person's body.

These GFCIs rely upon equipment grounding for let-go protection. The reliability of the grounding circuit may be demonstrated by a system that monitors the grounding path to the service and to the load, such that an unacceptable increase in the resistance of the grounding path will cause the circuit to be opened, or by some other method that demonstrates, by
Special-purpose Ground-fault Circuit Interrupters (KCCY)—Continued

These GFCIs are divided into classes based upon voltage rating and the quality of the grounding circuit. Some may be used in circuits where grounding is not provided to the load but double insulation is provided. A Class C GFCI is intended to be used in circuits where voltage does not exceed 300 V AC to ground or conductor. Class D GFCIs are intended to be used in circuits where reliable equipment grounding or double insulation is provided or required by the NEC. A Class D GFCI is intended to be used in circuits where one or more conductors over 300 V to ground but where specified reliable equipment grounding, to provide a low impedance path so that the voltage across the body during a fault does not exceed 150 V, is provided for the protected equipment in the system.

The “TEST” and “RESET” buttons on GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as “ON” and “OFF” controls of motors or other loads unless the buttons are specifically marked “ON” and “OFF.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

Class C Ground-fault Circuit Interrupter, Special Purpose

Class D Ground-fault Circuit Interrupter, Special Purpose

Class E Ground-fault Circuit Interrupter, Special Purpose

RELATED PRODUCTS

For additional information, see Ground-fault Circuit Interrupters (KCCY) and Electrical Equipment for Use in Ordinary Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Class ___ Ground-Fault Circuit Interrupter, Special Purpose.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT CIRCUIT INTERRUPTERS FOR USE IN HAZARDOUS LOCATIONS (KCYN)

One of the following product identities appears on the product:

Ground Fault Circuit Interrupter for Use in Hazardous Locations

Ground Fault Interrupter for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 943, “Ground-Fault Circuit Interrupters.” The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ground Fault Circuit Interrupter for Use in Hazardous Locations,” or other appropriate product name as shown in the individual listings.

USE

This category covers ground-fault-current-sensing devices, relaying equipment, or combinations of ground-fault-current-sensing devices and relaying equipment which operates to cause a disconnecting means to function at predetermined values of ground-fault current in accordance with ANSI/NFPA 70, “National Electrical Code.” This equipment is intended for use on single-phase circuits rated 600 V maximum, or three-phase circuits rated 600 V maximum, phase to phase. This equipment is intended to provide ground-fault protection of equipment, services and feeders.

This equipment is intended to operate devices with shunt-trip coils, such as fused power-circuit devices, molded-case circuit breakers, molded-case switches and the like, which constitute the disconnecting means. It is necessary that ground-fault-sensing and relaying equipment be coordinated with a disconnecting device to prevent the disconnecting device from interrupting a fault current that exceeds the interrupting capability of the disconnecting means.

To aid the user in making the proper selection of disconnecting means and sensing and relaying equipment, the sensing and relaying devices are designated as Class I or Class II:

Class I ground-fault-sensing and relaying equipment does not incorporate means to prevent opening of a disconnecting device at any level of fault current. This Class is suitable for use with a disconnecting device that is capable of interrupting the maximum available fault current of the system on which it is used. Examples of such disconnecting devices are (1) circuit breakers or fused circuit breakers used within their interrupting ratings, (2) fused switches having integral means to prevent the switch from opening at levels of fault current exceeding the interrupting capability of the switch and thus permitting the fuses to clear the circuit, (3) fuses having an interrupting capability not less than 12 times which are capable of interrupting the levels of fault current that may exist before the fuses open.

Class II ground-fault-sensing and relaying equipment incorporates means to prevent initiation of opening of the disconnecting device if the fault current exceeds the contact interrupting capability of the disconnecting device with which it is intended to be used, such as in the case of a fused switch that does not have an interrupting capability of at least 12 times its amp rating.

This category covers enclosed equipment and also open-type equipment intended for use in certified equipment such as panelboards, switchboards and the like, where the acceptability of the combination has been determined by UL.

L@@K FOR THE UL MARK ON PRODUCT
GROUNDING AND BONDING EQUIPMENT (KDER)

Plate electrodes are bare or conductively coated iron or steel, or solid uncoated nonferrous metal (other than aluminum).

Plate electrodes are marked with the manufacturer’s name, trade name, or both.

Ground Clamps — Strap-type ground clamps are not suitable for attachment of the grounding conductor of an interior wiring system to a grounding electrode.

Ground clamps and other connectors suitable for use where buried in earth or embedded in concrete are marked for such use. The marking may be abbreviated “DB” (for “Direct Burial”).

Ground clamps are also suitable for telecommunications applications, such as telephone, radio, CATV and the like, in accordance with Articles 800, 810, 820 and Section 250.94 of the NEC, in addition to those covered under Grounding and Bonding Equipment, Communication (KDSH).

Ground clamps intended for use with ground rods and/or pipe electrodes in accordance with the NEC are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked “Copper Water Tubing,” or the equivalent, preceded or followed by the size of tubing. Ground rods, pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

Ground clamps intended for use with re-bar are marked with the size of re-bar which the clamp is intended. Re-bar sizes may be specified in fractions, such as 1/2, 5/8, etc., or a number, such as 3, 4, 5, etc., where the numerator represents the numerator of the fraction when stated in eighth-inch increments, e.g., 4 = 4/8.

Ground clamps intended for use on a brass hex fitting are marked “BF-X,” where “X” is replaced by a numeric number, fraction, or range of numbers representing the fitting size.

Grounding and Bonding Bushings — Bonding bushings for use with conduit fittings, tubing (ETM) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit as usually one or more set screws) for reliably bonding the bushing (and the conduit on which it is attached) to the metal equipment enclosure or box. They provide the electrical connectivity required by the NEC at service equipment and for circuits rated over 250 V. Means for connecting a grounding or bonding conductor are not provided and if there is need for such a conductor a grounding bushing should be used.

Grounding bushings for use with conduit fittings, tubing (ETM) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit have provision for the connection of a bonding or grounding wire or have means for mounting a wire connector available from the manufacturer. Such a bushing may also have means (usually one or more set screws) for reliably bonding the bushing to the metal equipment enclosure or box in the same manner that this is accomplished by a bonding bushing. Grounding bushings provide the electrical continuity required by the NEC at service equipment and for circuits rated over 250 V. They may be used with or without a bonding or grounding conductor as determined by the bonding or grounding function that is intended to be accomplished.

Insulating throat liners in grounding or bonding bushings are suitable for temperatures of 150°C if they are black or brown in color. Unless otherwise marked, insulating throat liners of any other color are suitable for temperatures of 90°C.

Grounding and Bonding Locknuts — Grounding and bonding locknuts serve in a manner similar to grounding and bonding bushings except they do not provide abrasion protection for the conductor at the end of the conductor.

Grounding and Bonding Hubs — Grounding and bonding hubs are certified hubs (see DWTT) provided with a certified grounding or bonding locknut. They serve in a manner similar to grounding and bonding bushings except they are only for use with threaded rigid metal and intermediate metal conduit. Grounding hubs provide the electrical continuity required by NEC 250.92 at service equipment and the electrical continuity required by NEC 250.97 for circuits rated over 250 V.

Ground Clips — Ground clips are intended to be pressed on the flat surface of a square, rectangular, or octagonal box to hold a grounding conductor against the sidewall of the box. Ground clips are not intended for use round boxes. Ground clips are typically used for connecting the grounding conductor of various wiring methods to outlet boxes or for connecting the bonding jumper from a receptacle, switch or other device to an outlet box.

Ground Mesh — The ground mesh consists of a copper wire mesh that is intended to be installed in ground or embedded in concrete and bonded to the grounding electrode system for the purpose of improving ground planes, such as an equipotential plane as described in Sections 547.2, 547.10 and 680.26 of the NEC. Ground mesh is not intended to serve as a required grounding electrode as described in Article 250 of the NEC.

Fittings — A fitting such as a hub, bushing or locknut intended to provide a raintight or liquidtight connection is marked “Raintight,” “Type 3,” “Type 3R,” “Type 4” or “Wet Locations.”
**GROUNDING AND BONDING EQUIPMENT (KDER)**

Water-meter Shunts — Consists of a 4 AWG or larger solid copper wire connected between two ground clamps that comply with requirements for such ground clamps.  

**Grounding Couplings** — Grounding couplings are certified rubber-gasketed fittings (see VIZM) that have been additionally investigated for grounding/bonding in a 200 A maximum service-entrance capacity. Exothermic Welding Systems — Exothermic welding connection systems consist of molds and materials needed to connect grounding conductors and bonding jumpers to other applicable parts by a process known as exothermic welding.  

**Miscellaneous Devices** — Grounding and bonding equipment not specifically mentioned above, such as bonding locknuts, gaskets, grounding wedge lugs, adapters, grounding grids and the like, are investigated under the intent of the requirements in the standard.  

**PRODUCT MARKINGS**  
Some of the markings referred to above may be on a tag attached to the product.  

- **Grounding and bonding devices are intended for use only with copper conductors unless they are marked “AL” or “AL-CU.”**  

**PRODUCT IDENTITY**  
One of the following product identities appears on the product:  
- Bonding Equipment  
- Bonding Jumper  
- Ground Clamp  
- Grounding Equipment  
- Other product identities may be used as shown in the individual certifications.  

**RELATED PRODUCTS**  
Hospitals ground jacks and grounding cord assemblies are covered under Hospital Ground Jacks and Grounding Cord Assemblies (KEVX). Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication (KDSH).  

**RELATED PRODUCTS**  
Grounding and bonding hubs may additionally be covered as a hub under Conduit Fittings (DWT). Swimming pool equipmentbonding kits that are only intended to provide an intentional conductive bond to the pool water in accordance with Section 680.26(C) of the NEC are covered under Swimming Pool and Spa Equipment, Miscellaneous (WDUT).  

**Grounding couplings are additionally covered under Fittings, Rubber Gasketed (VIZM).**  

**Grounding and bonding equipment intended for use in PV systems is investigated in combination with the PV module/panel (see Photovoltaic Modules and Panels [QIGU]) to the applicable requirements for such products. Installation instructions provided with the PV system (see QIGU) identify the specific grounding and bonding device that has been investigated and intended for use with that system.**

**GROUNDING AND BONDING EQUIPMENT, COMMUNICATION (KDSH)**

**USE**  
This category covers grounding devices intended for use in telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Articles 770, 800, 810, 820, 830 and Section 250.94 of ANSI/ NFPA 70, “National Electrical Code” (NEC).  

**Strap-type Ground Clamps** — Strap-type ground clamps constructed of perforated or expanded metal are suitable for grounding conductor connections to electrodes for indoor telecommunications purposes only. Where permitted by the NEC, they are also suitable in both indoor and outdoor applications when used for bonding purposes only. Strap-type ground clamps are intended for use with pipe electrodes in accordance with the NEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked “Copper Water Tubing” or the equivalent, preceded or followed by the size of tubing. Pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.  

**Protector Grounding Conductors** — Protector grounding conductors are intended for the grounding of metallic members of a cable sheath or of a primary protector. The conductor may be copper, aluminum, copper-clad aluminum or copper-clad steel. They have a light olive gray or green covering of thermoplastic material having a thickness less than certified wire and are surface marked with the manufacturer’s name, conductor size, temperature rating and the words “Protector Grounding Conductor.” The tag, reel or carton is marked with the same information and additionally provides information such as material of the conductor, identified use to NEC 770, 800, 810, 820 and 830 applications, and any auxiliary information.  

**Intersystem Bonding Terminations** — Devices that provide a means for connecting communications systems grounding conductors and bonding conductors at the service equipment or at the disconnecting means for buildings or structures supplied by a feeder or branch circuit.  

**CUT-BY-BUILDINGS** — An assembly usually consisting of CATV connector mounted on a plate together with a means of terminating a grounding or bonding conductor to the metal plate. There is no signal filtering or conditioning at the CATV connection.  

**PRODUCT MARKINGS**  
Some of the required markings may be on a tag attached to the product.  

**PRODUCT IDENTITY**  
One of the following product identities appears on the product:  
- Ground Clamp – Comm  
- Ground Clamp – Communication  
- Intersystem Bonding Termination Ground Clamp  
- Protector Grounding Conductor  
- Other product identities may be used as shown in the individual certifications.  

**RELATED PRODUCTS**  
Strap-type ground clamps covered under Grounding and Bonding Equipment (KDER) are also suitable for use in applications as specified in this category.  

**ADDITIONAL INFORMATION**  
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

This equipment, unless otherwise indicated, is for installation in unclassified (ordinary) areas of health care facilities.

ULD, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOSPITAL GROUND JACKS AND GROUNDING CORD ASSEMBLIES (KEVX)**

**USE**

This category covers hospital ground jacks and grounding cord assemblies intended for use in hospital rooms or other in health care facilities.

**PRODUCT MARKINGS**

The cover of a hospital grounding jack having a twist-to-lock configuration is marked “Locked – for Grounding” or “Twist to Lock – for Grounding.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Grounding Cord Assembly

Grounding Jack

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Grounding and Bonding Equipment covered under Grounding and Bonding Equipment (KDER).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment (KDSH).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 467, “Grounding and Bonding Equipment.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Neutral Grounding Resistor” or “Neutral Grounding Reactor” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

This category covers appliances, utilization equipment and construction materials which have been judged to be particularly applicable to a health care facility as defined by Article 517 of ANSI/NFPA 70, “National Electrical Code.”

The general information under the specific categories indicate the areas in which the individual Listings are intended to apply in health care facility installations.

**GROUNDING EQUIPMENT, NEUTRAL GROUNDING DEVICES, OVER 600 VOLTS (KDZC)**

**GENERAL**

This category covers neutral grounding devices intended for use on systems having ac voltage ratings from 601 V to 38 kV. Neutral grounding devices are used for the purpose of controlling the ground current or the potentials to ground of an alternating-current system.

These devices are grounding transformers, ground-fault neutralizers, reactors, capacitors, or a combination of these. In addition, these devices may include current sensors, relays, audible and visual signaling and similar accessories.

**PRODUCT MARKINGS**

Devices suitable for outdoor use are marked “Outdoor.”

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked “Category A” are intended to be installed in areas accessible to the unsupervised general public; enclosures marked “Category B” are intended to be installed in areas accessible to authorized personnel only; enclosures marked “Category C” are intended for use in areas accessible to qualified personnel only.

Devices covered under this category are marked with the following information: Name of manufacturer, serial number, name of device, type designation, impedance (except resistors), number of phases as applicable, rated current, rated frequency, rated time, rated voltage, Bil of line, indoor or outdoor service, weight, volume of oil (if applicable), instruction book number or equivalent.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Neutral Grounding Reactor

Neutral Grounding Resistor

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Neutral Grounding Resistor” or “Neutral Grounding Reactor” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOSPITAL GROUND JACKS AND GROUNDING CORD ASSEMBLIES (KEVX)**

**USE**

This category covers hospital ground jacks and grounding cord assemblies intended for use in hospital rooms or other in health care facilities.

**PRODUCT MARKINGS**

The cover of a hospital grounding jack having a twist-to-lock configuration is marked “Locked – for Grounding” or “Twist to Lock – for Grounding.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Grounding Cord Assembly

Grounding Jack

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

General equipment for grounding and bonding is covered under Grounding and Bonding Equipment (KDER).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment (KDSH).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 467, “Grounding and Bonding Equipment.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Grounding Jack” or “Grounding Cord Assembly,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ISOLATED POWER SYSTEMS EQUIPMENT (KEWV)**

**GENERAL**

This category covers isolated power centers that incorporate complete assemblies of isolation transformers and one or more isolated secondary circuits terminated in integrally mounted grounding-type load receptacles in an overall enclosure, which are intended for use in health care facilities where it is considered desirable to minimize available leakage and short-circuit currents.

Line isolation monitors may be included in the assembly to indicate the “condition” of the isolated circuit and its connected components with respect to electrical ground.

Other distribution panels certified as isolated power panelboards incorporate the same features as described above except that they may be supplied with power from a separate isolation transformer. They are connected by an approved wiring method to remote receptacles located in operating rooms or other anesthetizing location areas of health care facilities.
Isolated Power Systems Equipment (KEWV)—Continued

This category also covers accessory equipment, such as terminal assemblies located in patient care areas.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Isolated Power Systems Equipment (KEWV).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirement used to investigate products in this category is ANSI/UL 1047, “Isolated Power Systems Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Isolated Power Systems Equipment.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### ISOLATED POWER WALL MODULES (KEXS)

This category covers isolated power wall modular sections for use in, within, or as part of health care facilities, and may be part of a building structure. They are designed for permanent connection to the building wiring in accordance with Article 517 of ANSI/NFPA 70, “National Electrical Code” (NEC).

These sections incorporate factory-installed wiring and equipment comprising part of an isolated power system such as the components of an isolated power center or an isolated power panelboard, or accessory equipment such as terminal assemblies located in patient care areas. In addition, they may incorporate various combinations of gas outlets, lighting fixtures, elapsed-time indicators, clocks, intercommunication equipment, etc.

These sections do not contain any grounded power systems except those necessary for connection to the primary of an isolated transformer, if provided. Sections intended for use with grounded power systems are covered under Sections and Units (QQXX).

The pre-installed components and wiring of a prefabricated section may be concealed and, except for the branch-circuit connections, may not be accessible for inspection at the inspection site.

The isolated power wall module sections have not been investigated to determine conformance with one or more model building or plumbing codes. They have been investigated to determine compliance with the NEC. These wall modular sections are intended for installation subject to approval by the Authority Having Jurisdiction.

The maximum available leakage current to the enclosure and primary grounded circuit conductor from either isolated circuit conductor has been investigated to determine that it is less than 100 microamperes with no loads connected to the isolated circuit.

Fire hazard classification of the building materials used in the wall module sections, including the resistance of any plywood to delamination under fire exposure, has been investigated. The fire hazard classification of the building materials used in prefabricated assemblies has the following maximum ratings applied to the finished panel and to core material (if used) in comparison with asbestos cement boards as zero and untreated red oak lumber as 100:

- **Flame-spread rating**: 75
- **Smoke-developed rating**: 200

**PRODUCT IDENTITY**

The following product identity appears on the product:

Isolated Power Wall Module

**RELATED PRODUCTS**

See Isolated Power Systems Equipment (KEWV).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, “National Electrical Code.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### PREFABRICATED MEDICAL HEADWALLS AND MEDICAL SUPPLY UNITS (KEZV)

**USE**

This category covers prefabricated medical headwalls and medical supply units that are factory-built assemblies for use in, within, or part of health care facilities, and may be part of a building structure. These assemblies may incorporate pre-installed materials and certified equipment which is usually concealed and may not be accessible for inspection at the installation site. The certified equipment incorporated in these assemblies includes, but is not limited to, receptacles, switches, clocks, timing devices, patient monitors, vacuum stations and gas fittings. These assemblies, including any field wiring for units that are not factory wired, are intended for installation subject to approval by the Authority Having Jurisdiction.

**INSTALLATION CODES**

Materials, including the methods used for the installation of electrical, mechanical, heating, and plumbing equipment included in these assemblies by the manufacturer of the assemblies, have been judged under UL requirements which are based on the National Electrical Code, National Fire Code, and Model Building, Plumbing and Mechanical Codes.

**RATINGS**

The fire hazard of building materials employed in the assemblies is judged to be no greater than that of ordinary lumber used in site-constructed buildings. Finished surfaces are of materials having flame-spread and smoke-developed ratings of 200 or less. Products with a rating less than 200 indicated in the individual certifications may be included as part of the product marking.

Structural requirements vary with type of building construction and occupancy, and stability is a large measure dependent upon the attachment of the assemblies to field-erected or existing structures. Therefore, Authorities Having Jurisdiction should be consulted with respect to local requirements.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- **Dental Unit**
- **Medical Headwall**
- **Medical Supply Unit**

Other proprietary descriptive product identities with further description where necessary may be used as shown in the individual certifications.

**RELATED EQUIPMENT**

Prefabricated assemblies for use in locations other than health care facilities are covered under Prefabricated Assemblies, Sections and Units (QQXX) and Wiring Assemblies (QQYZ).

**ADDITIONAL INFORMATION**

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, “National Electrical Code.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

One Certification Mark is applied to each assembly.
Prefabricated Medical Headwalls and Medical Supply Units (KEZR) − Continued

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name, such as “Medical Headwall,” “Medical Supply Unit,” “Dental Unit,” or proprietary descriptive product name with further description where necessary. One Listing Mark is applied to each assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL WASTE DISPOSAL SYSTEMS, EQUIPMENT AND ACCESSORIES (KFCC)

GENERAL

This category covers products that neutralize or collect biological or medical waste as indicated by the manufacturer. These products are intended for use in hospitals, nursing homes, medical care centers, medical and dental offices, and similar professional health care facilities. They include, but are not limited to syringe destroyers, waste disposers and similar equipment.

Approval to market these products in the United States is regulated by the Federal Food, Drug, and Cosmetic Act, P.L.94-295, and 21CFR, Parts 800-895. UL’s investigation is, therefore, limited to investigation as to electrical shock, fire and mechanical hazards only. The environmental impact and health aspects associated with the use of these products and their ability to collect, identify, or neutralize biological and medical waste have not been investigated. The limitation is specified in the instruction manual for all products covered under this category.

Unless otherwise noted, these products have not been investigated for use in the presence of flammable materials. Equipment which has been investigated to determine its suitability for use in hazardous (classified) locations as defined by ANSI/NFPA 70, “National Electrical Code,” may be found under the individual hazardous locations product categories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Macerator
Syringe Destroyer
Waste Disposer

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AAAL).

REQUIREMENTS

Equipment intended for household use is also investigated to the applicable requirements in UL 1431, “Personal Hygiene and Health Care Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES (KFCG)

GENERAL

This category covers indoor-use power supplies having input ratings not more than 600 V, direct and alternating current, intended for use with professional medical and dental equipment in ordinary locations of health care facilities in accordance with ANSI/NFPA 70, “National Electrical Code.”

Power supplies not provided with standard output receptacles are marked for use with the intended end-use equipment, the combination of which has been investigated for compliance with the relevant standards of this category as noted below. Consideration should be given for the combination of products to be investigated under Medical Equipment (PIDF).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

FACTORS NOT INVESTIGATED

These products have not been investigated for the effects they may have on the systems or the equipment to which they are connected.

PRODUCT IDENTITIES

One of the following product identities appears on the product:

Dental Power Conditioner
Dental Power Supply
Health Care Facility Power Conditioner
Health Care Facility Power Supply
Hospital Power Conditioner
Hospital Power Supply
Medical Power Conditioner
Medical Power Supply

Other product identities may be used as shown in the individual certifications, precended by “Hospital,” “Health Care Facility,” “Medical” or “Dental,” as appropriate.

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

RELATED PRODUCTS

Power supplies not provided with standard output receptacles and not marked for use with intended end-use equipment are covered under Power Supplies, Medical and Dental (QHM2).

Power supplies intended to isolate the secondary output from ground are covered under Isolated Power Systems Equipment (KEIV).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AAAL).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1012, “Power Units Other Than Class 2,” and UL 544, “Medical and Dental Equipment,” or UL 60601-1, “Medical Electrical Equipment, Part 1: General Requirements for Safety.”

Some certifications are based on UL 544 or UL 2601-1, “Medical Electrical Equipment, Part 1: General Requirements for Safety.”

Medical Waste Disposal Systems, Equipment and Accessories (KFCC) − Continued

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PRODUCT IDENTITIES

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

Control No. 6666666666666666666

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, and the product name "TV," "TV Stand," etc., preceded by "Hospital," "Health Care Facility," "Medical," or "Dental," as appropriate.

For rebuilt products, the word "Rebuilt," "Reconditioned" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEVISION/VIDEO EQUIPMENT FOR USE IN HEALTH CARE FACILITIES (KFCV)

GENERAL

This category covers power-operated television and video equipment intended for entertainment purposes in unclassified locations of health care facilities. Equipment suitable for use in oxygen-enriched atmospheres is so indicated in the individual certifications.

Entertainment centers consisting of combinations of a television receiver and a radio receiver and/or other audio or video equipment are investigated to the requirements for television equipment.

This category also covers accessory equipment, including carts, stands, supporting arms and/or wall-mounting brackets, intended for use with television and video equipment in health care facilities.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Health Care Facility TV
- Health Care Facility TV Stand
- Hospital TV
- Hospital TV Stand

Other product identities may be used as shown in the individual certifications, preceded by "Hospital," "Health Care Facility," or "Medical Uninterruptible Power Supply" preceded by "Hospital," "Health Care Facility," or "Medical," as appropriate.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1492, "Audio-Video Products and Accessories," or UL 6500, "Audio/Video Apparatus for Commercial, Institutional and Medical Use," or ANSI/UL 60605, "Audio, Video and Similar Electronic Apparatus—Safety Requirements." UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, and the product name "TV," "TV Stand," etc., preceded by "Hospital," "Health Care Facility," or "Medical Uninterruptible Power Supply" preceded by "Hospital," "Health Care Facility," or "Medical," as appropriate.

For rebuilt products, the word "Rebuilt," "Reconditioned" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES (KFFG)

USE

This category covers indoor-use uninterruptible power supplies that may be portable, stationary or fixed. The equipment is rated not more than 600 V ac, and is intended for use with professional medical and dental equipment in health care facilities in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

An uninterruptible power supply is used to provide alternating-current power to a load for a period of time marked on the unit in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

Uninterruptible power supplies provided with nonstandard output receptacles are marked for use with the intended end-use equipment.

Unless marked "Essential Electrical System," these uninterruptible power supplies have not been investigated with respect to the requirements for essential electrical systems as defined in Article 517 of the NEC.

REBUILD PRODUCTS

This category also covers uninterruptible power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt uninterruptible power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt uninterruptible power supplies are subject to the same requirements as new uninterruptible power supplies.

FACTORS NOT INVESTIGATED

The investigation of a product covered under this category does not include any factors it may have on the system or equipment to which it is connected.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- "Hospital" or "Health Care Facility TV"
- "Hospital" or "Health Care Facility TV Stand"
- "Medical Uninterruptible Power Supply" or "Dental Uninterruptible Power Supply"
- "Hospital Medical Uninterruptible Power Supply"
- "Medical Uninterruptible Power Supply"

For rebuilt products, the word "Rebuilt," "Reconditioned" or "Reconditioned" precedes the product name.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1778, "Uninterruptible Power Supply Equipment," and UL 60601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

- The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, and the product name "TV," "TV Stand," etc., preceded by "Hospital," "Health Care Facility," or "Medical Uninterruptible Power Supply" preceded by "Hospital," "Health Care Facility," or "Medical," as appropriate.

For rebuilt products, the word "Rebuilt," "Reconditioned" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

HEATERS, AIR FOR USE IN HAZARDOUS LOCATIONS (KVR)

GENERAL

This category covers air heaters of the natural convection, radiant heating, and fan-assisted types. Heaters for surface mounting are intended to be installed in a horizontal position and should not be recessed, obstructed, or placed on or under shelves. Installation is intended to be in accordance with the instructions furnished with the heater.

PRODUCT IDENTITY

LOOK FOR THE UL MARK ON PRODUCT
HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

The following product identity appears on the product:

Air Heater for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Air Heater for Hazardous Location.”

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL RESISTANCE HEAT TRACING CABLE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (KGFR)

USE

This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual certifications.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Heat Tracing Cable Set for Use in Hazardous Locations
- Heat Tracing Cable System for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Heat Tracing Cable Set for Use in Hazardous Locations” or “Heat Tracing Cable System for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN HAZARDOUS LOCATIONS (KGIZ)

GENERAL

This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual certifications.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, “National Electrical Code,” must be observed in installation or use, the necessary instructions are marked on the equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Industrial and Laboratory Heater for Use in Hazardous Locations
- Laboratory Heater for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, “Electric Heaters for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Industrial and Laboratory Heater for Use in Hazardous Locations,” “Industrial Heater for Use in Hazardous Locations” or “Laboratory Heater for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS (KGWX)

GENERAL

This category covers miscellaneous heaters, including immersion heaters, motor-enclosure space heaters, and heaters for compressed air and water hose reels.

PRODUCT IDENTITY

The following product identity appears on the product:

- Heater for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, “Electric Heaters for Use in Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name “Heater for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE HEATERS FOR USE IN HAZARDOUS LOCATIONS (KHCM)

USE
This category covers surface heaters intended for pipeline or vessel heating.

PRODUCT IDENTITY
The following product identity appears on the product:
Surface Heater for Use in Hazardous Locations

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Surface Heater for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KHTG)

Electrical Resistance Heat Tracing Cable Systems for Use in Zone Classified Hazardous Locations (KHIP)

USE
This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual certifications.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Heat Tracing Cable Set for Use in Hazardous Locations
Heat Tracing Cable System for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol and the word “LISTED,” a control number, and the product name “Heat Tracing Cable Set for Use in Hazardous Locations” or “Heat Tracing Cable System for Use in Hazardous Locations,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KIBV)

GENERAL
This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual certifications.

INSTALLATION
In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/UL 508, “National Electrical Code,” must be observed in installation or use, the necessary instructions are marked on the equipment.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Industrial and Laboratory Heater for Use in Hazardous Locations
Industrial Heater for Use in Hazardous Locations
Laboratory Heater for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION
For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AAIZ).

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial and Laboratory Heater for Use in Hazardous Locations,” “Industrial Heater for Use in Hazardous Locations” or “Laboratory Heater for Use in Hazardous Locations,” or other appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS AND HEATING EQUIPMENT (KKBV)

This category covers equipment rated up to 600 V intended for household, industrial or commercial installations.
These products have not been investigated for outdoor use unless they are marked “For Outdoor Use” or the equivalent, in which case they are acceptable for both outdoor and indoor use.

**AIR HEATERS, MOBILE AND WALL OR CEILING HUNG (KKPT)**

**USE AND INSTALLATION**

This category covers cord-and-plug-connected air heaters of the natural convection and fan-assisted movable types, wall-hung (other than at the baseboard level), and ceiling-hung types.

Movable and wall- or ceiling-hung heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area.

Some movable and wall- or ceiling-hung heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. In accordance with product markings and instructions for the user, such heaters should be placed so as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Use that does not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain air heaters subjected to the equivalent of a beating rain are considered to be acceptable for outdoor installation and are marked “Outdoor Use.”

**PRODUCT IDENTIFY**

One of the following product identities appears on the product:

- Ceiling-hung heater
- Movable floor-mounted air heater
- Movable heater
- Movable radiant glass heater
- Wall- or ceiling-hung heater
- Wall-hung heater

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Fixed and location-dedicated electric room heaters are covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

Permanently-mounted heaters having provisions for drawing in outside air are certified as room fan heater units under Heating and Cooling Equipment (LZFE).

Portable baseboard heaters and accessories are covered under Baseboard Heaters (KLDR) and Baseboard Heater Accessories (KLQZ), respectively.

These heaters have not been investigated for their acceptability when used in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications. Steam and dry-bath units are covered under Steam Bath Equipment (KQDB).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1278, “Movable and Wall- or Ceiling-Hung Electric Room Heaters.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Movable Heater,” “Movable Fan Type Heater,” “Wall-Hung Heater,” “Ceiling-Hung Heater,” “Wall- or Ceiling-Hung Heater,” “Movable Radiant Glass Heater,” “Movable Floor Mounted Air Heater,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**BASEBOARD HEATERS (KLDR)**

**USE AND INSTALLATION**

This category covers space heaters of the portable and permanently mounted types intended to be positioned or installed on or in the wall at the baseboard level, or on the floor.
Baseboard Heaters (KLDR)—Continued

Baseboard heaters have been investigated and found to incorporate suitable safeguards against establishment of fire hazards that might result from contact with draperies, furniture, carpeting, bedding and the like; however, discoloration or scorching (but no glowing embers or flaming) may result on adjacent materials.

Heaters, other than those marked to indicate that they are not for residential use, have been investigated to determine that the accessible surface temperatures are low enough to reduce the likelihood of burns from accidental contact.

Electrical cords, drapes, and other furnishings should be kept away from baseboard heaters. To reduce the likelihood of cords contacting the heater, the heater should not be located beneath electrical receptacles. Receptacle accessories for use with individual manufacturers’ baseboard heaters are covered under Baseboard Heater Accessories (KLQZ).

Baseboard-mounted equipment consists of two types: (1) Complete units intended for individual mounting in specific locations, and (2) complete systems, which include accessories to enable the heating units to be interconnected around the perimeter of a room (see KLQZ). With reference to these systems, each manufacturer is required to furnish detailed instructions covering the assembly of the basic units and accessories, and indicating the method in which ground continuity is intended to be maintained between adjacent sections.

Electrical fittings are provided with each heater of a system to ensure ground continuity between adjacent units and to protect interconnecting wiring, unless investigation shows that standard fittings that are available in the field will accomplish the same result.

A system which is factory furnished with all interconnecting wiring, fittings, raceways, etc., to complete the installation is considered suitable for connection to a single-outlet branch circuit.

PRODUCT IDENTITY

The following product identity appears on the product:

Electric Baseboard Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1042, “Electric Baseboard Heating Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Baseboard Heater.”

CLOTHES DRYERS (KMEX)

USE AND INSTALLATION

This category covers clothes dryers intended for use only where water has been used as the cleaning agent. Unless specifically marked or indicated in the installation instructions, the clothes dryers are intended for freestanding installation with no spacing required between the back and any side to combustible wall surfaces, but are not intended to be operated in closets, alcoves, or other confined areas, nor stacking one unit above another.

A wall-insert clothes dryer is intended to be mounted permanently in a wall or other vertical surface of a building, or in a cabinet. A wall-insert clothes dryer is suitable for installation as a recessed clothes dryer, or as a freestanding clothes dryer.

A recessed clothes dryer is intended to be installed in a closet should be installed in accordance with the marked required clearances to all adjacent surfaces and the required ventilation in the door.

Clothes dryers are provided with means of connection of the metallic parts of the enclosure to ground, and all clothes dryers intended for nominal 120-240 V three-wire operation may be provided with grounding facilities to permit the frame of the appliance to be connected directly to the neutral conductor in accordance with the provisions of ANSI/NFPA 70, “National Electrical Code” (NEC).

Motor- or current protection is included in motor-operated dryers if adequate protection would not be provided by branch circuits to which they would properly be connected.

Clothes dryers, other than condenser-type clothes dryers, are intended to be connected to a clothes dryer exhaust duct to the outdoors. The maximum duct length and number of bends is intended to be in accordance with the clothes dryer installation instructions.

The operation of condenser-type clothes dryers is such that air from the heating of the dryer is circulated across the clothes and then across a condenser. The condenser transforms the vapor to water, which collects in a reservoir in the clothes dryer. As the vapor changes to a liquid, it carries the lint with it to an internal reservoir. The air that passes across the condenser then circulates across the heater in the clothes dryer in a continuous operation until the clothes are dry. There is no venting of moisture/lint-laden air to the outside. All moisture/lint-laden air is continuously recirculated.

Provision should be made for the periodic removal of accumulation of lint that results from normal operation of this type of equipment.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in
Clothes Dryers (KMEX)—Continued

installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each clothes dryer.

Certified clothes dryer transition ducts may be used to connect the clothes dryer to an existing permanent duct system provided as part of the building structure. Certified clothes dryer ducts are covered under Clothes Dryer Transition Ducts (KMIK).

The burglary- and theft-protection features of coin-operated machines have not been investigated, unless specifically indicated by a marking on the machine.

PRODUCT IDENTITY

The following product identity appears on the product:

Clothes Dryer

RELATED PRODUCTS

Dryers other than electrically heated types are covered under Dryers (LEFZ), Gas-fired Clothes Dryers, Type 1 (LETA) and Gas-fired Clothes Dryers, Type 2 (LETX).

Combination washer-dryers are covered under Washing Machines (ZCTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category that are intended for use by the general public within household and commercial installations, including appliances provided with coin, ticket- or card-operated mechanisms, is ANSI/UL 2158, “Electric Clothes Dryers.”

The basic standard used to investigate industrial- and institutional-type products in this category that are not intended for use by the general public is ANSI/UL 1240, “Electric Commercial Clothes-Drying Equipment.”

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Clothes Dryer Transition Duct.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Clothes Dryer Transition Ducts (KMIK)—Continued

CONTROL PANELS, REMOTE, FOR ELECTRIC DUCT HEATERS (KMLW)

USE AND INSTALLATION

This category covers electrical panels incorporating control and/or overcurrent protective devices intended specifically for remote use with electric duct heaters. Overcurrent protective devices in these panels are intended to provide overcurrent protection in accordance with Section 424.22(C) of ANSI/NFPA 70, “National Electrical Code.”

Unless otherwise specified in the manufacturer’s installation instructions, these panels are intended to be mounted remote from the electric duct heaters, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the individual manufacturer’s installation instructions and wiring diagrams.

General-purpose panels are not limited to use with specific makes and models of electric duct heaters. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the electric duct heaters, and control circuit connections to be completed at the time of installation.

Panels intended to be used only with specific certified equipment is so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the certified electric duct heaters.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Control Panel for Specific Electric Space-heating Equipment — See equipment nameplate and installation instructions

General-purpose Control Panel for Electric Space-heating Equipment

RELATED PRODUCTS

General-purpose panels containing only overcurrent protective devices or only magnetically-operated switching devices are covered under Panelboards (QUEY) and Switches, Industrial Control (NRNT), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1996, “Electric Duct Heaters.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Clothes Dryer Transition Duct.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOOK FOR THE UL MARK ON PRODUCT
HEATERS AND HEATING EQUIPMENT (KKBV)

Commercial Cooking Appliances (KNGT)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial indoor use, such as coffee machines, espresso coffee makers (single or grouped dispensers), conductive cookers, food warmers including heated food servers, fryers, griddles, nut warmers, ovens, popcorn machines, steam kettles, ranges, and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is dispensed.

This category also covers custom-built food preparation and/or serving equipment consisting of drop-in components, shell heaters, plate warmers, lighted and/or heated displays, etc.

These appliances are intended for commercial use in unclassified locations in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), and are intended to be installed in accordance with ANSI/NFPA 96, “Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.”

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is indicated in the installation instructions.

Certain appliances covered under this category have also been investigated for use aboard marine vessels over 65 ft in length as covered by USCG, Electrical Engineering Regulations Subchapter J, CG-259, (46 CFR Parts 110-113). Such appliances are identified by UL’s Marine Certification Mark.

REBUILT PRODUCTS

This category also covers commercial cooking equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial cooking equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial cooking equipment is subject to the same requirements as new commercial cooking equipment.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors, unless marked “Use Copper Wire Only For Power Supply Connections.”

PRODUCT IDENTITY

One of the following product identities appears on the product:

Commercial Cooking Appliance
Cooking Appliance

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

RELATED PRODUCTS

For similar types of gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LQGN). For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNRF).

Appliances provided with integral ventilation or recirculating equipment have been investigated to the requirements contained in UL 710B, “Recirculating Systems,” and are covered under Commercial Cooking Equipment with Integral Recirculating Ventilation Systems (KNGK).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, “Commercial Electric Cooking Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Commercial Cooking Appliance Assemblies Certified for Use with Other Manufacturers’ Appliances (KNJA)

USE AND INSTALLATION

This category covers commercial cooking appliance assemblies intended for retrofit installation on other manufacturers’ certified commercial cooking appliances.

The assemblies consist of a controller assembly that is designed for use with a specific manufacturer and model of a commercial cooking appliance.

PRODUCT MARKINGS

The markings on and the literature provided with the controller indicate the specific end-use appliance for which it is intended to be used.

FACTORS NOT INVESTIGATED

The operation of the appliance utilizing these controllers is intended to be identical to the operation with the factory-supplied control; however, any programming functions that vary from the original control have not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:

Commercial Cooking Appliance Controller

RELATED PRODUCTS

See Commercial Cooking Appliances (KNGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, “Commercial Electric Cooking Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH UL-CERTIFIED [MANUFACTURER’S NAME AND MODEL NUMBER(S)]
COMMERCIAL COOKING APPLIANCE(S)
Alternate UL Mark

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the word “CERTIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

COMMERCIAL COOKING APPLIANCE CONTROLLER
FOR USE WITH UL LISTED [MANUFACTURER’S NAME AND MODEL NUMBER(S)]
COMMERCIAL COOKING APPLIANCE(S)
Control No.
Commercial Cooking Appliances Assemblies Certified for Use with Other Manufacturers’ Appliances (KNJA)–Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as deep fat fryers, griddles and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is prepared. Each appliance covered in this category is manufactured with an integral recirculating ventilation system.

The integral recirculating ventilation systems of these appliances consist of a fan, collection hood, and an air filtering system consisting of a grease filter, and may also incorporate other air filtering devices. These systems incorporate an automatic fire extinguisher unit which has been investigated with the cooking equipment section.

Integral recirculating ventilation systems are intended for venting capsuled and filtered air back into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

These appliances are intended for commercial use in unclassified locations in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), and are intended to be installed in accordance with ANSI/NFPA 96, “Ventilation Control and Fire Protection of Commercial Cooking Operations.”

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors unless marked “Use Copper Wire Only For Power Supply Connections.”

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Commercial Cooking Appliance
Commercial Cooking Appliance with Integral Recirculating Ventilation System
Cooking Appliance
Cooking Appliance with Ductless Hood

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

For products that are intended for installation with ducts, see Exhaust Hoods with Exhaust Dampers (YXZI) and Exhaust Hoods Without Exhaust Dampers (YXCW).

Recirculating systems which are separated from commercial cooking appliances are covered under Hoods, Recirculating Systems, for Use with Specified Commercial Cooking Appliances (YZCI).

For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNNP).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKVB), Electrical Equipment for Use in Ordinary Locations (AAIZ) and Heating, Cooling, Ventilating and Air Conditioning Equipment (AIAE).

REQUISITES

The basic standard used to investigate products in this category is ANSI/UL 197, “Commercial Electric Cooking Appliances.”

Commercial cooking appliances with integral recirculating ventilation systems have also been investigated to ANSI/UL 7101R, “Recirculating Systems.”

Appliances with an integral cooking-oil filter have also been investigated to ANSI/UL 1889, “Commercial Filters for Cooking Oil.”

Some products covered under this category have also been investigated to NSF/ANSI 4, “Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment.”

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)–Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to NSF/ANSI 4, the statement “ALSO CERTIFIED TO NSF/ANSI 4” is included on the product.

Alternate UL Mark

UNIT MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Commercial Cooking Appliance” or “Cooking Appliance,” or other appropriate product name as shown in the individual Listings, together with the words “With Integral Recirculating Ventilation System” or “Without Ductless Hood.”

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to NSF/ANSI 4. The combined Listing/Classification Mark consists of the Listing Mark followed by the text “LISTED” above the EPH Mark, and the text “ANSLNF/ANSI 4.”

Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as pressurized deep fat fryers and other appliances for use in commercial kitchens, restaurants or other business establishments where food is prepared. Each appliance covered under this category is manufactured with an integral system feature to limit the emission of grease-laden air from the cooking process to the room ambient.

These appliances have been investigated for the limit of 5 mg/m² for the emission of grease-laden air to the room ambient in accordance with the recommendations of ANSI/NFPA 96, “Ventilation Control and Fire Protection of Commercial Cooking Operations,” using the EPA-202 test method prescribed for cooking appliances provided with integral recirculating air systems.

These products are not intended for connection to a ducted exhaust system.

Appliances in this category are not provided with an integral fire extinguishing system. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to fire extinguishing systems, such as the need for field installed systems in accordance with ANSI/NFPA 96.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, “National Electrical Code,” must be observed in installations or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power-supply conductors unless marked “Use Copper Wire Only For Power Supply Connections.”

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Commercial Cooking Appliance with Ductless Hood
Commercial Cooking Appliance with Integral System for Limiting the Emission of Grease-laden Air (KNLZ)
Emission of Grease-laden Air

Cooking Appliance with Integral System for Limiting the Emission of Grease-laden Air

Other product identities may be used as shown in the individual certifications, followed by the words “with Integral System for Limiting the Emission of Grease-laden Air.”

RELATED PRODUCTS

For products with integral recirculating systems including fire extinguishing systems, see Commercial, with Integral Recirculating Systems (KNKQ).

For cooking oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, “Commercial Electric Cooking Appliances.”

Appliances covered under this category with an integral cooking oil filter have been additionally investigated to ANSI/UL 1889, “Commercial Filters for Cooking Oil.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Commercial Cooking Appliance” or “Cooking Appliance,” or other appropriate product name as shown in the individual Listings, together with the words “with integral system for limiting the emission of grease-laden air.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Custom-built Food Service Equipment (KNNS)

This category covers custom-built commercial food serving and/or cooking equipment that includes various combinations of electric broilers, food warmers including heated food servers, fryers, griddles, ranges, ovens, lighted and/or heated food displays, shelf heaters, plate warmers, conveniences, receptacles, and the like. It may also include refrigerated beverage coolers/dispensers, drinking water coolers, freezers, ice makers, ice cream makers, refrigerators, soda fountain units, and the like.

INSTALLATION

Custom-built food service equipment has been evaluated for installation in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), and the recommendations of ANSI/NFPA 96, “Ventilation Control and Fire Protection of Commercial Cooking Operations.”

Certain types of custom-built food service equipment are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

INSTALLATION INSTRUCTIONS

Custom-built food service equipment of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each section may bear a “Custom-built Food Service Equipment Section” Certification Mark and is marked “Section ___ of ___”. The first blank space is filled with the number of the section. The second blank space is filled with a number indicating the total number of custom-built food service equipment sections that constitute the complete custom-built food service equipment. The custom-built food service equipment has installation instructions describing the proper assembly, mounting, and connection of the numbered custom-built food service equipment sections. The acceptability of the assembly of the sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

This equipment includes factory-built assemblies incorporating pre-installed materials and components which after installation are usually concealed and may not be accessible for inspection at the installation site. Electrical connections made during installation, other than supply connections, are identified by markings on the product.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Equipment in this category is suitable for wiring with either copper or aluminum power-supply conductors unless marked “Use copper wire only for power supply connections.”

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons operating food products prepared or served by use of this equipment has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Custom-built Food Service Equipment

Custom-built Food Service Equipment Section

Food Kiosk

Food Service Work Table

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

For cooking-oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

For refrigerated food service equipment without food heating functions, see Refrigeration Equipment (SCER).

For gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LGGQ).

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 197, “Commercial Electric Cooking Appliances,” and ANSI/UL 471, “Commercial Refrigerators and Freezers.”

Appliances in this category with an integral cooking oil filter have been additionally investigated to the requirements in ANSI/UL 1889, “Commercial Filters for Cooking Oil.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Commercial Cooking Appliance” or “Cooking Appliance,” or other appropriate product name as shown in the individual Listings, together with the words “with integral system for limiting the emission of grease-laden air.”

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Ventilating and Cooking Equipment (AAHC).

ADDITIONAL INFORMATION

For additional information, see Filters for Cooking Oil, Commercial (KNRF).

This category covers cooking-oil filters rated 600 V or less, intended for commercial use. This category covers portable filters and fixed filters whether intended for use with specific fryers or for general use.

These appliances filter the cooking oil used in deep-fat fryers usually found in commercial kitchens, restaurants, or other business establishments where food is prepared. They include a pump and may include an integral oil heater.

Filters suitable for built-in installation, side-by-side mounting or stacking are indicated in the installation instructions for the filters.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, “National Electrical Code,” must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.
Filters for Cooking Oil, Commercial (KNRF)—Continued

These appliances are suitable for wiring with either copper or aluminum power-supply conductors unless marked “Use copper wire only for power supply connections” or the equivalent.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food prepared using filtered oil from these appliances has been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:

Commercial Filter for Cooking Oil

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Cooking-oil filters that form an integral part of another appliance are covered under:

Commercial Cooking Appliances (KNGI)

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNGK)

Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)

Custom-built Food Service Equipment (KNNS)

Gas-fired Food Service Equipment (KFX)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Household Cooking Appliances (KNUR)—Continued

USE AND INSTALLATION

This category covers appliances intended for household use that are designed to heat or cook food products for human consumption.

This category also covers:

1. Products combining features for food preparation and cooking, such as bread makers and coffee grinder/makers
2. Cord-connected pet food cookers and pet treat makers intended for indoor household use that are designed to heat or cook food for pet consumption

In cases where the nature or construction of equipment is such that special safety precautions beyond the requirements of ANSI/NFPA 70, “National Electrical Code,” must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

REBUILT PRODUCTS

This category also covers household cooking appliances that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household cooking appliances are subject to the same requirements as new household cooking appliances, except that an appliance employing a nonmetallic enclosure is required to be 1) grounded, or 2) limited to a rebuilt time frame of five years from the original manufacturing date, subject only to operational verification tests, and not intended to be rebuilt with replacement parts.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects consuming food prepared by use of these appliances has been investigated.

DE-ICING AND SNOW-MELTING EQUIPMENT (KOBQ)

USE AND INSTALLATION

This category covers fixed outdoor electric de-icing and snow-melting systems for use in accordance with Article 426 of ANSI/NFPA 70, “National Electrical Code” (NEC). The equipment is provided with means for permanent wiring connections, except that equipment rated 20 A or less and 150 V ac or less to ground may be of cord-and-plug-connected construction.

To supplement the general requirements in the NEC, the manufacturer is required to provide, with the units or mats, specific installation instructions concerning any limitations of the installation and/or use of the equipment. The instructions for mats or cable units intended for burial in concrete specifically indicate that the slab must be a double pour (poured in sections) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used.

PRODUCT MARKINGS

Factory-assembled products are marked with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under UL MARK below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection. Field-assembled products are provided with a marking with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, or total length and watts per unit length.
De-icing and Snow-melting Equipment (KOBEQ)—Continued

length, and the UL Mark (as noted under UL MARK below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

De-icing and Snow-melting Equipment

Roof De-icing Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Pipe-heating cable is covered under Mobile/Manufactured Home Pipe-heating Cable (KQYU), Industrial and Commercial Pipe-heating Cable (KQXQ) and Residential Pipe-heating Cable (KQYL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAAH).

REQUIREMENTS

The basic requirements used to investigate products in this category intended for use in residential applications are contained in UL Subject 1588, “Outline of Investigation for Roof and Gutter De-Icing Cable Units.”

The basic standard used to investigate products in this category intended for use in commercial and industrial applications is UL 315, “Electrical Resistance Heat Tracing for Commercial and Industrial Applications.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name, “De-icing and Snow-melting Equipment” or “Roof De-icing Equipment,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DUCT HEATERS, ELECTRIC (KOHEZ)

This category covers fixed electric duct heaters and remote control assemblies, rated 600 V or less, typically used in the air stream of a ducted system. A duct heater is a self-contained heater (external to the air-moving unit), field installed in the air stream of a ducted system. It is designed to be installed where an adequate flow of air from a separate interlocked fan or blower system is provided. Such a heater may be located in the main supply duct of an air heating system or in one of the branch ducts. Two or more duct heaters may be installed in a group (in proximity to one another in the duct) if tests indicate acceptable results when the heaters are installed in accordance with the manufacturer’s recommendations. A duct heater intended to be employed in conjunction with another source of heat is judged on the basis of its compliance with ANSI/UL 1996, “Electric Duct Heaters,” and further examination and tests to determine whether or not the combination is acceptable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests and Table 310.15(B)(16) of ANSI/NFPA 70, “National Electrical Code” (NEC) as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see INSTALLATION REQUIREMENTS (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AAALZ) and ELECTRICAL INSTALLATIONS under Heating, Cooling, Ventilating and Cooking Equipment (AAAH).

INSTALLATION

This equipment is intended to be installed in accordance with the NEC. The motor group is to be installed in accordance with ANSI/NFPA 90A, “Installation of Air-Conditioning and Ventilating Systems,” and ANSI/NFPA 90B, “Installation of Warm Air Heating and Air-Conditioning Systems.”

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Electric Heat Considerations

In duct heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the heater or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the heater is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically certified for use with electric duct heaters, see Control Panel—Remote, for Electric Duct Heaters (KMLW). Other certified separate assemblies, as referenced on the duct heater marking, may also be used. Unless specifically indicated in the individual certifications as “Suitable for zero clearance installation,” the duct heater units are intended to be installed in ducts with the clearances to combustible materials as specified in the manufacturer’s installation instructions and marked on the duct heater unit itself. Care should be taken to ensure that duct heaters are positioned properly (horizontal air flow or vertical air flow) since required clearances are affected by the position of the duct work in some instances.

Unless otherwise indicated, the designated clearances (other than “zero”) are based on tests of units with uninsulated sheet-metal ducts attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit and ducts.

Each duct heater incorporates integral limit control int Gnats to protect against abnormal operating conditions that might arise from blocked inlets, blocked outlets, or fan failures. Magnetically-operated switching devices or similar components required for use with these limit controls are either included as an integral part of the heater or are furnished as a separate assembly as described above. Supplementary controls are not necessarily supplied as part of the duct heater.

A separate room thermostat must be provided to control the room air temperatures. For certifications of thermostats and similar devices, see Temperature-indicating and -Regulating Equipment (XAPX). Provision for an interlock circuit, to ensure operation of the separate blower when the duct heater is energized, is included in the heater or in the separate assembly as described above.

Tests have indicated that no adverse thermal effects are obtained when duct heaters marked to indicate that they are suitable for use with heat pumps, or central cooling air conditioners or fan-coil units are installed with certain of these units [See Heating and Cooling Equipment (LZFE)], provided the duct heater is used only in horizontal or upflow systems, and the duct heater is located downstream at least 4 ft from the nearest surfaces of the heat pump, central cooling air conditioner, or fan-coil unit.

Unit Installation

Duct heaters are intended for installation in noncombustible ducts and are designed to be used individually and in groups as supplementary heat sources in air-heating systems or as primary heat sources with separate blowers where the available heat from the duct heaters is sufficient for local conditions.

Duct heaters suitable for outdoor installation are so marked. Heaters not marked as suitable for outdoor installation are for indoor use only.

The manufacturer’s application and installation instructions furnished with each heater should be consulted to determine the factors applicable to the particular installation, including required distances between the heater and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontal or upflow installations, (1) turns in the duct on the inlet side of the heater should be located at least 4 ft from the heater, (2) turns in the duct on the outlet side of the heater should be located at least 2 ft from the heater, and (3) changes in duct sizes, air filters, humidifiers, etc., should be located at least 4 ft from either side of the heater. Duct heaters having instructions describing particular design characteristics or installations are investigated for those specific characteristics and/or installations.

The proper installation of these heaters requires careful consideration of the individual manufacturer’s design characteristics, taking into consideration the number of heaters employed, the volume of air passing through the heaters, and the ambient temperatures and source of the air on the input side of the heater installation.

Motor Group Installation

LOOK FOR THE UL MARK ON PRODUCT
In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or “HACR Type” circuit breakers, the circuit is intended to be protected only by the type of protective devices specified.

PRODUCT IDENTITY
The following product identity appears on the product:
Duct Heater

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 1996, “Electric Duct Heaters.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Duct Heater” or “Duct.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, SAUNA AND STEAM BATH (KPJV)
Sauna Heating Equipment (KPSX)

USE AND INSTALLATION
This category covers heating equipment intended for concentrated heating at elevated temperatures in relatively confined areas with or without the addition of moisture. Particular attention should be paid to the heater installation restrictions, such as warning markings, remote thermostats and control installations, guards, minimum size of room, and distance from adjacent surfaces that are marked on the heater. This equipment is intended for permanent connection to the supply source, except for some sauna heater-room combination units that may be cord connected as specifically indicated.

FACTORS NOT INVESTIGATED
The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the steam is discharged or in permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or “HACR Type” circuit breakers, the circuit is intended to be protected only by the type of protective devices specified.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Sauna
Sauna Heater
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
Steam bath equipment is covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Steam Bath, Steam Bath Generator, Steam Bath Unit.”

Steam Bath Equipment (KQBZ)

USE AND INSTALLATION
This category covers steam bath generators, combination room and steam generator systems, and steam bath cabinets intended for high-humidity concentrated heating at elevated temperatures for personal bathing. Steam bath equipment accessories, such as gangable steam units, timer options, and drain options, are also covered under this category. These accessories are intended for installation only on certified equipment as designated in the individual certifications. The accessories are intended primarily for field installation, but may be factory installed.

Concerning field-wiring connections, mounting location, installation clearances, end-use equipment catalog numbers, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory. Particular attention should be paid to installation instructions of the steam generator and markings on the product for restrictions, such as minimum distances to adjacent surfaces, valving of the steam outlet, etc.

Steam generators covered under this category have not been investigated for their suitability as a source of steam for space-heating purposes or for industrial or commercial use.

FACTORS NOT INVESTIGATED
The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the steam is discharged or where the steam bath is installed have not been investigated.

PRODUCT IDENTITY
One of the following product identities appears on the product:
Shower/Steamer Unit
Steam Bath Cabinet
Steam Bath Equipment
Steam Bath Heater
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS
Sauna heating equipment is covered under Sauna Heating Equipment (KPSX).

Steam generators for industrial or commercial use are covered under Heaters, Industrial and Laboratory (KQLR).

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

UL MARK
The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Steam Bath, Steam Bath Generator, Steam Bath Unit.”
Steam Bath Equipment (KQBZ)—Continued

"Steam Bath Heater," "Steam Bath Equipment," "Shower/Steamer Unit," or other appropriate product name as shown in the individual Listings. The Listing Mark for accessories may appear on the smallest unit container in which the product is packaged. 

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITALITY-USE APPLIANCES (KQDA)

Hospitality-use Drip-type Coffee Makers (KQDJ)

USE AND INSTALLATION

This category covers hospitality-use drip-type coffee makers and other similar drip-type brewing appliances intended for use by the general public in hotel sleeping areas and office environments. Hospitality-use drip-type coffee makers are subject to the same requirements as household drip-type coffee makers, except that the appliances are: grounded, provided with an automatic shutoff manual reset operating control or an electronic on/off push-button switch with a maximum one-hour auto shutoff and "lock-out" feature, provided with a cord tag containing Important Safeguards information, and provided with user maintenance instructions for office building or hotel maintenance and management staff. In cases where the nature or construction of component equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects of consuming food prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Hospitality-use Coffee Maker

Hospitality-use Drip-type Coffee Maker

RELATED PRODUCTS

Drip-type coffee makers intended for commercial use that are found in commercial kitchens, restaurants, or other business establishments where food is dispensed are covered under Commercial Cooking Appliances (KNGI).

Drip-type coffee makers intended for household residential use are covered under Household Cooking Appliances (KNUB).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1082, "Household Electric Coffee Makers and Brewing-Type Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

For use in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS AND HEATING EQUIPMENT (KKBV)

IMMERSION-TYPE LIQUID HEATERS, INDUSTRIAL (KQGV)

USE AND INSTALLATION

This category covers immersion-type liquid heaters intended for heating water-based liquids. The corrosion resistance of the immersed parts has been investigated on the basis of water. The degree of corrosion resistance to acidic, alkaline, etc., water-based liquids may vary depending on the material and/or coating on the immersed parts and the type and strength of the solution. The heater manufacturer's information should be consulted in selecting a heater for an application.

Through-the-wall heaters should be operated only while the heating element is completely immersed in a water-based liquid. Other immersion-type liquid heaters should be immersed to a depth as marked on the product or as indicated in the installation and use instructions.

The heaters incorporate a temperature-limiting device that responds to the temperatures created by the heater; or the heater is marked to specify that a low-liquid-level cutoff control should be installed and connected to de-energize the heater upon a low-liquid-level condition.

Heaters intended to be installed through the wall of a vessel have means for permanent wiring connections to the electrical supply. Other immersion-type liquid heaters may have either a power-supply cord for cord-and-plug connection or provision for permanent wiring connections to the electrical supply.

PRODUCT IDENTITY

The following product identity appears on the product:

Immersion-Type Liquid Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Immersion-Type Liquid Heater."

Alternate UL Mark

For use in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY (KQLR)

GENERAL

This category covers heating appliances rated 600 V or less and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), for industrial and laboratory applications. Heating appliances covered under this category include branding irons, brazers, dental laboratory heaters, electric kilns, etchers, glue pots, heat guns, heating cable, hot plates, incubators of the air flow and water types, laboratory furnaces and dryers, mobile drying ovens, soldering guns and irons, soldering stations and tools, vacuum ovens and water baths.

Portable electric heating devices of the soldering-iron-type present certain inherent hazards. The temperatures necessary for their normal use are high enough to cause fire if they are left in contact with combustible materials.

Infrared heating equipment has not been investigated for use in hazardous (classified) locations as defined in the NEC.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

Industrial and laboratory hot plates, ovens and other similar products have not been investigated for explosion and fire hazards involved in the heating of chemicals.

Vapor degreasers are intended for use only with the specific cleaning fluids. Adequate ventilation is required for this equipment and the manufacturer’s installation and operation instructions should be followed.
### Microwave Cooking Appliances (KQSQ)–Continued

**Microwave Cooking Appliances**

**GENERAL**

This category covers cooking equipment incorporating one or more microwave generators operating in the normal ISM bands of 915 + or - 25 and 2450 + or - 50 MHz. This equipment includes portable and stationary microwave cooking appliances employing resistive-type heating elements for baking, broiling, browning, convection cooking, or similar operations. This category also covers combination microwave oven-vent-hood fans, and kits for converting counter-top units to built-in, under-cabinet, wall-mounted or similar installations.

The appliances are intended for household or commercial use in ordinary locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance. All microwave cooking appliances, cord-connected and permanently connected, have provision for being properly grounded.

Products specifically designed for field installation in or on a microwave cooking appliance or adapted to a microwave cooking appliance from one type of installation to another are indicated in the individual certifications and are marked to identify the microwave cooking appliance(s) with which they have been investigated.

Counter-top and under-cabinet mounted units have been investigated individually in two-sided right-angle alcoves. Products that have been investigated and found suitable for some other type of usage, such as built-in installation, side-by-side mounting, stacking or field installation over electric or gas ranges are identified for such usage by installation instructions, product markings, or both.

Units suitable for installation above a range or counter-mounted cooking unit are identified for such installation and the minimum acceptable vertical clearance between the microwave cooking appliance and the range or counter mounted cooking unit is specified in instructions, product markings, or both.

These microwave cooking appliances are provided with a marking indicating whether they are intended for household use, commercial use, or both.

These microwave cooking appliances have been investigated to demonstrate that microwave radiation emission is within the limitations prescribed by the United States Department of Health and Human Services, Food and Drug Administration, Center for Devices and Radiological Health.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances have been investigated.

Microwave ovens suitable for use in a marine environment are covered under Cooking Appliances, Electrical, Marine (EJOY).

**REBUILT PRODUCTS**

This category also covers microwave cooking appliances which are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt microwave cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt microwave cooking appliances are subject to the same requirements as new microwave cooking appliances.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- **Microwave Cooking Appliance**
- **Microwave Food Warmer**
- **Microwave Oven**
- **Microwave Oven Vent-hood Fan**

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Household electric ranges and built-in ovens incorporating a microwave cooking feature are covered under Ranges, Household Electric (KRXM).

**ADDITIONAL INFORMATION**

For additional information, see Equipment Classification and Approval for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AACH).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Laboratory Hot Plate," "Soldering Iron," "Laboratory Incubator," "Water Bath," "Branding Iron," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Pipe-heating cable is intended to be installed in accordance with the manufacturer’s installation instructions. Information is provided, either as marking on the cable or in the installation instructions, as to the intended application of the heating cable. The certifications appear separately under the following subcategories: Mobile/Manufactured Home Pipe-heating Cable (KQUV), Industrial and Commercial Pipe-heating Cable (KQXR) and Residential Pipe-heating Cable (KQYB). The ability of heating cable to maintain temperatures of liquids in pipes depends upon ambient temperature conditions and has not been investigated.

**RELATED PRODUCTS**

For de-icing and snow melting equipment, see De-icing and Snow Melting Equipment (KOBQ).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Mobile/manufactured Home Pipe-heating Cable (KQUV)**

**USE AND INSTALLATION**

This category covers electric heating-cable systems intended to reduce the likelihood of water freezing in exposed pipes of mobile/manufactured homes. The cable is provided with an attachment plug and intended to be connected to a receptacle outlet on the underside of the mobile/manufactured home. Equipment is intended to be installed in accordance with the requirements of Articles 427 and 550 of ANSI/NFPA 70, “National Electrical Code.” Pipe-heating cable is intended to be installed in accordance with the manufacturer’s installation instructions. Unless specifically indicated otherwise by marking on the heating cable or in the installation instructions, this heating cable is intended for use only on metallic pipes.

**PRODUCT MARKINGS**

Factory-assembled products are marked with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under UL MARK below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection. The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Mobile Home Pipe-heating Cable
- Mobile/Manufactured Home Pipe-heating Cable
- Residential Pipe-heating Cable

Heating cable for use with fire-suppression sprinkler or standpipe systems is covered under Heating-cable Systems for Use on Fire-protection-system Piping (VGNJ).

Heating cable for use as fixed outdoor de-icing and snow-melting systems is covered under De-icing and Snow-melting Equipment (KQVR).

Heating cable for use to reduce the likelihood of water freezing in residential pipes is covered under Residential Pipe-heating Cable (KQYK).

**ADDITIONAL INFORMATION**

The basic requirements used to investigate products in this category are contained in UL Subject 1462, “Outline of Investigation for Mobile Home Pipe Heating Cable.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Mobile Home Pipe Heating Cable” or “Mobile/Manufactured Home Pipe Heating Cable.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Industrial and Commercial Pipe-heating Cable (KQXR)**

**USE AND INSTALLATION**

This category covers electric heating systems intended to be installed on or in pipes in accordance with Article 427 of ANSI/NFPA 70, “National Electrical Code.” The heating system is intended to be connected to the supply system by permanent wiring methods or by flexible supply cord with an attachment plug where permitted. Unless specifically indicated otherwise by marking on the heating cable or heating system or in the installation instructions, the heating cable or heating system is intended for use only on metallic pipes.

**PRODUCT MARKINGS**

Factory-assembled products are marked with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under UL MARK below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection. Field-assembled products are provided with a marking with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, total length and watts per unit length, and the UL Mark (as noted under UL MARK below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection. The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Heating Cable
- Pipe-heating Cable
- Pipe-heating System

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Heating cable for use with fire-suppression sprinkler or standpipe systems is covered under Heating-cable Systems for Use on Fire-protection-system Piping (VGNJ).

**ADDITIONAL INFORMATION**

For additional information, see Pipe-heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Heating Cable,” “Pipe Heating Cable” or “Pipe-heating System,” or other appropriate product name as shown in the individual Listings. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LOOK FOR THE UL MARK ON PRODUCT**
**Residential Pipe-heating Cable (KQYI)**

**USE**

This category covers electric heating systems intended to reduce the likelihood of water freezing in residential pipes. The heating system or heating cable is provided with a flexible cord and attachment plug and is intended specifically for residential pipe-heating uses, such as sprinkler systems and in crawl spaces, basements, walk-in attics, and the like.

The heating cable or heating system is intended for use in accessible locations only.

The heating cable or heating system is suitable for use on metal and rigid plastic water-filled pipes.

**PRODUCT MARKINGS**

Factory-assembled products are marked with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under **UL MARK** below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

Field-assembled products are provided with a marking with the manufacturer’s identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, or total length and watts per unit length, and the UL Mark (as noted under **UL MARK** below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

**ADDITIONAL INFORMATION**

For additional information, see Pipe-heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in **UL Subject 2049**, “Outline of Investigation for Residential Pipe Heating Cable.”

**Alternate UL Mark**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Manufacturers’ Identification**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Residential Pipe Heating Cable” or “Residential Pipe-heating System.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RADIANT HEATING EQUIPMENT (KQYZ)**

**USE AND INSTALLATION**

This category covers electric heating cable, cable on a carrier, and flexible and rigid electric heating panels and heating panel sets intended to be installed as fixed equipment for radiant space heating and/or floor warming in accordance with Article 424, Sections V and IX of ANSI/NFPA 70, “National Electrical Code” (NEC). These products form an integral part of the building construction after on-site assembly, installation, and connection.

The manufacturer is required to provide with the units specific installation instructions concerning any limitations of the installation and/or use of the equipment. These supplement the installation requirements for electric space-heating systems in the NEC. Failure to comply with all installation instructions may result in a risk of fire or electric shock.

The instructions for heating devices intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used.

Cable units are provided with a tag attached to the nonheating leads which supplement the installation instructions. For additional information, see Heaters and Heating Equipment (KKBV).

Heating products include instructions concerning the intended method of connection to building power, and if additional protection (e.g., conduit) of nonheating leads is anticipated during installation.

**RANGES, HOUSEHOLD ELECTRIC (KRMX)**

This category covers household-type, all-electric cooking equipment (consisting of oven and surface units), combination electric and solid-fuel cooking equipment (consisting of electric ovens and surface units, together with a solid-fuel combustion section), wall-mounted and counter-mounted cooking equipment.
Ranges, Household Electric (KRMX)—Continued

Cooking equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer. Some of the more common arrangements are described below.

Microwave cooking appliances and hood fans with or without a shelf or compartment to accommodate a microwave oven that have been investigated and found suitable for installation above a counter-level range or a counter-mounted cooking unit are identified for such installation. The minimum acceptable vertical clearance between the counter-level range or counter-mounted cooking unit and this appliance is specified in the appliance installation instructions, product markings, or both. See Microwave Cooking Appliances (KQSQ) and Electric Fans (GPWV).

All-electric Arrangements

Counter-level Ranges—(See Fig. 1)
The range, with or without a warming tray located on the top of the back guard, may be installed close against vertical walls at the back and at both sides, and a top cabinet may be installed not less than “A” inches above the top of the cooking platform. See Dimension “A” in Fig. 1.

A = 30 in. minimum clearance between the top of the cooking platform and the bottom of an unprotected wood or metal cabinet; or A = 24 in. (not applicable when an electrically heated warming tray is provided on the back guard) when the bottom of the wooden or metal cabinet is protected by not less than 1/4 in. flame-retardant millboard covered with not less than No. 28 MSG sheet steel, 0.015 in. stainless steel, 0.024 in. aluminum or 0.020 in. copper.

Eye-level Ranges—(See Fig. 2)
The range (with either one or two ovens) may be installed close against a vertical wall at the back, and a top cabinet may be installed above the upper oven. If the range does not have a top control panel (this design not shown in illustration) an upper-end cabinet of the same depth as the cabinet above the oven and a base cabinet both 6 in. minimum width should be installed at the end of the range opposite the hinged end of the door. If a top control panel is provided at that end, the upper-end cabinet and base cabinet may be omitted and the range may be installed close against a vertical wall at that end. The end of the range, on which the hinges are located may be installed close against a vertical wall, except that when the wall prevents opening of the door to a position which will permit the removal of an oven rack, an upper-end cabinet of the depth mentioned above and a base cabinet (both of sufficient width) may be installed such that the required opening of the door is achieved. If a lower oven or storage area is not provided to permit floor mounting, the range may be installed close against a vertical wall or with no more than a 6 in. air space to a vertical wall at the end where electrical units are located. See the table below for the spacings at the flue or vent and at the end of the range where solid fuel is burned.

3. Control panel
4. Cooking surface
5. Building side wall
6. Oven
7. Building side wall
8. Base building cabinet
9. Building side wall
10. Upper-end building cabinet

Combination Ranges

As permitted by the installation marking, the range may be installed close against a vertical wall or with no more than a 6 in. air space to a vertical wall at the end where electrical units are located. See the table below for the spacings at the flue or vent and at the end of the range where solid fuel is burned.

All-electric ranges, wall-mounted and counter-mounted cooking equipment and combination ranges, intended for nominal 125/250 V or less (including those rated 120/208), three-wire, operation are provided with a bonding connection between the frame of the appliance and the neutral to provide grounding in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). Unless the appliance is marked “Warning: Frame Grounded To Neutral Of Appliance Through A Link. This Range Not For Use In Mobile Homes Or In Areas Where Local Codes Do Not Permit Grounding Through Neutral,” instructions are provided for disconnecting the bond and making a direct connection of the metallic parts or the unit to ground.

The flexible metallic conduit and high-temperature insulated leads provided with some ranges are tested and recognized as a component part of the equipment. Unless a conduit fitting or outlet box is installed at the factory, tape or other means is provided at the end of the conduit to protect the conductors during shipment. This protection is not intended to take the place of a conduit bushing or fitting which is required by the NEC.

REBUILT PRODUCTS

This category also covers household electric ranges that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household electric ranges are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household electric ranges are subject to the same requirements as new household electric ranges.

FACTORs NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

WATER HEATERS (KSAV)

**Commercial Storage Tank and Booster Water Heaters (KSBZ)**

**USE AND INSTALLATION**

This category covers water heaters intended to supply hot water for commercial or industrial use, and to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

These water heaters are equipped with a temperature-regulating control that limits the water temperature to a maximum of 90°C (194°F). This control has been preset at the factory to a maximum setting of 60°C (140°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

A combination temperature-pressure relief value is supplied or factory installed on these heaters. When supplied separately, instructions for control that restricts the water temperature to a maximum of 99°C (210°F) have been preset at the factory to a maximum setting of 60°C (140°F). This control is illustrated in the Introduction of this Directory together with the word “LISTED,” a control number, and the product name “Commercial Storage Tank Water Heater” or “Booster Water Heater,” or other appropriate product name as shown in the individual Listings.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Space-heating Water Heater

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1453, “Electric Booster and Commercial Storage Tank Water Heaters.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Commercial Storage Tank and Booster Water Heaters (KSBZ)—Continued**

**Alternate UL Mark**

**Water Heaters, Space Heating (KSDR)**

**USE AND INSTALLATION**

This category covers water heaters intended for the heating of water and storage of hot water for space-heating purposes, to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.” These heaters are intended for use in jurisdictions that permit the use of hot water space-heating systems that do not employ tanks constructed and marked in accordance with the “ASME Boiler and Pressure Vessel Code.” Authorities Having Jurisdiction should be consulted before installation.

These heaters are equipped with temperature-regulating devices that allow a water temperature not higher than 90°C (194°F) and also with temperature-limiting devices that limit the water temperature to a maximum of 99°C (210°F).

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Space-heating Water Heater

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Pressurized electric water heaters intended for space-heating applications that are constructed and marked in accordance with the appropriate “ASME Boiler and Pressure Vessel Code” are covered under Boilers, Electric (BDJS).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 834, “Heating, Water Supply, and Power Boilers – Electric.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Household Water Heaters, Storage Tank (KSDT)**

**USE AND INSTALLATION**

This category covers storage tank water heaters rated 600 V or less and 12 kW or less and having a tank capacity of more than one gal and not more than 120 gals.

This category does not cover immersed electrode, side arm, booster, instantaneous or immersion-type water heaters or water-heating portions of water-dispensing appliances.
Household Water Heaters, Storage Tank (KSDT)—Continued

These water heaters are intended for household use and permanent connection to the supply source in accordance with ANSI/NFPA 70, “National Electrical Code.”

Household storage tank water heaters are equipped with a temperature-regulating device intended to restrict the water temperature to a maximum of 85°C (185°F). This device has been preset at the factory to a maximum setting of 51.7°C (125°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

Safety devices, such as temperature-pressure-relief mechanisms, are not required to be furnished as part of the certified water heater, but markings and instructions accompany each water heater indicating that a suitable safety device which complies with the local plumbing codes shall be connected to the heater at the time it is installed.

**PRODUCT MARKINGS**

Water heaters in accordance with Part 3280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency are marked “Design evaluated by UL in accordance with Part 3280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency.”

**PRODUCT IDENTITY**

The following product identity appears on the product:

Household Storage Tank Water Heaters

Other product identities may be shown as the individual certifications.

**RELATED PRODUCTS**

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

Solar-electric water heaters are covered under Water Heaters, Solar (UZWZ).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAZL), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 174, “Household Electric Storage Tank Water Heaters.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Household Storage Tank Water Heater,” or other appropriate product name as shown in the individual Listings.

* * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Immersion Water Heaters (KSFX)—Continued**

This category covers immersion water heaters, both cord-connected and for permanent connection.

Some immersion water heaters intended for permanent connection incorporate thermostats and auxiliary switches which respond to the temperatures created by the immersion water heaters. The acceptability of thermostats or auxiliary switch construction; as temperature regulating and/or safety controls when incorporated in the ultimate equipment assembly for which they are intended, must be determined in accordance with the requirements applicable to that equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Immersion Heaters

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAZL), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Immersion Heater,” or other appropriate product name as shown in the individual Listings.

* * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Miscellaneous Water Heaters (KSGR)—GENERAL**

This category covers instantaneous heaters, strap-on-type heaters, heaters for sink, water-cooler mounting, and other water heaters not covered under Household Water Heaters, Storage Tank (KSDT), Commercial Storage Tank and Booster Water Heaters (KSBZ) or Immersion Water Heaters (KSFX).

**PRODUCT IDENTITY**

One of the following product identities appears on the product: Instantaneous Water Heater Water Heater

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAZL), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Instantaneous Water Heater” or “Water Heater,” or other appropriate product name as shown in the individual Listings.

* * * * * * * * * * * * * * * * * * * * * * * * * * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEATERS, WATERBED (KSHU)—GENERAL**

This category covers cord-connected electric heaters, usually in the form of mats, intended for use under the mattresses of waterbeds. Heaters employing external, user-adjustable temperature control units are covered as a unit, for installation in accordance with the manufacturer’s instructions.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Waterbed Heater

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAZL) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

---

**HEATERS, SPECIALTY (KSOT)**

**USE AND INSTALLATION**

This category covers heating appliances rated 600 V or less for use in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). This includes heating appliances intended for household and similar applications, as well as products that generate steam for other than space-heating purposes, and have an electrical power rating of 15 kW or less per steam-generating vessel. A heating appliance is defined as an electrically energized product that directly or indirectly generates heat to perform its intended function.

Heating devices may present certain inherent hazards. The temperatures necessary for their normal use can be high enough to cause fire if they are left in contact with combustible materials.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, necessary special instructions are marked on the equipment.

**REBUILT PRODUCTS**

This category also covers steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features are subject to the same requirements as new steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features.

Rebuilt products are required to be provided with a date code indicating the date of rebuilding.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:
- Charcoal Igniter
- Embosser
- Hand Dryer
- Pet Dryer
- Stock Tank Heater

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

**RELATED PRODUCTS**

Hand dryers incorporating fans without heaters are covered under Fans, Electric (GPWV).

Industrial and laboratory heaters, including mobile drying ovens, soldering stations and tools, laboratory furnaces, incubators, hot plates, electric kilns, dental laboratory heaters, and the like are covered under Heaters, Industrial and Laboratory (KQLR).

Devices intended for vaporization of water, certain medications in water solution and glycol are covered under Vaporizers (YEIV).

Incubators and brooders intended for use on farms and commercial hatcheries are covered under Incubators and Brooders (NHYZ).

Heated air deodorizers and air fresheners are covered under Deodorizers and Air Fresheners (ECCX).

Heaters, Specialties (KSOT)—Continued

Heaters intended for installation in or adjacent to swimming pools or spas are covered under Heaters (WBRR).

Household vacuum cleaners provided with a steam-cleaning feature, where the vacuum cleaner is the appliance’s primary function, are covered under Vacuum Cleaning Machines and Cleaner (DMML).

Steam-cleaning machines with sweeper features, where the sweeper function is the appliance’s primary function, are covered under Cleaning Machines, Motor Operated (DMGK).

High-pressure cleaning machines provided with steam-cleaning features, where the high-pressure-cleaning function is the appliance’s primary function, are covered under High-pressure Cleaning Machines, Electrically Operated (DMKK).

**ADDITIONAL INFORMATION**

For additional information, see Heaters and Heating Equipment (KKBV), Electric Equipment for Use in Ordinary Locations (AAHZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

Steam-cleaning machines with vacuum-cleaning features, where the steam cleaner is the appliance’s primary function, are additionally investigated to ANSI/UL 1017, “Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines.”

Steam-cleaning machines with sweeper features, where the steam cleaner is the appliance’s primary function, are additionally investigated to ANSI/UL 73, “Motor-Operated Appliances.”

Steam-cleaning machines with high-pressure-cleaning features, where the steam cleaner is the appliance’s primary function, are additionally investigated to ANSI/UL 1776, “High-Pressure Cleaning Machines.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Waterbed Heater.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer(s), and a file number.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:
- Heat Emitter
- Heat Emitter for Vivarium Heaters

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING APPLIANCES (KTCR)

GENERAL

This category covers heating appliances intended for installation and use in accordance with the following standards as appropriate:

- ANSI/NFPA 31, "Installation of Oil-Burning Equipment"
- ANSI/NFPA 54, "National Fuel Gas Code"
- ANSI/ASTM D396, "Liquefied Petroleum Gas Code"
- ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems"
- ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems"

When installing manufactured home and recreational vehicle appliances, see also the Department of Housing and Urban Development’s Manufactured Home Construction and Safety Standards or ANSI/NFPA 1192, "Recreational Vehicles."

HEATING APPLIANCES are investigated to determine the suitability of the construction and performance of the appliances as an assembly and of the fuel-burning apparatus, controls, electrical features and other parts furnished by the manufacturer as part of the certified assembly. It is also determined that combustible walls and surfaces adjacent to or in contact with the appliance will not attain unsafe temperatures when the appliance is installed and used as directed.

Heating appliances are marked to indicate minimum clearances in inches, type of flooring, when they may be installed in an alcove or closet, and the total free area of the required air openings into a closet. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum. When the Certification Mark on an appliance includes the statement "For Operation Only in Presence of Competent Attendant," such appliances are not furnished with primary safety controls and are intended for operation only in the presence of a competent attendant.

When the Certification Mark on an appliance includes the statement "For Operation Only in Presence of Competent Attendant," such appliances are not furnished with primary safety controls and are intended for operation only in the presence of a competent attendant. The Certification Mark applied to an oil-burning appliance designates the ANS/NFPA 1192 grade number of the fuel oil, or other fuel, for which the appliance is certified.

If the appliance is also investigated in accordance with a standard other than a UL Standard, the marking on the appliance includes the designation of that standard.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS AND HEATING EQUIPMENT (KKBV)

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number, followed by the word "KKBV".

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH [identification of specified UL-certified product]

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service Programs. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PRODUCT IDENTITY

FOR USE WITH [identification of specified UL Listed product]

Control No.

*************************

USE AND INSTALLATION

This category covers gas-, gas-oil-, and oil-fired boiler assemblies intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated in the boiler assembly Listings Mark or in the burner Listing Mark and with limit controls.

The sketches, dimension symbols and abbreviations as illustrated below are referenced in the individual Listings to indicate minimum clearances in inches, type of flooring, when an appliance may be installed in an alcove or closet, and the total free area of the required air openings into a closet. This information is also marked on the appliance. The clearances so designated are the minimums required to avoid overheating; additional clearances may be needed for accessibility.

BOILER ASSEMBLIES (KVFT)

USE AND INSTALLATION

Descriptions of symbols and abbreviations applicable to the installation of boiler assemblies are as follows:

- A – Clearance above top of boiler
- B – From front of boiler. Prefix “C” to numeral indicates suitability for alcove or closet installation; prefix “A” indicates suitability for alcove installation only
- C – From chimney or vent connector measured horizontally or below pipe
- D – From back of boiler
- E – From left side of boiler
- F – From right side of boiler
- G – Indicates type of flooring: NC = Noncombustible, C = Combustible

Typical Installation Clearances for Gas-, Gas-Oil-, and Oil-fired Boiler Assemblies

When a gas-, gas-oil-, or oil-fired boiler assembly is Listed for typical installation clearances, the individual Listings refer to the Form designation; when the clearances are not typical, each clearance is indicated by the appropriate symbols in the individual Listings. If a boiler assembly Listed for alcove or closet installation is installed in a room which is large in relation to the size of the boiler assembly, it may be installed at the minimum clearances specified for closet and alcoves or as indicated by the designated optional Form.

Form designations for typical installation clearances for gas-, gas-oil-, and oil-fired boiler assemblies installed in rooms are as follows:

<table>
<thead>
<tr>
<th>Form</th>
<th>Standard Minimum Clearances (in.)</th>
<th>NC</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>6</td>
<td>24</td>
<td>18</td>
</tr>
<tr>
<td>II</td>
<td>6</td>
<td>24</td>
<td>18</td>
</tr>
</tbody>
</table>
Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front, and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front, and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Waste-heat-recovery boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front, and chimney connector not less than indicated on the boiler assembly. The chimney connector should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Field-erected Boiler Assemblies (KVQE)

**USE AND INSTALLATION**

This category covers gas-, oil-, and gas-oil-fired boiler assemblies intended to be assembled in the field by qualified service personnel. By design, the boiler consists of factory-built subassemblies or segments (as described below) and is furnished with appropriate controls and detailed instructions to accommodate assembly and installation, and markings pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate NFPA standards, the "International Mechanical Code," and/or the "Uniform Mechanical Code," as applicable, and local codes and regulations.

Factory-built subassemblies or segments consist of, but are not limited to:
- pressure vessel
- combustion chamber
- tube sheets: front, rear and intermediate as required
- flue tubes
- front and rear smoke boxes
- rear-access plug
- burner-mounting plug
- boiler-mounting base
- steel casing and insulation package
- all necessary pressure-vessel tappings, manways, hand-holds
- carton(s) containing required waterside controls
- carton(s) containing sufficient amount of welding rod, flexible and/or rigid steel conduit and appropriate connectors, sufficient amount of wiring for connection of waterside controls (may be a wiring harness), electrical connectors, paint, labels and instruction plates.

The boiler-pressure vessel is required to be designed, assembled, tested and inspected in accordance with the requirements of Section I or Section IV of the "ASME Boiler and Pressure Vessel Code." Conformance with the code is determined by application of the "H" or "S" stamp and, if applicable, the "A" symbol stamp on the appropriate part of the boiler assembly.

The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual certifications.

Field-erected boilers undergo a final inspection following completion of field assembly, ASME code-required testing and inspection, and operation.

**RELATED PRODUCTS**

See Gas-fired Boiler Assemblies (KVTR), Oil-fired Boiler Assemblies (KWUX) and Burner Assemblies with Reduced Emissions (KXPL).

**ADDITIONAL INFORMATION**

For additional information, see Boiler Assemblies (KVFT), Heating Appliances (KTCR) and Heating, Cooling, Ventilating and Cooking Equipment (AAC).
HEATING AND COOLING EQUIPMENT (LZFE)

GENERAL

This category covers various types of heating and cooling equipment typically used for space conditioning. Individual categories following the GENERAL INFORMATION section below are identified for each type of equipment. Not all statements in GENERAL INFORMATION are applicable to all types of equipment covered under this category; only the statements that are identified are applicable. Refer to the individual categories for the general information that is applicable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests conducted under Electrical Equipment for Use in Ordinary Locations (AALZ) and VII. ELECTRICAL INSTALLATIONS under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

GENERAL INFORMATION

Product Types

1. The following defines the types of systems covered in the individual categories below:

A. Self-contained — Refrigeration system in one section, factory assembled, with refrigerant charge and tested for leaks.

B. Compressor Unit — Includes one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit, and to a remote condenser having a marked working pressure not in excess of 200 psia as designated by the marking on the unit data plate. The term is applicable both to refrigeration equipment of any size and also to air conditioning equipment. The term “air conditioning systems equipment, compressor unit” is used for air conditioning equipment rated over 135,000 Btu/hr (37 kW) capacity.

C. Compressor Condenser Unit — Includes one or more compressors and condensers with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (The term is applicable to air conditioning systems equipment only.)

D. Compressor-Evaporator (Cooler) Unit — Includes one or more compressors and evaporators (coolers) with interconnecting refrigerant tubing or piping and with associated controls and wiring. The unit is factory assembled and tested for leaks. The refrigerant type is marked on the unit and the operating refrigerant charge may or may not be provided as indicated on the unit nameplate. These units are intended for field connection to a remote condenser having a marked working pressure not in excess of 200 psia as designated by the marking on the unit data plate. (The term “compressor-evaporator” is applicable to air conditioning systems equipment and special-purpose air conditioners, and the term “compressor-cooler” is applicable to liquid chillers.)

E. Compressor Evaporator/Condenser — Refrigeration system in two sections, one including the compressor and the evaporator and the other, the condenser. The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the compressor evaporator unit nameplate. Each section is tested for leaks. (The term is applicable to central cooling air conditioners and special-purpose air conditioners.)

F. Condensing Unit/Evaporator (Outdoor/Indoor Unit) — Refrigeration or air conditioning system in two sections, the condensing unit (or outdoor) section including the compressor and condenser and the other section the evaporator (indoor section). The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the condensing unit nameplate. Each section is tested for leaks. (The term “condensing unit/evaporator” is applicable to central cooling air conditioners and special-purpose air conditioners, and the term “outdoor/indoor unit” is applicable to heat pumps.)

G. Heating, Cooling and Ventilating Equipment — Intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately certified. Unless indicated in the individual certifications for the other equipment, this equipment has not been investigated for operation when combined with other certified equipment in a complete system assembled in the field.

H. Condensing Unit — Includes one or more compressors and air- or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (Same as “C” above, except the term is applicable to refrigeration equipment or to air conditioning equipment of any size.)

2. Heating and cooling equipment of the unitary type consists of one or more factory-built sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the heating and/or cooling equipment. Equipment provided in two or more sections is either marked to identify the appropriate sections for proper interconnection, or the designations of the sections comprising the assembly are shown in the individual certifications. Where so designated, a separately certified electric central heating furnace, fan-coil unit or fan unit may serve as a portion of the assembly.

3. Certified equipment is rated 600 V or less. Centrifugal type units as identified in the individual certifications are rated 7200 V or less.

Installation Codes

4. This equipment is intended to be installed in accordance with the requirements of the NEC.

7. For equipment intended to be installed in mobile homes, reference should be made to 24CFR3280, “Manufactured Home Construction and Safety Standards.”

8. For equipment intended to be installed in recreational vehicles, reference should be made to ANSI/NFPA 1192, “Recreational Vehicles.”

9. Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, “Safety Standard for Refrigeration Systems,” but are included in ANSI/ASHRAE 34, “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL’s Listing Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, “Refrigerants.”

Wiring Diagrams

10. The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Units Used with Duct Heaters

11. Unless otherwise indicated in the individual certifications, certified duct heaters that may be installed in conjunction with the equipment covered in the certifications should be installed at least 4 ft downstream from the equipment.

Field-installed Accessories

12. Heating and cooling equipment investigated for use with certified field-installed accessories, such as electric resistance heaters (including duct heaters), is specifically indicated in the individual certifications. See Accessories, Air Conditioning Equipment (ABFY) and Duct Heaters, Electric (KOHZ).
13. Units investigated for use with field-installed steam, hot water, or refrigerant coils or with electric resistance heaters (including certified accessories or duct heaters as noted in paragraph 11 above) are marked to indicate.

Electric Heat Considerations
14. Units that incorporate factory- or field-installed electric resistance heaters are identified in the individual certifications.

Field-installed electric resistance heaters that have been investigated for use with the certified equipment at the time of certification, are identified on the heating and cooling equipment nameplate by manufacturer’s name and part number, or are covered under Electric Heater Assemblies Certified for Use on Specified Equipment (LZPT).

15. Where a through-air clearance to combustible materials is required, the clearance is marked on the heating and/or cooling equipment and is designated in the individual certifications. The clearances are the minimum required to avoid overheating; additional clearances may be required for accessibility.

When zero clearance is specified, temperatures are measured directly on the unit cabinet with uninsulated sheet metal ducts and plenum attached. When clearances other than zero are specified, temperatures are measured on a wood test enclosure spaced at the specified clearances from the unit cabinet, ducts and plenum.

16. In heating and cooling equipment employing electric resistance heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected by overcurrent devices at not more than 60 A.

The overcurrent devices are either included as an integral part of the heating and cooling equipment or furnished as a separate assembly. If the overcurrent devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies specifically recognized for use with electric space heaters provided as part of this equipment, see CONTROL PANELS FOR SPECIFIC ELECTRIC HEATING UNITS below. Other certified separate assemblies, as referenced on a marking on the heating and cooling equipment, may also be used.

Unit Installation
17. Unless otherwise specified in the marking on the equipment, the unit may be installed on combustible flooring.

18. Attic type units are so indicated in the individual certifications. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the marking or instructions provided on the unit.

19. Units/Sections suitable for outdoor installation are so marked and identified in the individual certifications either by the term “outdoor section” or by an appropriate footnote. Units/Sections not marked as suitable for outdoor installation are for indoor use only.

Motor Group Installation
20. In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the National Electrical Code. The short-circuit load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses, circuit breakers or overcurrent devices, the circuit is intended to be protected only by the type of protective devices specified.

ADDITIONAL INFORMATION
For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AHAC).

REQUIREMENTS
The basic standard used to investigate products in this category is ANSI/UL 1995, “Heating and Cooling Equipment.” Alternatively, air conditioning systems, central cooling air conditioners (packaged and split system), heat pumps (packaged and split system), heat pump water heaters, accessories for heating and cooling equipment, accessories for air conditioning equipment, electric heater assemblies, humidifiers, and miscellaneous heating and cooling equipment single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to ANSI/UL 60335-1, “Household and Similar Electrical Appliances, Part 1: General Requirements,” and ANSI/UL 60335-2-40, “Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.” Other standards may also be used where specifically indicated in the individual certifications below.

UL MARK
The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name as shown in the following individual categories or in the individual Listings.

ABSORPTION AIR CONDITIONING EQUIPMENT
GENERAL INFORMATION paragraphs 1A, 2, 3, 4, 5, 6, 9, 19 and 20 are applicable to this equipment.

This category covers equipment of the unitary type employing an absorption type refrigeration system, intended for commercial or domestic cooling, or heating and cooling of a liquid such as water or a water-refrigerant solution. This equipment is intended primarily, but not exclusively, for air conditioning application.

The direct energy source for cooling and heating is a hot fluid (such as gas, liquid or steam) as obtained from a source such as a solar-heat system or waste-heat, and/or gas-, oil-, or gas-oil-fired burners. Absorption air conditioning equipment provided with gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

ACCESSORIES FOR AIR CONDITIONERS
GENERAL INFORMATION paragraphs 1A, 1B, 1C, 1D, 3, 4, 5, 6, 9, 10, 11, 12, 13, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment with a rated cooling capacity exceeding 135,000 Btu/h, intended for commercial or industrial central cooling applications. For equipment rated 135,000 Btu/h or less, see AIR CONDITIONERS, CENTRAL COOLING OR CONDENSING UNITS below. For additional self-contained units incorporating gas-, oil-, or gas-oil-fired burners, see HEATING AND COOLING UNITS below.

Self-contained units and compressor-evaporator units may include heating means, including electric resistance heaters, gas-, oil-, or gas-oil-fired burners, or hot water or steam coils.

A gas-fired heating portion included in this category is for use only in the same manufacturer’s specified air conditioning systems equipment as marked on the heating portion and as indicated in the individual certifications.

The basic standard used to investigate the refrigeration portion of the products in this category is ANSI/UL 1995. The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, “Gas-Fired Central Furnaces.”

The Gas-fired Listing Mark is provided either on a Listed self-contained unit or on a Listed gas-fired heating section or portion of a Listed self-contained unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words “GAS-FIRED” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product identity, and the standard designation as shown in the following individual categories or in the individual Listings.

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-EVAPORATOR UNITS

GENERAL INFORMATION paragraphs 1A, 1B, 1C, 1D, 3, 4, 5, 6, 9, 10, 11, 12, 13, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment of the unitary type for commercial or domestic applications.

Unless so indicated in the individual certifications, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section.

CONDENSING UNITS
COMPRESSOR UNITS
ACCESSORIES FOR CONDENSING UNITS

**ACCESSORIES FOR COMPRESSOR UNITS**

**ACCESSORIES FOR CONDENSING OR COMPRESSOR UNITS**

**GENERAL INFORMATION**

Paragraphs 1B, 1H, 3, 4, 9, 13, 19 and 20 are applicable to this equipment.

This category covers units intended for refrigeration service of any Btu per hour capacity. For units intended primarily for air conditioning applications, see **AIR CONDITIONING SYSTEMS EQUIPMENT**. Refrigerant temperature ratings for field-installed coils intended for cooling, or with integral factory-installed coils intended for cooling, have indicated no adverse effects on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to a condensing unit of a central cooling air conditioner has been investigated only for those specific combinations identified in the individual certifications as “Air Conditioners, Central Cooling,” or for those specific combinations identified in the individual certifications as “Heat Pumps.” The effect of refrigerant heating on the furnace has not been investigated for other combinations.

**ENVIRONMENTAL AIR TERMINAL UNITS**

**GENERAL INFORMATION** paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower with or without electric resistance heaters. The appliances are intended to be installed in accordance with the manufacturer’s installation instructions. For fans that are similar to fan-coil units with electric resistance heaters, but not provided with a refrigerant, steam or water coil, are identified in the individual certifications as “Room Fan Heater Units.”

**FAN UNITS**

**GENERAL INFORMATION** paragraphs 1G, 3, 4, 5, 9, 10, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers equipment intended to be connected to a duct system that supplies conditioned air for environmental heating and/or cooling. The units consist of a motor-operated fan or blower and may have air control dampers. The units are expected to be thermostatically operated by remote control. The units do not include factory-installed heat exchangers or other integral heating or cooling means.

Fan units with field-installed heater accessories as detailed in paragraph 1G through 20 inclusive are the equivalent of “Electric Central Heating Furnaces.”

Units intended for use in duct systems with air temperatures exceeding normal room ambient temperature are marked with the maximum inlet air temperature rating.

Other types of fans for duct connection are covered under Fans, Electric (GPWV) and Ventilators, Power (ZAC).

**HEAT PUMPS**

**GENERAL INFORMATION** paragraphs 1A, 1F, 2, 3, 4, 5, 7, and 9 through 20 inclusive are applicable to this equipment.
This category covers reverse cycle unitary air conditioning systems for comfort heating and cooling (or for comfort heating only), if so indicated in the individual certifications.

HEATING AND COOLING EQUIPMENT
HEAT PUMP WATER HEATERS
HEAT PUMP SWIMMING POOL HEATERS
HEAT PUMP SPA HEATERS

SECTIONS OF HEAT PUMP WATER HEATERS
ACCESSORIES FOR HEAT PUMP WATER HEATERS

GENERAL INFORMATION paragraphs 2, 3, 4, 9, 10, and 20 are applicable to this equipment.

This category covers products intended to heat water utilizing the heat of rejection from a mechanical refrigeration system and option or combinations of these products. These products are designed to restrict the outlet water temperature to a maximum of 85°C (185°F) under normal operating conditions and to a maximum of 99°C (210°F) under abnormal conditions. These units may include an integral storage tank or may be designed for connection to a separate tank and may also include electric resistance heaters to heat the water. For those units that include an integral tank, see Water Heaters, Household, Storage Tank (KSDT) for additional information. See Heaters (WBRR) for additional information on heat pump pool and spa heaters.

HEATING AND COOLING UNITS
COOLING PORTIONS OF HEATING AND COOLING UNITS

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 9, 10, 15, 19, and 20 are applicable to this equipment.

This category covers self-contained assemblies manufactured for installation as a package. They include all the necessary components needed for both heating and cooling. Heating is by gas-, oil-, or gas-oil-fired burners, and by incorporating a heat pump system. Cooling and heat-pump heating is by mechanical refrigeration with any rated cooling/heating capacity. The information pertaining to safe placement is indicated in the individual certifications.

The name and amount of refrigerant, test pressure, and electrical rating appear on the unit.

A gas-fired heating portion included in this category is for use only in the same manufacturer’s specified air conditioning or heat pump systems equipment as marked on the heating portion and as indicated in the individual certifications.

The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, “Gas-Fired Central Furnaces.”

The Gas-fired Listing Mark is provided either on a Listed heating and cooling unit or on a Listed gas-fired heating section or portion of a Listed heating and cooling unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words “Gas Heating Portion,” and the standard designation “ANS Z21.47(+)/CSA 2.3(+)/(++)+ Central Furnace.”

Suffix letter of latest addendum if applicable

SPECIAL-PURPOSE AIR CONDITIONERS

AIR CONDITIONING LIQUID CHILLERS

GENERAL INFORMATION paragraphs 1A, 1D, 2, 3, 4, 6, 9, 10, 19, and 20 are applicable to this equipment.

This category covers equipment intended for cooling of liquid, such as water, or water-antifreeze solutions. The equipment is intended primarily, but not exclusively for, air conditioning application.

Air conditioning liquid chillers rated 135,000 Btu/h or less are of the unitary type. Liquid chillers with a rated cooling capacity exceeding 135,000 Btu/h may be either self-contained units or compressor-cooler units.

Drinking water coolers, commercial processing water coolers, and other liquid chillers investigated only for commercial refrigeration applications other than air conditioning are covered under Refrigeration Equipment (KTFV).

Absorption air conditioning equipment that utilizes hot fluid (such as gas, liquid or steam) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

Absorption air conditioning equipment provided with a gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

Accessory air conditioning equipment that utilizes hot fluid (such as gas, liquid or steam) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

General information pertaining to the items and equipment covered under the various Equipment categories is indicated in markings and/or installation instructions as indicated under GENERAL INFORMATION. This information also appears in the individual certifications.

SPECIAL-PURPOSE AIR CONDITIONERS
ACCESSORIES FOR SPECIAL-PURPOSE AIR CONDITIONERS

GENERAL INFORMATION paragraphs 1A, 1D, 1E, 1F, 2, 3, 4, 9, 10, 12, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment designed for special purposes, such as environmental control of computer rooms. This equipment consists of one or more factory-made sections, as described under GENERAL INFORMATION. Unless so indicated in the...
individual certifications, an evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or be furnished as a separate section.

Computer-room air conditioners are intended for installation in accordance with ANSI/NFPA 75, “Fire Protection of Information Technology Equipment.” These air conditioners are generally installed on the raised floors of computer rooms and have not been investigated for connection to ducts unless so specified in the individual certifications.

Factory-installed electric heaters and humidifiers have been investigated for this application.

VENTILATING UNITS

GENERAL INFORMATION

This category covers miscellaneous heating and cooling equipment. These units are generally factory built, and may be an integral part of the evaporator section or be a separate assembly, and may be an integral part of the evaporator section or be furnished as a separate section.

Computer-room air conditioners are intended for installation in accordance with ANSI/NFPA 75, “Fire Protection of Information Technology Equipment.” These air conditioners are generally installed on the raised floors of computer rooms and have not been investigated for connection to ducts unless so specified in the individual certifications.

Factory-installed electric heaters and humidifiers have been investigated for this application.

VENTILATING UNITS

SECTIONS OF VENTILATING UNITS

Ductless Heating and Cooling Equipment, Large, Open Building (LZP6)

GENERAL

This category covers ductless heating and cooling equipment intended to serve a single, large, open area, such as a warehouse. These are encased assemblies designed as a unit and intended as the prime source of heating, cooling and dehumidification.

INSTALLATION

This equipment is rated 600 V ac or less and is intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC).

Ductless heating and cooling equipment is custom built to the customer’s specifications. This equipment may be installed in the conditioned airspace or outdoors; when installed outdoors, provisions, such as a short duct, are provided for serving the adjacent space. This equipment has a heating range from 10,000 to 18,000,000 BTU’s, a cooling capacity range up to 1,000 tons, and an air circulation of 1,000 to 200,000 cfm. The heat sources include electric, gas, hot water, oil or steam. Each unit provided with electric, gas-fired or oil-fired heat incorporates integral limit controls intended to protect against abnormal operating conditions, which might arise from blocked inlets, blocked outlets, or fan failures. The limit control will not allow a discharge air temperature during all the normal, abnormal and back-up tests of 150°F (65.56°C).

After assembly on the production line, each unit will have tests conducted before it leaves the factory, and additional tests will be performed again once the unit has been installed at the site by a factory representative.

Ductless heating and cooling equipment is made up of three basic modules and optional extensions that are field erected in a stacked configuration. By design, the equipment consists of factory-built subassemblies or modules and furnished with appropriate controls and detailed instructions to accommodate assembly and installation with applicable codes.

The lowermost module is the air base, containing one or more propeller fans lying horizontal and, if specified, optional inlet filters. The air base unit has prewired power and control panel(s). These panels contain a power disconnect switch and motor starters, control relays and temperature controls. The selector controls and toggle switches are generally located inside of the control panel or vertically mounted on the side.

The second module is the heat/cool section that may consist of a cooling portion and/or a heating portion. The cooling portion of the equipment consists of a refrigeration or chilled water heat exchanger coil. The heating portion may consist of one of the following options: (1) a certified commercial/industrial gas burner (see KXW), oil burner (see KYXY or gas-oil burner (see KYXK) with an air-to-air heat exchanger; (2) a certified electric duct heater (see KOHZ), or (3) a hot water or steam heat exchanger. The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual certifications.

Normally the third module in the stacked configuration is the air outlet module; however, an extension(s) is frequently used to raise the discharge above items that surround the unit. The air outlet module is the uppermost module of the stacked configuration and may contain optional louvers that are capable of directing air in a specific direction.

This equipment is intended to employ other equipment and components, which are separately certified. Each piece of equipment has been factory tested prior to leaving the manufacturer’s facility, and a factory-trained technician conducts the startup of each unit.

For electric-fired heaters, the minimum clearance to combustible materials is 48 in. from the front side (burner side) and 18 in. from all other sides, including the top side. Fuel-fired heaters should not be mounted directly on a combustible floor.

For electric-duct-heater-supplied units, the minimum clearance to combustible materials is 48 in. from the front side (control panel side) and 18 in. from all other sides, including the top side. Electric-duct-heater-supplied units should not be mounted directly on a combustible floor.

Unless otherwise specified in the individual certifications and product marking, the unit may be installed on combustible flooring.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at no more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically certified for use with electric space heaters provided as part of this equipment, see Control Panels, Remote, for Electric Duct Heaters (KMLW). Other certified separate assemblies referenced on the equipment marking, may also be used.

In units employing two or more motors or a motor and an electric space heater operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of the NEC. This motor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked on the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or “HACR Type” circuit breakers, the circuit is intended to be protected only by the type of protective device specified.

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is for indoor use only.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.15(B)(16) of the NEC as follows:

1. 75°C insulated conductors at the 75°C amperic.
2. 90°C insulated conductors at 75°C amperic, in which case the equipment is marked for 90°C conductors.
3. 90°C insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see INSTALLATION REQUIREMENTS (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and ELECTRICAL INSTALLATIONS under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Installation Codes

Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with appropriate National Fire Protection Association standards, including ANSI/NFPA 31, “Installation of Oil-Burning

LOOK FOR THE UL MARK ON PRODUCT
HEATING AND COOLING EQUIPMENT (LZFE)

**Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued**

Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15 (2004). “Safety Standard for Refrigeration Systems,” but are included in ANSI/ASHRAE 34 (2004), “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 33 (1996), UL’s Certification Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 (2004) for currently used refrigerants.

The refrigerants are classified A1 or A1/A by ANSI/ASHRAE 15 (2004) and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, “Refrigerants.”

**Wiring Diagrams**

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- **Ductless, Large, Open Building Heating and Cooling Equipment**

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAHZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1995, “Heating and Cooling Equipment.”

The basic standard used to investigate electric duct heaters is ANSI/UL 1996, “Electric Duct Heaters.”

The basic standard used to investigate commercial/industrial gas burners is UL 795, “Commercial/Industrial Gas Heating Equipment.”

The basic standard used to investigate oil burners is ANSI/UL 296, “Oil Burners.”

The basic standards used to investigate domestic gas-oil burners with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI/UL 60335-1, “Safety of Household and Similar Electrical Appliances, Part 1: General Requirements,” and ANSI/UL 60335-2-40, “Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.”

The basic standards used to investigate ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Certification Marks.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

A separate Certification Mark is provided on certified electric duct heaters (see Duct Heaters, Electric [KOHZ]), commercial/industrial gas burners (see Commercial/Industrial Gas Burners [KXW]), oil burners (see Oil Burners [KYX]), or gas-oil burners (see Gas-Oil Burners [KYKR]) when employed in the heating module of the ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Listing Marks.

**Retrofit Assemblies for Installation in Equipment Identified in the Manufacturer’s Installation Instructions**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

- **Control No.**

  The Classification Mark appears on the largest part of the retrofit assembly that can be readily assembled by an installer on site. Each major part of the assembly is identified by appropriate markings.

**Retrofit Assembly for Installation in Equipment Identified in the Manufacturer’s Installation Instructions**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
This category covers devices that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both, and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Heating and Cooling Equipment for Use in Hazardous Locations (LZFE)

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 995, “Heating and Cooling Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Heating and Cooling Equipment for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEATING, COOLING AND VENTILATING EQUIPMENT (LZLZ)**

**GENERAL**

This category covers fan-coil units, plenum air-terminal units, room air-terminal units, room fan heater units, and other equipment intended for comfort heating, cooling and ventilation. This equipment is rated 600 V or less.

This equipment is intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. This equipment has not been investigated from the standpoint of operation when combined with other equipment in a complete system assembled in the field, unless indicated in individual Listings for the equipment.

Where a clearance is required to be maintained between the unit or attached duct work and combustible constructions, the clearance is designated in the individual Listings, and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than “zero”) are based on tests of units with uninsulated sheet-metal ducts and plenums attached.

Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum. Unless specified otherwise in the individual Listings and product markings, the unit may be installed on combustible flooring.

Attic-type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the product marking or instructions provided with the unit.

Separately shipped steam, hot water, or refrigerant coils suitable for field installation in conjunction with heating, cooling and ventilating equipment are identified by (1) the type or model designation of the coil, and (2) the type or model designation of the heating, cooling and ventilating equipment with which it is suitable.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric space heaters provided as part of this equipment, see GENERAL PURPOSE CONTROL PANELS FOR ELECTRIC SPACE HEATING.
HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (LZZA)

This category covers accessories for use in the assembly or installation of air conditioning, heating, cooling or refrigeration equipment, and similar applications.

CONTROLS, PRIMARY SAFETY FOR USE IN HAZARDOUS LOCATIONS (LZZG)

GENERAL

This category covers primary safety controls intended for use on gas-, gas-oil- or oil-burning appliances to program and monitor the operation of the burner. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code."

The "safety switch" section of a primary safety control may be a one-piece assembly or it may consist of a control chassis and different add-on sections, such as the base or cabinet and/or plug-in timers and amplifiers, as indicated in the individual Listings.

When a safety control consists of more than one section, the combination of sections specifically Listed is intended to be employed unless otherwise specified on the appliance marking.

PRODUCT MARKINGS

Primary safety controls are marked with the company’s name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing Reports.

These products are marked with the following (or equivalent) statement: "Important: For Proper Operation Refer To Manufacturer's Installation Instructions To Determine The Primary Safety Control Sections That Comprise A Listed Primary Safety Control System."

PRODUCT CATEGORY

One of the following product identities appears on the product:

Primary Safety Control for Use in Hazardous Locations

Section of Primary Safety Control for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified location standard used to investigate products in this category is ANSI/UL 372, “Automatic Electrical Controls for House- hold and Similar Use – Part 2: Particular Requirements for Burner Ignition Systems and Components.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

HOISTWAY CABLE (MSZR)

GENERAL

This category covers hoistway cable, which is a single and multiple conductor cable for use in raceways in accordance with Article 620 of ANSI/NFPA 70, “National Electrical Code.” Insulated conductors are 20 to 14 AWG inclusive. Multiple-conductor cable consists of insulated conductors cable together with a suitable binder or sheath. The cable is rated 300 V or 600 V. The temperature rating, if so marked, is 90°C, otherwise it is 60°C. All cable complies with a vertical flame test.

PRODUCT MARKINGS

Hoistway cable is identified by the words “Hoistway Cable” printed on each insulated conductor and on the sheath, if provided.

PRODUCT IDENTIFIER

The following product identity appears on the product:

**Hoistway Cable**

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 62, “Flexible Cord and Fixture Wire.”

UL MARK

The UL symbol on the product and the Certification Mark of UL on the product attached tag, coil, reel or on the smallest unit container in which the product is packaged:

HDFPC

Heavy-duty Flexible Power Cable

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2806, “Outline of Investigation for Heavy Duty Flexible Power Cable.”

UL MARK

The UL symbol on the product and the Certification Mark of UL on the tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOISTS (MSXT)

USE AND INSTALLATION

This category covers power-operated hoists of the overhead type, intended for material-lifting service using either chain or wire rope. Power hoists may include electric or pneumatic types of operation. They are intended to be suspended from a fixed member and may include trolleys for mobility. All hoists are of the self-locking or braking type so that if the actuating force is removed, the load is retained in place. Load capacities are marked on the assemblies.

This category does not cover:

- Manual or power-operated portable hoists intended for use with scaffolds suspended by wire ropes

- Hoists for transporting people

- Manually operated chain hoists

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1340, “Hoists.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Hoist” or “Hoist.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITAL SIGNALING AND NURSE CALL ACCESSORY EQUIPMENT (NBQW)

USE AND INSTALLATION
This category covers equipment intended to be used separately or in combination to supplement a hospital nurse call signaling system. Its application is defined by the installation diagram covering the combination of the unit(s) with other units either employed for general hospital signaling use or used to form part of a hospital nurse call signaling system.

The equipment is intended to be installed in accordance with ANSI/NFPA 99, "Health Care Facilities.

Authorities Having Jurisdiction should be consulted before installation. These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres, it is so indicated in the individual certifications and marked on the device.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:
- Hospital Signaling and Nurse Call and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)
- Hospital Signaling and Nurse Call and Security Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)
- Hospital Signaling and Nurse Call Equipment

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories.

When applicable, the product identity may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Hospital Signaling and Nurse Call and Telephone Equipment).

The product identities may be abbreviated as follows:
- Type EM (for Enclosed Energy Management Equipment Subassembly)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAL).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1069, "Hospital Signaling and Nurse Call Equipment."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALLING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

**Alternate UL Mark**

**HOSPITAL SIGNALING AND NURSE CALL ACCESSORY EQUIPMENT (NBQW)**

The product name may be abbreviated as follows: The word “Type” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**
- S = Security Equipment
- F = Fire Alarm Equipment
- HN = Hospital Signaling and Nurse Call Equipment
- G = General Signaling Equipment
- EM = Enclosed Energy Management Equipment
- IT = Information Technology Equipment
- T = Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOSPITAL SIGNALING AND NURSE CALL EQUIPMENT (NBRZ)**

This category covers units employed for general hospital signaling use, or to form part of a hospital nurse call signaling system.

Where system units are identified as "supplementary," they are usually intended for connection to other manufacturer’s noncertified equipment. These certified supplementary units have been investigated for their ability to provide isolation between the other noncertified equipment and the other certified system units.

Where system interconnection wiring is supervised for open, ground, and short faults, the supervised conductors/circuits are identified in the individual certifications.

Equipment suitable for use in shower stalls is identified in the individual certifications as "Shower Station.

Equipment suitable for use in oxygen-enriched atmospheres or by patients undergoing oxygen therapy is identified as such in the individual certifications. All other equipment should not be used in oxygen-enriched atmospheres or by patients undergoing oxygen therapy.

**INSTALLATION**

This equipment is intended to be installed in exact accordance with the instructions in the manufacturer’s installation manual included with the equipment, and the requirements of ANSI/NFPA 70, “National Electrical Code,” and ANSI/NFPA 99, “Health Care Facilities.” Authorities Having Jurisdiction should be consulted before installation.

Modifications to the system in the field are limited to that described in the installation instructions for that system. Only equipment certified under a specific system name should be considered as having been tested together and found to be compatible per the installation instructions and wiring diagrams. Reference is made in the marking of the control unit to the wiring diagram showing information except when the installation wiring diagram is secured to the control unit.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres it is so indicated in the individual certifications and marked on the device.

Other equipment connected to any system unit covered under this product category is not considered to be part of the system configuration unless the equipment in question is identified by the Listee name and model number in the installation instructions and covered under this category or Hospital Signaling and Nurse Call Accessory Equipment (NBQW).

**OPERATIONS**

System units identified as “Fundamental” perform an essential/required operation whose primary function is to provide notification and/or reset/acknowledgement to a designated location. Other system units identified as “Supplementary” perform an essential/required operation whose primary function is to provide notification and/or reset/acknowledgement to a second location.

(a) Call annunciation at a nurse’s station (audible and visual)
(b) Call annunciation at the dome light
(c) Call-placed indicator on the patient station (visual), and
(d) Zone annunciation (audible and visual), and
(e) Call reset/cancellation.

Devices that perform fundamental operations are not investigated as being capable of performing supplementary operations. A supplementary device is a device that is electrically isolated and not investigated as a fundamental device. A supplementary operation is an operation that is adjunct to the fundamental operation so that the failure of such will have no effect on the fundamental operation of the nurse call system. Various system units may additionally annunciate fire alarm signals. These signals are supplementary only and these system units have not been investigated as fire-protective signaling system units.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

- Hospital Signaling and Nurse Call and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)
- Hospital Signaling and Nurse Call Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)
- Hospital Signaling and Nurse Call Equipment
- Hospital Signaling and Nurse Call Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include “and Fire Alarm,” “and General Signaling,” “and Enclosed Energy Management,” and “Information Technology” or “and Telephone,” as appropriate (e.g., Hospital Signaling and Nurse Call and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type EM (for Enclosed Energy Management Equipment) Subassembly
- Type F (for Fire Alarm Equipment) Subassembly
- Type G (for General Signaling Equipment)
- Type HN (Hospital Signaling and Nurse Call Equipment)
- Type IT (for Information Technology Equipment)
- Type S (for Security Equipment)
- Type T (for Telephone Equipment)
- Type TN (for Telephone Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 1069, “Hospital Signaling and Nurse Call Equipment.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALLING,” the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol, the words “SIGNALING,” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Hospital Signaling and Nurse Call Equipment” or “Hospital Signaling and Nurse Call Equipment Subassembly.”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Hospital Signaling and Nurse Call and Security Equipment” or “Hospital Signaling and Nurse Call and Security Subassembly.”

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Fire Alarm,” “and General Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “Hospital Signaling and Nurse Call and Telephone Equipment”).

**HYDROGEN GENERATORS (NCBD)**

**HYDROGEN GENERATORS, WATER-REACTION TYPE (NCBR)**

**USE AND INSTALLATION**

This category covers products that generate hydrogen for use as a fuel by chemical reactions with water and other chemical substances (e.g., sodium borohydride and sodium hydride). These products are intended for use in accordance with ANSI/NFPA 70, “National Electrical Code.” These products have an input rating of 600 V or less, and are intended for either portable or permanent connection to the source of supply and for installation in accordance with the manufacturer’s installation instructions. These products are intended to be installed in accordance with ANSI/NFPA 55, “Storage, Use, and Handling of Compressed Gases and Cryogenic Fluids in Portable and Stationary Containers, Cylinders, and Tanks,” ANSI/NFPA 52, “Vehicular Fuel Systems Code,” or the “International Fuel Gas Code,” as applicable.

**PRODUCT MARKINGS**

These products are marked to indicate the manufacturer’s name; model number; electrical input rating; IP rating; hydrogen output purity, temperature, capacity and pressure; and input fuel. Units are marked for residential use or nonresidential use as intended:

- **Residential** — Use in occupancies in which sleeping accommodations are provided for normal residential purposes and include all buildings designed to provide sleeping accommodations.
- **Nonresidential** — Use in locations other than residential, such as mercantile business, industrial and storage.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Hydrogen Generator, Water-reaction Type

**RELATED PRODUCTS**

This category does not cover fuel cell systems or reversible fuel cell systems, such products are covered under Stationary Fuel Cell Systems (IRG2), Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ), Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU) or Fuel Cell Modules (IRGR2).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 2264B, “Outline of Investigation for Hydrogen Generators Using Water Reaction.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Hydrogen Generator, Water-reaction Type.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-
This category covers water-turbine-powered, positive-pressure ventilators intended for use in hazardous locations.

**PRODUCT IDENTIFICATION**

One of the following product identities appears on the product:

- Positive-pressure Ventilation Fan for Use in Hazardous Locations
- Water-driven Ventilator for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positive Pressure Ventilation Fan for Use in Hazardous Locations" or "Water Driven Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual listings.

- UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

---

### HYDROMASSAGE BATHTUBS (NCHX)

#### USE AND INSTALLATION

This category covers indoor hydromassage bathtubs (also known as whirlpool baths) rated 250 V or less, for residential and commercial use, for permanent connection to the building plumbing, and intended for installation and use in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." They are intended for either permanent connection to the electrical supply or are provided from the factory with a maximum 3 ft. type SJ or equivalent service cord terminating in a grounding type attachment plug. A hydromassage bathtub may have provision for a maximum of two supply sources.

A hydromassage bathtub consists of a drainable tub, a recirculating pump and optional equipment such as lights, a heater, a control and an air blower. A bathtub may also be provided with an air-blower and no recirculating pump or with an integral shower unit.

This category also covers heaters intended to be installed after a hydromassage bathtub leaves the factory. These field-installed heaters are certified as hydromassage bathtub accessories. They are provided with markings on the heater and on the heater packaging to indicate the hydromassage bathtub models with which they are compatible.

Hydromassage bathtubs and hydromassage bathtub accessory heaters are intended to be protected by a ground-fault circuit interrupter.

**Double Insulation** — Hydromassage bathtubs may utilize double insulated pumps. These pumps are marked "Double Insulated" or "Double Insulation." Double insulated pumps intended for permanent connection to the supply may or may not have provision to terminate an equipment grounding conductor. Cord-connected double insulated pumps may be provided with a power supply cord terminating in a nongrounding type attachment plug. Double insulated pumps are not provided with a pressure wire connector for equipotential bonding.

### HYDROMASSAGE BATHTUBS (NCHX) - INSTRUCTIONS/MARKINGS

The physiological effect of using this equipment has not been determined.

**Factory Configuration Information** — Each hydromassage bathtub is provided with a marking on the wiring diagram, in the installation instructions or on a separate configuration sheet, to identify the factory-installed components of the unit. These components include pumps, controls, heaters, luminaires, and supply cords. This configuration marking and the installation instructions are intended to be available during installation and inspection.

**Field-installed Options** — Field-installed options that have been investigated and found to be suitable for addition to the unit are specified in the installation instructions. Hydromassage bathtubs intended for accessory heaters to be installed in the field are factory configured with fittings for this purpose. These bathtubs are marked "Suitable for Field-Installed Heater Accessory" and "Use only Accessory Heaters Marked for Use with This Bathtub."

**PRODUCT IDENTIFICATION**

One of the following product identities appears on the product:

- Hydromassage Bathtub
- Hydromassage Bathtub Accessory

**RELATED PRODUCTS**

Portable hydromassage equipment is covered under Personal Hygiene and Health Care Appliances (QGR2). This category does not cover hydrotherapy tubs used in health care facilities. For prefabricated steam baths and showers, see Prefabricated Assemblies, Sections and Units (QXXS). For sauna and steam shower heating equipment, see Heaters, Sauna and Steam Bath (KPYF).

Self-contained spas and hot tubs are covered under Self-contained Spas and Hot Tubs (WCZW).

For unjetted plastic bathtubs, shower stalls, and the like tested in accordance with the applicable ANSI Z124 series standards, see Plastic Plumbing Fixtures (QNNP).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AAIZ) and Plumbing and Associated Products (AAPP).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 1795, "Hydromassage Bathtubs."

The suction fittings used in these hydromassage bathtubs have been investigated with respect to body and hair entrapment to ASME/ANSI A112.19.7 (2012), "Bathtubs/Whirlpool Bathtubs with Pressure Sealed Doors." These products are intended for installation and use in accordance with the applicable model plumbing code.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

For these products which are also certified by UL to ASME/ANSI A112.19.7 (2012) and/or ASME/ANSI A112.19.15 (2012), the water retention test requirement from ASME/ANSI A112.19.7 (2012), and/or ASME/ANSI A112.19.15 (2012), "Bathtubs/Whirlpool Bathtubs with Pressure Sealed Doors." These products are intended for installation and use in accordance with the applicable model plumbing code.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydromassage Bathtub" or "Hydromassage Bathtub Accessory.

**Combination Listing/Classification Mark** — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH " where "*" is one of the texts detailed below:

1. ASME/ANSI A112.19.7 (2012)
2. WATER RETENTION TEST REQUIREMENT FROM ASME/ANSI A112.19.7 (2012)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,
### INDUSTRIAL CONTROL EQUIPMENT (NIMX)

This category covers the following devices:
- Electro-sensitive protective equipment
- Emergency stop devices
- Industrial control panels
- Industrial control switches
- Motor control centers
- Motor controllers over 1500 V
- Motor controller accessories over 1500 V
- Power circuit and motor-mounted apparatus
- Power conversion equipment (medium voltage)
- Programmable controllers
- Programmable safety controllers
- Protective relays
- Proximity switches
- Enclosure Type ratings
- Open-type equipment
- Field-wiring connections
- Accessories
- Coil ratings
- Voltage ratings
- Frequency

#### General

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery. ESPE is applied to machinery that presents a risk of personal injury, and is intended to provide protection by causing the machine to revert to a safe condition before a person can be placed in a hazardous situation.

In addition to fire and electric shock hazards, these devices have been investigated for their safety-related performance features. ESPE is designated as conforming to the requirements for Type 2, 3, or 4 ESPE as shown in the individual certification and as defined in ANSI/UL 61496-1, “Electro-Sensitive Protective Equipment, Part 1: General Requirements and Tests.”

The adequacy of the dimensions or configuration of the sensing zone and its disposition in relation to hazardous parts for any particular application has not been investigated as part of this category, nor what constitutes a hazardous state of any machine. The investigation of ESPE is restricted to the functioning of the ESPE, the means by which it monitors the condition of the machine, and how it interfaces with the machine control system.

The products covered under this category may be relevant to applications other than those for the protection of persons, for example for the protection of machinery or products from mechanical damage. In those applications additional requirements may be necessary, for example when the materials that have to be recognized by the sensing function have different properties from those of persons.
Electro-sensitive Protective Equipment (NIOZ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Active Opto-electronic Protective Devices (NPF)

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function.

The sensing function is performed by opto-electronic emitting and receiving elements detecting the interruption of optical radiations generated, within the device, by an opaque object present in the specified detection zone.

This category does not cover AOPDs employing radiation at wavelengths outside the range 400 nm to 1,500 nm.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Active Opto-electronic Protective Device
- AOPD
- Electro-sensitive Protective Equipment
- ESPE
- Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Active Opto-electronic protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) for the sensing function is covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM).

For additional information, see Electro-sensitive Protective Equipment (NIOZ), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the words “LISTED,” a control number, and the product name “Electro-sensitive Protective Equipment” (or “ESPE”) or “Active Opto-electronic Protective Device Employing Vision-based Protection Devices” (or “AOPDVBDP”), or other appropriate product name as shown in the individual Listings.

Active Opto-electronic Protective Devices Employing Vision-based Protective Devices (NIPJ)

General

This category covers electro-sensitive protective equipment (ESPE), employing vision-based protective devices (VBPDs) for the safeguarding of machinery.

The sensing function is performed by single-image sensing devices viewing one two-dimensional image against a passive pattern as the background and where the detection principle is blocking the view of the pattern.

PRODUCT IDENTITY

One of the following product identities appears on the product:
- Active Opto-electronic Protective Device Employing Vision-based Protective Devices
- AOPDVBDP
- Electro-sensitive Protective Equipment
- ESPE

RELATED PRODUCTS

Active Opto-electronic protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function is covered under Active Opto-electronic Protective Devices (NIFP).

The sensing function is performed by opto-electronic devices responsive to diffuse reflection (AOPDDR) for the sensing function.

ADDITIONAL INFORMATION

For additional information, see Electro-sensitive Protective Equipment (NIOZ), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

2015-16 GUIDE INFORMATION FOR ELECTRICAL EQUIPMENT — THE WHITE BOOK

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM) – Continued

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electro-sensitive protective equipment (ESPE) employing active opto-electronic protective devices (AOPD) for the sensing function, for the safeguarding of machinery, is covered under Active Opto-electronic Protective Devices (NIP).

Electro-sensitive protective equipment (ESPE) employing vision-based protective devices (VBDP) for the safeguarding of machinery is covered under Active Opto-electronic Protective Devices Employing Vision-based Protective Devices (NIP).

ADDITIONAL INFORMATION

For additional information, see Electro-sensitive Protective Equipment (NIOZ), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “CERTIFIED,” a control number, and the product name “Electro-Sensitive Protective Device,” “Emergency Stop Unit” or “Emergency Stop Button,” or other appropriate product name as shown in the individual Listings.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electro-Sensitive Protective Equipment” (or “ESPE”) or “Active Opto-Electronic Protective Device Responsive to Diffuse Reflection” (or “AOPDDR”), or other appropriate product name as shown in the individual Listings.

Use and Installation

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY STOP DEVICES (NISD)

GENERAL

This category covers emergency stop devices, including emergency stop units and emergency stop buttons, intended to be installed in a machine control system to perform a Category 0 or Category 1 stop function as defined in ANSI/NFPA 79, “Electrical Standard for Industrial Machinery.” The emergency stop actuator provided in these devices is a self-latching type. These devices have been investigated for their functionality in addition to fire and electric shock safety.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Emergency Stop Button

Emergency Stop Device

Emergency Stop Unit

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

ANSI/UL 508, “Industrial Control Equipment”

UL 991, “Tests for Safety-Related Controls Employing Solid-State Devices”

ANSI/NFPA 79, “Electrical Standard for Industrial Machinery”

USE AND INSTALLATION

This category covers equipment used for system isolation and rated as a single unit, which is factory-wired assemblies of isolating equipment incorporating electromechanical contactors remotely controlled and monitored to provide remote isolation status indication with a defined integrity level. This equipment is not intended to provide short-circuit current interrupting functions for motors and other related loads. This equipment is intended for use as an additional isolating means on the load side of the required supply-disconnecting device and over current protection for equipment and machinery with multiple entry points. This equipment may be employed to provide electrical isolation in order to prevent energy to motive forces (e.g., mechanical, electrical, pneumatic) to specific parts of machinery while maintaining functionality to other circuits within the same machinery. Equipment certified under this category is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure. It may also include remote mounted enclosed control and monitoring operating lockout stations which provide for remote control and status indication of the isolating electro-mechanical contactors within the main assembly and status indication (open/closed) of the isolating contactors.

RATINGS

Equipment used for system isolation and rated as a single unit is rated 1000 V ac or less and 1500 V dc or less. The power input from the main control panel is rated for the maximum load rating of connected equipment motor current (I_{m}). The supply input to the main assembly is rated in full load amperes, rating of largest motor load, voltage, number of phases, and frequency. The supply input is additionally provided with a short-circuit current rating indicating the maximum rms symmetrical amperes and voltage available at the input terminals of the main assembly panel and rated impulse withstand voltage for isolation.

ENVIRONMENTAL RATINGS

The main assembly panel enclosures and remote stations are marked with the enclosure type ratings for which they were investigated.

PRODUCT MARKINGS

Equipment used for system isolation and rated as a single unit is marked with the electrical ratings for each source of supply to the panel. The wiring diagram provided with the main assembly panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Equipment used for system isolation and rated as a single unit is provided with a complete schematic diagram as built by the manufacturer. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

YOU ARE LOOKING FOR THE UL MARK ON PRODUCT!
Equipment Used for System Isolation and Rated as a Single Unit (NSI)—Continued

The nameplate is marked with the short-circuit-current rating for each supply as follows: “Short-circuit current: ___ kA rms symmetrical, ___ V maximum,” or the equivalent.

When the required branch-circuit protection is not provided, markings are provided in the installation manual specifying the type and size of branch-circuit-protective devices that must be provided in the end use. Installation instructions indicate that field-installed interconnection wiring between remote mounted lockout stations and the main assembly equipment is isolated and segregated from all other wiring and prevented from external contact and the maximum length of the cable.

PRODUCT IDENTITY

The following product identity appears on the product:

Equipment Used for System Isolation and Rated as a Single Unit RELATED PRODUCTS

See Industrial Control Panels (NITW) and Factory Automation Equipment (GPV).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6420, “Equipment Used for System Isolation and Rated as a Single Unit.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL PANELS (NITW)

GENERAL

This category covers industrial control panels, which are factory-wired assemblies of industrial control equipment, such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit protective devices. An industrial control panel does not include the controlled loads, including motors, luminaires, heaters, or utilization equipment.

An enclosed industrial control panel is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure.

An open industrial control panel is comprised of a mounting sub-panel and all components mounted to the sub-panel, and is intended for installation into an enclosure in the field.

The category of industrial control panel enclosures. The enclosures may contain ventilation openings, observation windows, conduit fittings, environmental control devices, or maintenance luminaires. Industrial control panel enclosures are intended to house open-type industrial control panels or individual items of industrial control equipment installed in the field.

Industrial control panels are intended for installation in accordance with Article 409 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Unless otherwise marked, industrial control panels covered under this category are intended for general-use industrial applications for control of control of heating, lights, or pump loads, or a combination of these loads, and are intended for installation in accordance with Chapter 4 of the NEC.

Industrial control panels marked “Industrial Control Panel for Industrial Machinery” on the unit nameplate have been investigated to determine that they meet the requirements of ANSI/NFPA 79, “Standard Electrical for Industrial Machinery,” in addition to Article 670 of the NEC. Industrial control panels designated for control of industrial machinery may not be suitable for use with other equipment.

Industrial control panels marked “Flame Control Panel” on the unit nameplate contain controls for fossil fuel-burning equipment, such as incinerators, kilns, and drying ovens, intended for industrial applications. These control panels may additionally contain controls for other equipment, such as motors, heaters, lighting, or appliance loads. Industrial control panels are rated 600 V or less. Each power circuit output shall include the intended controlled loads, including motors, heaters, lighting, or appliance loads. Industrial control panels are marked with the electrical ratings for each power circuit output.

Industrial control panels marked “Crane Control Panel” or “Hoist Control Panel” on the unit nameplate contain controls for overhead cranes and hoists for industrial applications. These panels are intended for installation in accordance with Article 610 of the NEC and may not be suitable for use with other equipment.

Industrial control panels marked “Industrial Control Panel for Marine Use” on the unit nameplate are intended for use aboard vessels over 65 feet in length. These panels have been investigated to determine that they meet the requirements of USCG Electrical Regulations Subchapter J (46CFR, Part 110).

Industrial control panels marked “Industrial Control Panel for Refrigeration Equipment” or “Panel for Air Conditioning Equipment” on the unit nameplate contain controls for hermetic refrigerant compressor motors for industrial applications. These control panels are intended for installation in accordance with Article 440 of the NEC. Industrial control panels designated for control of refrigeration equipment may not be suitable for use with equipment other than refrigeration equipment.

Industrial control panels marked “Industrial Control Panel for Marine Use” on the unit nameplate are intended for control of permanently installed fountains or floating fountains. These control panels are intended for installation in accordance with Article 680 or 682 of the NEC.

Industrial control panels are not intended for installation in motor control center sections or units.

ENVIRONMENTAL RATINGS

Industrial control panel enclosures are marked with the enclosure type rating(s) for which they were investigated.

Enclosed industrial control panels are marked with an enclosure type rating. The type rating of the industrial control panel may differ from the rating of the basic enclosure due to the presence of components or assemblies installed through the enclosure walls by the manufacturer.

PRODUCT MARKINGS

Industrial control panels are marked with the electrical ratings for each source of supply to the panel. The panel or wiring diagram provided with the panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Industrial control panels are provided with a complete schematic diagram of the panel as built by the manufacturer. When the schematic wiring diagram includes components that are not supplied with the industrial control panel, such as remote control devices, a notation or similar means is used to identify such components. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

The nameplate of industrial control panels is marked with the short-circuit current rating for each supply as follows: “Short-circuit current: ___ kA rms symmetrical, ___ V maximum,” or the equivalent.

SPECIAL CONSIDERATIONS

These control panels are investigated for electrical fire and shock hazards only. The investigation of industrial control panels does not include investigation of the adequacy of the control and protective devices to supervise the functioning of the controlled equipment.

Special relationships and interconnections may be necessary for the proper operation of certain equipment, as noted below:

1. Control panels investigated for use in access control systems, which provide a means of regulating or controlling entry into an area, are covered under Access Control System Units (ALV).

2. Industrial control panels investigated with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SKRT).

3. Industrial control panels investigated with industrial machinery are covered under Factory Automation Equipment (GPV).

4. Flame control panels investigated with specific burner assemblies are covered under Commercial/Industrial Gas Burners (KWWI), Gas-Oil Burners (KYYB) or Oil Burners (KDAYZ).

5. Fluid-handling systems consisting of industrial control panels, pumps, valves, gauges, and piping mounted to a structural base are covered under Packaged Pumping Systems (QCZ).
Industrial Control Panels (NITW)—Continued

6. Control panels investigated with equipment intended for use as part of a semiconductor manufacturing process are covered under Analysis and Measurement Equipment (TWL8), Miscellaneous Semiconductor Manufacturing Equipment (TWT2), Power Supplies, Semiconductor (TXYV) or Semiconductor Manufacturing Equipment, Limited Production (TWWL).

7. Control panels investigated for use with flammable-liquid dispensing devices are covered under Control, Monitoring and Auxiliary Equipment (EQXX). Liquids with a flash point below 100°F are defined as flammable. Liquids with a flash point of 100°F and above are defined as combustible.

8. Control panels intended for use in motor control center sections or units are covered under Motor Control Centers (NJAV).

9. Control panels intended to energize or de-energize electrical loads to achieve the desired use of electrical power are covered under Management Equipment, Energy (PAZX).

**PRODUCT IDENTIFICATION**

One of the following product identities appears on the product:

Enclosed Industrial Control Panel
Industrial Control Panel Enclosure
Open Industrial Control Panel

**RELATED PRODUCTS**

Enclosures for general-use electrical equipment or wiring are covered under Boxes, Junction and Pull (BGUZ) or Cabinets and Cutout Boxes (CYIV).

Control panels intended for elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment are covered under Elevator Control Panels (FQPB).

Control panels with connection to sensors or initiating devices to detect and activate emergency alarms are covered under Signal System Units (UDTZ).

Equipment for gas or vapor detection and intended for connection to emergency alarm equipment is covered under Gas and Vapor Detectors and Sensors (FTAM).

Control equipment intended to supply automatic illumination, power, or both, to critical areas and equipment essential to safety of human life is covered under Emergency Lighting and Power Equipment (FTBR).

Freestanding control center sections, motor control center units and equipment intended for field installation into a motor control center are covered under Motor Control Centers (NJAV).

Control panels intended for installation in hazardous (classified) locations are covered under Control Panels and Assemblies for Use in Hazardous Locations (NNTW).

Control panels provided with intrinsically safe circuits for extension into hazardous (classified) locations are covered under Industrial Control Panels Relating to Hazardous Locations (NRRB).

Cabinets, enclosures and rack/frame systems that include components and assemblies intended to power, heat, cool or otherwise support information technology (IT), telecommunications equipment, or audio/video equipment (A/V) are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Equipment intended for the control of fuel cells, photovoltaic systems, or utility interactive systems are covered under AC Modules (QHYZ), Distributed Resource Power Systems (QIJL) or Static Inverters and Converters for Use in Independent Power Systems (QIKH).

Portable control panels containing switches, overcurrent protection, and that are cord connected via attachment plugs and receptacles for use at carnivals, circuses, fairs, exhibition halls, motion picture and television studios, theaters, construction sites and similar locations are covered under Portable Power Distribution Units and Devices (QPSH) or Portable Power Distribution Panels (QPSM).

Assemblies comprised of equipment such as circuit breakers, fuses, switches, and related accessory equipment and intended to distribute power to field installed communications equipment are covered under Power Distribution Centers for Communications Equipment (QPY).

Control panels intended for industrial application on power-operated machines intended for such uses as pressing, punching, shearing or braking operations, and additionally investigated in accordance with the Occupational Safety and Health Administration Standard Section 1910.217 are covered under Press and Other Power-operated Machine Controls and Systems (QUEQ).

Controllers intended for electric fire pumps are covered under Pump Controllers, Fire (QYZS).

Industrial control panels additionally investigated in accordance with SEMI S2 Standards are covered under Control Panels (TWRI).

Control panels containing electrical control units for use in fire-protection signaling systems are covered under Control Units, Releasing Device (SYZV), Control Units, System (UYOJ) or Smoke Control System Equipment (UUKL).

Control panels intended for use with equipment for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WWAW).

Freestanding assemblies of circuit breakers and busses for control of electric light and power circuits of equipment for installation into dead-front switchboards are covered under Switchboards, Dead-front (WEXT).

Enclosed assemblies consisting only of lengths of busbars, terminal strips and terminal blocks with provision for connecting conductors to accommodate incoming or outgoing conductors for power circuits are covered under Terminal Boxes (XCKT).

**ADDITIONAL INFORMATION**

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 508A, “Industrial Control Panels.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark on enclosed industrial control panels covers both the enclosure and the provided panel. The Certification Mark on industrial control panel enclosures covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless a Certification Mark is also present on the enclosed industrial control panel.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Open Industrial Control Panel,” “Enclosed Industrial Control Panel” or “Industrial Control Panel Enclosure.”

The “Enclosed Industrial Control Panel” Listing Mark covers both the enclosure and the provided panel. Open panels employ the “Open Industrial Control Panel” Listing Mark. The “Industrial Control Panel Enclosure” Listing Mark covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless an “Enclosed Industrial Control Panel” Listing Mark is also present.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDIUM-VOLTAGE EQUIPMENT (NJAM)**

**Motor and Resistive-load Controllers Over 1500 Volts (NJHU)**

**GENERAL**

This category covers enclosed motor controllers and resistive-load controllers having ac voltage ratings of over 1500 V, up to 15 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA or kA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73 x 10^12.

Motor controllers that are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at six times the continuous current rating of the controller at rated voltage.

Motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

These controllers may consist of a single vertical section housing one or more individual controllers, or may consist of several abutting vertical sections intended for interconnection by means of a suitable horizontal bus. These vertical sections are normally freestanding; however, a single controller or controller may be provided in a construction intended for wall mounting.

This category covers both electromechanical and solid-state-type controllers. Solid-state controllers have static switching elements for stopping.
Motor and Resistive-load Controllers Over 1500 Volts
(NJHU)—Continued

starting, and controlling the load, and are also provided with an isolating means which, when opened, provides a visible isolation gap.

ARC-RESISTANT CONTROLLERS

Controllers specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be certified as arc-resistant controllers.

Arc-resistant controllers have been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant controllers are marked with an Accessibility Type designation of Type 1, 1B, 1C, 1D-SR, 1D-SL, 1D-R, 2, 2B or 2C based on the construction.

Type 1 designates controllers with arc-resistant construction at the front only.

Type 1B designates controllers with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Type 1C designates controllers with arc-resistant construction at the front, and between compartments within the same section or adjacent sections. In Type 1C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

Types 1D-SR, 1D-SL and 1D-R designate controllers with arc-resistant construction in the front, and at the right side (SR), left side (SL) or the rear (R), respectively.

Type 2 designates controllers with arc-resistant construction at the front, sides and rear.

Type 2B designates controllers with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

Type 2C designates controllers with arc-resistant construction at the front, sides and rear, and between compartments within the same section or adjacent sections. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

REQUIREMENTS

The basic standard used to investigate electromechanical motor controller products rated 7200 V or less in this category is ANSI/UL 347, “High Voltage Industrial Control Equipment” and, for ANSI/UL 347, “Medium-Voltage AC Contactor, Controllers, and Control Centers” (5th ed.).

The basic requirements used to investigate controllers rated over 7200 V to 15 kV, and solid-state-type motor controllers rated over 1500 V to 15 kV in this category are contained in UL Subject 347B, “Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV.”

The basic requirements used to investigate solid-state-resistive-load controllers rated over 1500 V to 15 kV, are contained in UL 347C, “Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV.”

In addition to the basic standards noted above, the standard used to investigate controllers certified as “arc resistant” is IEEE C37.20.7, “IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “High Voltage Industrial Control Equipment,” “High Voltage Motor Control Equipment Section,” “Medium-voltage Industrial Control Equipment,” “Medium-voltage Motor Control Equipment Section,” “High voltage Resistive-load Controller” or “Medium-voltage Resistive-load-controller Section.”

The Listing Mark for control equipment sections also includes the designation “____ of ____” marking, where the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark).

The Listing Mark for control equipment sections also includes the designation “____ of ____” marking, where the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark).

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT MOTOR CONTROLLER

ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

RESISTIVE-LOAD CONTROLLER

ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

The Classification Mark of UL on controllers investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the following additional information:

ARC-RESISTANT MOTOR CONTROLLER

RESISTIVE-LOAD CONTROLLER

GENERAL

This category covers enclosed power conversion equipment with primary voltage ratings of 15 kV or higher for use in accordance with ANSI/NFPA 70, “National Electrical Code.” This equipment supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for medium-voltage power conversion equipment.

PRODUCT MARKINGS

Medium-voltage power conversion equipment incorporating overload protection for motors is marked to indicate the level of protection provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided.

Power Conversion Equipment, Medium Voltage
(NJIC)
Motor Controller Accessories Over 1500 Volts (NJJI)—Continued

This category covers accessories intended for field installation in motor controllers having ac voltage ratings in the range of 1801 V to 15 kV. The motor controllers are intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

**PRODUCT IDENTITY**

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

For the basic standards used to investigate products in this category is ANSI/NFPA 70, “National Electrical Code.”

The marking “Suitable For Use As Service Equipment” appears on each motor controller section optionally intended for use as a service.

Some motor control center sections incorporate neutral bonding to the enclosure. Such sections are marked “Suitable For Use As Service Equipment.”

A section marked for use at services may also be used to provide the main control and disconnecting means for a separately derived system.

**PRODUCT IDENTITY**

For information concerning overcurrent protective devices for motor controllers, see Motor Controllers (NJOT).

Motor Control Centers (NJAV)—Continued

The Listing Mark for motor control center sections also includes the marking “___ of ___.” The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the motor control center. The latter space is stamped with the total number of sections in the motor control center. The Listing Mark on the motor control center section does not cover the individual units that are installed in the section.

The splice bus for interconnecting horizontal bus of abutting vertical sections in the series is also covered by the section Listing Mark.

Each Listed motor control center unit is identified by its own Listing Mark. Only those sections and units that bear the Listing Mark are covered under UL’s Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Control Center Accessories (NJAX)

USE

This category covers accessories, such as protective devices, wiring terminals, handle extensions and other optional equipment, intended for field installation for use only with specific motor control centers and/or motor control center units. Correct combinations of motor control centers and motor control center accessories are indicated by markings on the accessory and may also be marked on the motor control center. Correct combinations of motor control center units and motor control center unit accessories are indicated by markings on both the motor control center units and the accessory.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Motor Control Center Accessory
Motor Control Center Unit Accessory

ADDITIONAL INFORMATION

For additional information, see Motor Control Centers (NJAV), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, “Motor Control Centers.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. Retrofit Motor Control Center Units Certified for Use in Specified Equipment (NJBR)—Continued

This category does not cover the servicing or rebuilding of previously installed certified motor control center units.

PRODUCT MARKINGS

In addition to other required markings, the nameplate on the retrofit motor control center unit is marked to indicate the specified motor control center section(s) for which it is intended, including the motor control center section manufacturer and type or model number.

RELATED PRODUCTS

See Motor Control Center Accessories (NJAX).

ADDITIONAL INFORMATION

For additional information, see Motor Control Centers (NJAV), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, “Motor Control Centers,” in addition to the requirements of Mechanical Subject 2727, “Outline of Investigation for Retrofit Motor Control Center Units for Use with Specified Motor Control Center Sections.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

RETROFIT MOTOR CONTROL CENTER UNIT FOR USE ONLY IN MOTOR CONTROL CENTER SECTION(S) AS DESIGNATED ON THE NAMEPLATE

Alternating UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT MOTOR CONTROL CENTER UNIT FOR USE ONLY IN MOTOR CONTROL CENTER SECTION(S) AS DESIGNATED ON THE NAMEPLATE

MOTOR CONTROLLERS (NJOT)

This category covers the following devices rated 600 V or less, and those rated 601–1500 V:

 Auxiliary devices
 Combination motor controllers
 Float- and pressure-operated motor controllers
 Magnetic motor controllers
 Manual motor controllers
 Mechanically-operated and solid-state motor controllers
 Overload relays
 Power conversion equipment

Horsepower ratings — Unless otherwise marked, motor controllers with three-phase horsepower intended for use with induction-type squirrel cage Design B, C or D motors. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and locked rotor current. For single-phase motors, the tested locked rotor current is at six times the motor full-load running current for ac ratings, and at ten times the motor full-load running current for dc ratings. For three-phase motors, the tested locked rotor current is as in Table 430.251(B) of ANSI/NFPA 70, “National Electrical Code.” For motor ratings in excess of 500 hp, the full-load current and locked-rotor currents are also specified. Some motor controllers are marked with the full-load current (FLA) and locked-rotor current (LRA) in lieu of horsepower when they are intended to control motors equivalent to 2 hp or smaller.

Overload relay tripping class — Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600% of the overload relay current-element trip rating. The designations “Class 10,” “Class 20,” and “Class 30” are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked “Class 10” and “Class 30,” respectively. Over-
Motor Controllers (NJOT) — Continued

Adjustable-speed Power Drive Systems with Integral Supply Engine Generators (NKBA)

**GENERAL**

This category covers adjustable-speed power drive systems that are supplied by stationary electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal-combustion engines. The adjustable-speed drive system supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage.

Supply connections between the stationary electrical generating equipment and the adjustable-speed power drive systems are factory installed. Adjustable-speed power drive systems with integral supply engine generators are of the enclosed type in accordance with NEC.

This equipment is rated 600 V or less and intended for use in unclassified locations in accordance with Articles 430 of ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 37, "Installation and Use of Stationary Combustion Engines and Gas Turbines."

This category does not cover adjustable-speed power drive systems with integral supply engine generators intended for use in safety-related functions (i.e., functional safety applications), mounted on trailers, or intended for temporary installation.

**PRODUCT MARKINGS**

Adjustable-speed power drive systems with integral supply engine generators incorporating overload protection for motors and not intended for use with remote or external motor overload protection are marked to indicate provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor provided.

Adjustable-speed power drive systems with integral supply engine generators are marked with output motor electrical ratings.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Adjustable-speed Power Drive System with Integral Supply Engine Generator

**RELATED PRODUCTS**

Stationary electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal-combustion engines without integral supply connections to adjustable-speed power drive systems is covered under Engine Generators (FTSR).

Adjustable-speed power drive systems without integral supply connections to stationary electrical generating equipment are covered under Power Conversion Equipment (NMMS).

**ADDITIONAL INFORMATION**

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Adjustable-Speed Power Drive System with Integral Supply Engine Generator.”

**Auxiliary Devices (NKCR)**

This category covers:

- Magnetically operated control switches (relays)
- Manually operated switches (push buttons, key-operated switches)
- Biometrically operated switches (fingerprint/optically operated switches)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damage, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Pilot lights
Push-button stations (including parts such as pilot lights and selector switches)
Electronic, thermal and magnetic overload relays
Time-delay relays
Foot-operated switches
Flow switches
Liquid-level controls
Printed wiring board assemblies incorporating switched outputs

These devices are intended for use in control circuits of magnetic motor controllers and the like. The contacts and switched outputs are marked with the voltage rating and whether they are intended for Standard Duty or Heavy Duty, or with a code designation such as A600, B600, etc. These codes represent the control circuit load that may be controlled by the device. The significance of each code is shown in the tables below. Standard Duty indicates ratings under Codes C and P; Heavy Duty indicates ratings under Codes A and N for the marked voltage rating.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NIO), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial Control Equipment” (or “Ind. Cont. Eq.”) or “Auxiliary Device” (or “Aux. Dev.”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers (NKJ)

USE AND INSTALLATION

This category covers combination motor controllers, which provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and motor overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

These products are marked “Combination Motor Controller” to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

An open-type combination motor controller is intended for factory installation in a switchboard, motor control center, industrial control panel or the like, or for field installation in an enclosure for industrial control equipment, a cabinet or a cutout box.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

PRODUCT IDENTIFY

One of the following product identities appears on the product:

Aux. Dev.
Combination Motor Controllers (NKJH)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Combination Motor Controller” (or “Comb. Mtr. Cntlr.”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Float- and Pressure-operated (NKPZ)

USE

This category covers:

Float-operated switches, including weight-operated switches
Pressure-operated switches, including vacuum-operated switches
These devices are intended for direct control of motors and/or control of general-use-type loads.

Unless otherwise marked, these devices are intended for use only with air, water, or other nonhazardous fluids.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Ind. Cont. Eq.
Industrial Control Equipment

RELATED PRODUCTS

Pressure-operated switches investigated for use in connection with automatic sprinkler or similar protective equipment are covered under Switches, Pressure (VOXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial Control Equipment” (or “Ind. Cont. Eq.”) or “Magnetic Motor Controller” (or “Mag. Mtr. Cntlr.”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Magnetic (NLDX)

GENERAL

This category covers:

Across-the-line starters
Auto-transformer starters
Combined starters and speed regulators
Reactor-type starters
Resistance-type starters
Speed regulators

Motor disconnect switch — Manual motor controllers that have been additionally investigated for use as a motor disconnect switch are marked “Suitable as Motor Disconnect.” These devices are intended to be installed on the load side of motor branch-circuit protection in accordance with Section 430.109(A)(6) of ANSI/NFPA 70, “National Electrical Code” (NEC).

Tap conductor protection — Manual motor controllers that have been additionally investigated for use as tap conductor protection within a motor group are marked “Suitable as Tap Conductor Protection in Group Installations.” These devices are intended to be installed on the load side of motor branch-circuit protection for a motor group in accordance with Section 430.53(D)(3) of the NEC.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Manual Motor Controller

Motor Controllers, Mechanically Operated and Solid-state (NMFT) – Continued

This category covers the following devices intended for across-the-line starting of motors:
- Flow-operated motor controllers
- Machine-operated motor controllers
- Soft starters
- Solid-state starters
- Solid-state reduced-voltage starters
- Solid-state speed controls
